Now we must express our deep regret that the mere desire to secure the favour of a lucrative class of customers should be allowed to override so completely every spark of public spirit in a British Company. We know it will be said that it is the business of a merchant to suit his customers, especially those customers who bring him most gain, and that in this case especially, the American companies would distance the British in the competition, if the prejudices of the American passengers were not respected. Of course it is a sound principle that, in all indifferent matters, the convenience of the consumer should be consulted, and that of the largest consumer *most* consulted. But this only applies to the arrangements for anticipating his personal wishes;—if once we are to allow that any customer, because his custom is valuable, may from private motives dictate the terms on which another is to be treated, all the fundamental justice of sound commerce is gone.

It may be said that the tastes of the majority, even if unreasonable, are more or less consulted by every commercial body,—that no conveyance company will permit smoking except under similar restrictions of isolation,—and that what a contiguous pipe is to a delicate lady, a person of colour is to a fastidious American. When thus put, it is impossible to ignore the ultimate political question, whether or not the prejudice be well or ill-grounded, a piece of narrow and disgraceful bigotry, or one founded in reality. It may be very disagreeable to some narrow-minded Englishmen to travel with Frenchmen, to some Roman Catholics to travel with Protestant heretics, to some Mahometans to travel with Christians. In such cases there is no temptation to consult private feeling,—it would not pay. And yet there is at least as much, in some cases more, ground for these prejudices than for that which the Cunard Company respect. Is English commerce to surrender all hold of the manly political axioms of the English nation simply to win more American customers? If so, we may venture to predict that it will eventually lose far more than by the sacrifice of principle it will temporarily gain. If, boldly disregarding these ignoble prejudices of caste, the Cunard Company devoted itself to improving those accommodations which it could throw open to all equally on equal terms, it would soon ride down opposition and gain respect for the thorough justice of its commercial conduct. But if it is to win its way by deferring to principles which British feeling vehemently rejects, it will either lose, in the contempt that it inspires on this side of the Atlantic, more than it gains by subserviency on the other,—or if it succeed, it will succeed only by first corrupting the *morale* of English commerce, and tainting, through its agency, the political morality of the English nation.

THE COST OF CRIME AND REFORMATORY SCHOOLS.

The Criminal Statistics for the year 1859, together with the Report of the Inspector of Reformatory Schools, are now before us, and they afford very striking evidence of the great *economy*, using the word in its very narrowest sense with exclusive relation to pecuniary cost, of Reformatory Schools. This is a point not only of the greatest practical importance at all times, but of immediate interest at present in reference to a given class of schools, not themselves reformatory, but on the edge of the reformatory class of schools,—the Ragged schools. Possibly our readers are aware that the Minutes of the Council of Education permit a grant-in-aid to Ragged schools under given conditions. The Council, however, have of late years shown a disposition to refuse this grant-in-aid to Ragged schools, at least to give the most unfavourable interpretation to their previous Minutes on the subject, of which the words will allow,—the view of the present administration being that the parliamentary vote for education is intended strictly as a grant-in-*aid* of the means of the respectable poor, and not for the helpless and dangerous classes. The Council of Education think that this vote is properly applicable only for the purpose of improving the education of those who are anxious that their children should be educated,—that it is a contribution for the sake of raising the level of the common education of the country, not a charitable donation like the poor rate, nor a tax incident to the administration of justice. The distinction is no doubt a sound and valuable one. Things which are distinct ought to be distinguished, and as it would be very objectionable to support the workhouse schools out of the education vote, so it is objectionable to support the ragged schools, which are in great measure recruited from a class lower than the workhouse schools, out of the same vote. The kind of education given, and the machinery for giving it, ought to be very different in the ordinary schools and in the pauper schools, and different again in the pauper schools and the ragged schools. The latter are, strictly speaking, either purely charitable institutions, *or* their claim on the State is founded on their efficiency in preventing crime, and in rescuing a large number from the dangerous classes who would otherwise become criminal. It seems only reasonable, therefore, that the aid they do receive from the State should be taken, like that for Reformatory Schools, from the fund applicable for the administration of justice, since it is for a purpose which anticipates and renders

needless what would be a much larger expenditure for that purpose.

But important as this distinction no doubt is, it does not affect the question whether it is or is not a clear duty and a clear act of prudence for the State to encourage and support this class of schools by all the means in its power, as one of the most effective instruments within its reach to diminish and defeat crime. We must remmember that the more completely we anticipate crime, the more efficient our machinery will be. The Ragged school, therefore, which is the anticipation of the Reformatory school, may do almost as much to prevent crime, in spite of its less powerful machinery, as the Reformatory itself. It gets hold of many children before they are branded by the law,—the other only tries to reclaim them afterwards. It is our present purpose, however, not to argue for Ragged schools directly, but simply to illustrate the saving of the Reformatories to the State, and compare the money cost of Reformatory schools with the probable saving in actual crime. We think we can show it to be morally certain that a judicious investment in reformatory schools is the greatest possible money saving to the State, as well as still more economical of that higher kind of political and social wealth in the destruction of which all criminal classes co-operate with terrible efficiency. And if this be true of reformatory schools, it will of course be true to a certain extent of what may be called the earlier stage of reformatory schools,—schools reformatory of motives and manners instead of actual habits,—in other words, schools for the Dangerous Classes.

The reformatory school system can scarcely be said to have been at work sooner than the year 1856; since then the commitments to reformatory schools have been as follows*:—

	1856.	1857.	1858.	1859.
No. of boys committed.....	455	960	700	745
No. of boys under detention	503	1,304	1,690	1,984
No. of girls committed.....	79	159	149	177
No. of girls under detention	91	231	332	442

We find from the Inspector's Report that the total cost per head for maintenance and management in the English reformatories (excluding rent of school premises, which is only paid in some of them, the land and buildings having been bought in in most cases,) has been 19*l* 5s 7d for boys, and 15*l* 6s 10d for girls, or an average of 17*l* 6s per annum for each juvenile offender. The average detention of each offender will be found to be very nearly four years, which would give a total average cost of 69*l* 4s for each inmate during his or her period of detention in a reformatory school.

Let us now look at the number of juvenile offenders (offenders under 16 years of age) committed to prison in the same years, the returns *comprehending*, it must be remembered, those sent to the reformatory schools, as it is required by law that any child sent to a reformatory should undergo a previous imprisonment of not less than 14 days.

	1856.	1857.	1858.	1859.
Boys committed.....	11,808	10,822	8,837	7,582
Girls committed	2,173	1,679	1,492	1,331

Now this large decrease in the number of juvenile offenders is certainly not entirely due to the establishment of reformatory schools, the attendance at which is by no means commensurate with the step gained:—but that it is mainly due to the generally improved provision for the education of the class which feed the criminal population of this country there can be no doubt. During the same four years the number of commitments of *adult* criminals had rather increased than diminished, the returns even of 1859 showing a very trivial decrease on those of 1856, while those of 1857 and 1858 show a decided increase. It seems certain, therefore, that the regular and striking decrease in the number of juvenile offenders, in spite of the increased efficiency of the police, during these four years, is due to some cause affecting mainly, if not exclusively, the juvenile population. And no cause except the much greater care bestowed on their education can possibly be assigned. This impression is confirmed when we examine the instructive table in the Report of the Inspector of Reformatory Schools, showing the number of offenders committed to reformatory schools from each county in connection with the number of commitments of juvenile offenders (which include the former, since every child in a reformatory is first committed to prison,) from the same county during the same four years. Thus one of the greatest per centages of decrease in commitments of juvenile offenders is in Middlesex and Surrey, where the decrease is more than 40 per cent. The reformatory agency, strictly so called, in Middlesex and Surrey, is not so actively enforced as in Lancashire,—fewer absolutely, and much fewer in proportion to the number of juvenile offenders having been committed to reformatory schools in Middlesex than in Lancashire;—but the general apparatus of educational influences brought to bear on the dangerous classes is probably no where greater than in the neighbourhood of London. In Warwickshire and Yorkshire again, the decrease is about 45 per cent., and in these counties the reformatory agency,—properly so called,—is more efficient than in almost any other county in England. On the whole, there is no manner of doubt that the marked decrease in juvenile crime is due to the equally marked increase in the apparatus for the education or reclamation of the younger population who live on the borders of civilisation and barbarism.

We have seen that the average cost to the State of each offender committed to a reformatory school is something short of 70*l* for the four years, which is the average period of detention. Of these offenders, there is positive evidence that at least 56 per cent. are permanently reclaimed, while a much larger proportion are probably in fact saved,—the remaining 44 per cent. including all those whose subsequent history after discharge is not known at all, as well as those whose career is known to be unpromising. If, then, we even add the expense (which we will suppose wasted) of each unsuccessfully treated delinquent to the expense of each one reclaimed,—and assume, what is vastly under the truth, that only 50 per cent. are really rescued from crime,—the cost to the State of such rescue, when increased by the sum wasted on the relapses, would be 140*l* for each juvenile offender saved. What would they in all probability have cost the State, had he or she been permitted to lapse into the criminal class? To this question, of course no exact answer can be returned; but as every juvenile delinquent committed to a reformatory is already a criminal, it may fairly be assumed that, if not rescued, he will become a settled member of the criminal class. It is ascertained that for every known thief living in the different districts,—and of the juvenile delinquent class almost all are thieves,—more than one crime is committed annually in that district. Moreover, for every two known thieves, there is a proportion of one annual commitment for trial: of these, three-fourths are convicted, and the average imprisonment of those convicted after trial is considerably above a year. Hence we may say that for every permanent member of the class of thieves the State loses, *besides the cost of his undetected crimes*, on an average, the expense of more than half a year's imprisonment annually, so long as he remains a member of that class. Now the total cost of maintaining and providing for every prisoner in prison is on an average from 24*l* to 30*l* annually,—so that within the term of professional criminals' ordinary life, they must on the average cost the State as much in *mere imprisonment* as it would have cost to reform them. When we remember how very small a portion of their real cost to the community this is,—how much they cost the State in the mere loss of property caused by this class of crimes, whether detected or undetected,—how much again the systematic idleness of an unproductive life takes from the average gains of the community,—and when we add the cost of prosecutions, and of those more trifling crimes, punished summarily, which are the offshoots of professional crime, it may safely be assumed that a reclaimed offender will, in the very first year of honest labour, practically repay the State the full cost of his reclamation.

If, then, the reformatory schools are so great a gain to the State, all schools which in any degree anticipate the work of reformatory schools at an earlier stage as it were, are still more so. Suppose, as there seems some reason to suppose, that by these or similar agencies some two or three thousand have been saved from the class of juvenile delinquents, the gain to the State and the community must have been enormous. There is abundant evidence on the face of the Criminal Statistics to show that no item among the expenses of law and justice are half so effective, as those which are due to the prevention of crime by educational agencies, or its extermination in its earliest stage.

* This table is taken from the Criminal Statistics, and is made out for the year ending with 29th September in each year. The numbers are not the same as those in the Reformatory School Report, which apply to the year ending with 31st December in each year.

THE REVENUE.

The public accounts whic we publish elsewhere show the commencement of the effects of this year's Budget, but it is too soon to form any opinion of what the ultimate effects of it will be. The consequences of so many changes as Mr Gladstone this year proposed cannot be shown except after a considerable interval. This is especially the case with the favourable consequences. The reduction of duty lessens the revenue immediately, but the compensating and mitigating increase of consumption does not begin for some time. Such a trade as the wine trade requires new preparations by the merchants, and new knowledge among the consumers, before its course can be altered.

The increase and decrease in the quarter ended 30th June, 1860, as compared with the corresponding period of 1859, is as follows:—

	Increase. £	Decrease. £
Customs	...	375,641
Excise	169,000	...
Stamps	107,660	...
Taxes	5,000	...
Property Tax	306,710	...
Post-office	40,000	...
Crown Lands	1,500	...
Miscellaneous	72,689	...
Totals	702,559	375,641
Net Increase	326,918	

The increase in the income tax requires no remark. The augmentation in the Excise is in part derived from Mr Gladstone's stringent method of dealing with the maltsters. He has required them to pay at once an amount of duty which would under the old system have been paid at two different times. The increase which is thus obtained is not, therefore, a permanent addition to our revenue. We shall not have it in the corresponding quarter of next year. The paper trade, on the other hand, has been in great confusion, and the receipts from it have been diminished.

A decrease in the Customs as compared with 1859 must now be a regular feature in our accounts. Mr Gladstone took off—

	£
By the changes consequent on French treaty..	1,737,000
Other changes	1,034,000
	2,771,000

It is true that some of these changes are not yet in full operation, and that they are to be in part compensated by increased consumption, and by new charges. Still, after such extensive changes, a diminution of the yield of the Customs as compared with 1859 must be anticipated.

Under these circumstances, the elastic nature of this branch of revenue should be carefully attended to. The Commissioners of Customs give the following table in the Report they have just issued:—

An Account of the Gross Receipt of Customs Duties in the United Kingdom in the Year 1859, compared with the Receipt in the preceding Year 1858; specifying the Amount collected upon each of the principal Articles: also, of the aggregate Amount paid for Drawbacks, Allowances on Goods over-entered, &c.; and of the aggregate Net Receipt of Customs Duties in the same Years.

	Year ended 31st December. 1858. £	1859. £	Increase or Decrease in the Year 1859, as compared with the Year 1858. Increase. £	Decrease. £
Butter	95,489...	104,587...	9,098...	...
Cheese	44,369...	49,656...	5,287...	...
Coffee	442,120...	431,361...	...	10,759
Corn	586,783...	532,900...	...	53,883
Currants	302,819...	379,913...	77,094...	...
Raisins	129,411...	151,776...	22,365...	...
Silk manufactures	270,540...	307,561...	37,021...	...
Spirits—Rum	1,396,288...	1,460,171...	63,883...	...
— Brandy	830,500...	980,271...	149,771...	...
Sugar	6,051,684...	6,123,476...	71,792...	...
— Molasses	200,418...	158,638...	...	41,780
Tea	5,186,170...	5,408,924...	222,754...	...
Tobacco and snuff	5,454,214...	5,573,463...	119,249...	...
Wine	1,827,111...	1,982,302...	155,191...	...
Wood—Sawn or split	362,571...	384,692...	22,121...	...
— Not sawn or split	202,499...	230,158...	27,659...	...
Other articles (taken collectively)	772,866...	805,216...	32,350...	...
Aggregate gross receipt	24,155,852...	25,065,065...	909,213...	...
Deduct drawbacks and repayments	339,707...	360,741...	21,034...	...
Aggregate net receipt	23,816,145...	24,704,321...	888,179...	...

It appears from this table that the Customs were augmenting at the rate of nearly 1,000,000*l* a year, and that two articles, tea and tobacco, which are not affected by the recent changes, produced more than one-third of that increase. If the country continues prosperous, and we have a good harvest as we may now hope to have, it is only reasonable to expect that the natural elasticity of the revenue will come not ineffectually to Mr Gladstone's aid.

THE TREATY WITH FRANCE.

There has been issued the copy of a second additional article of the Treaty of Commerce concluded between Her Majesty and the Emperor of the French, signed at Paris on the 27th ult. This article is as follows:—

It having been found impossible to conclude the negotiation of the arrangement which is to fix, according to paragraph 1 of Article XIII. of the Treaty of Commerce concluded between Great Britain and France, the 23d of January last, the rate of the specific duties to be levied on British merchandise imported into France, within the period stipulated by the said article, the high contracting parties have considered it advisable, in the interest of the respective commerce of the two countries, to make a fresh arrangement with a view to ensure the gradual execution of the aforesaid Treaty within the periods fixed by the same.

In consequence whereof, the undersigned, invested with full powers on the part of Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, on one side, and of His Majesty the Emperor of the French, on the other, have agreed upon the following articles:—

1. Instead of a single convention establishing the specific duties to be paid by British merchandise imported into France, three separate conventions shall be successively concluded; the first of which shall comprise bar and pig iron, steel and worked metals, machines, tools and mechanical instruments of all sorts; the second, yarns and manufactures in flax and hemp; the third, all other articles of British production and manufacture enumerated in Article 1 of the Treaty of the 23rd of January.

2. These conventions shall be negotiated, concluded, and ratified in such a manner as to come into force with respect to the articles to which they apply, at each of the periods fixed by Article XV. of the Treaty of which they will form the complement. Nevertheless the last of these conventions shall be concluded and ratified before the 1st of November next.

The present additional article shall have the same force and validity as if it had been inserted in the Treaty of Commerce of the 23rd of January last. It shall be ratified, and the ratifications thereof shall be exchanged at Paris within four days at latest from the date of its signature.

In witness whereof, the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Paris, this twenty-seventh day of June, in the year of our Lord eighteen hundred and sixty. (L.S.) Cowley. (L.S.) E. Thouvenel.

The ratifications were exchanged on the 1st of this month.

OUTWARD AND HOMEWARD FREIGHTS.

The annexed return shows the outward freights from England, and the homeward freights from the principal ports abroad, and in our dependencies.

Outwards.

Coals—From Tyne and Wales.

Agriculture.

FRENCH AGRICULTURAL SHOW.

The national agricultural exhibition held at Paris last week proved one of the most successful which has yet taken place in France. It is justly remarked by the reporter of the *North British Agriculturist*, whose editor always pays intelligent attention to the husbandry of our neighbours, that "the French Government is bestowing more attention on agricultural improvement than any Government in Europe." Now, although we do not in this country require or permit the interference of the Government in such matters as agricultural exhibitions as is the custom in France, it is worthy of note, that whilst our own Government is striving to divert the attention of the people from the arts of peace to those of war, the French Government is pursuing a directly contrary policy, and loses no opportunity of encouraging agriculture and the other pursuits of peaceful industry. In France the Government is expected to guide the people in such matters, and we find under its influence that extraordinary progress has been made in agriculture, both as regards the improvement of live stock, and the use of farming implements and machinery.

The show took place in the Palais de l'Industrie and the adjoining grounds. Of cattle there were all the French breeds, together with Shorthorns, Ayrshires, Dutch and Swiss breeds, with a few Herefords and white cattle of Hungary. The French breeds exhibited considerable improvement over those of previous exhibitions, and there is no doubt that several of those breeds, if treated with the same care in management and selection as our own are, would ere long rank little behind our cattle. Crossing the French breeds with the Shorthorn, as is practised to a large extent, had produced very considerable improvement, but what is of more importance to the general improvement of their stock is, that French agriculturists have become aware that the true course of improvement of the native breeds lies in selection and feeding. "The most apparent defect in the majority of French breeds is the absence of that square and symmetrical form which distinguishes the improved breeds of Great Britain. Some of the breeds, such as the Normand, &c., may be considered as too large-framed, and the bony structure out of proportion to the muscular system," and there is an absence of that uniformity of type which is the result of a lengthened period of selection. But "the Normand breed, while excellent for the dairy, is also valuable for the production of beef. The majority of these are brindled, with more or less white. In the males, extra size is the feature; in the females, this defect is less apparent. The rich pastures of Normandy support this large-framed breed, and the quality of the herbage doubtless accounts for the size which many of the animals attain." Those who have seen this breed will readily admit that, with careful selection, it might be rendered one of the finest breeds of cattle in the world. Next in importance and numbers was the Flamande breed. These cattle are much used in several departments of the North-east of France, and are mainly a dairy stock. The colour is commonly brown or red, with white markings about the face, legs, and belly. "They are large-framed, with bones projecting, narrow-chested and flat-sided. It is stated this breed is very liable to be affected with pleuro-pneumonia. This can be accounted for from the formation of the chest, from the vascular system being highly developed, and from the mode in which they are kept." The bulls are coarse, but "the cows in milk have soft silky hair, with the fineness of touch which distinguishes the well-bred Shorthorn." Here, too, it is obvious materials for improvement by selection and better management are not wanting.

The Charolaise cattle, however, form the grand feature of the cattle department. "In numbers and quality the Charolaise excel all other breeds. Several of the animals are little behind good Shorthorns in symmetry, softness of touch, and general appearance. Those which have been most distinguished by the jury could be placed in the classes for Shorthorns at any show in England, and the general public would fail in discovering that the Charolaise were not high-bred Shorthorns. The likeness of several of the animals shown to pure Shorthorns would surprise most breeders. With stronger constitutions than the Shorthorns, the Charolaise may yet be experimented with to import more stamina to the Shorthorn. It may be expected, also, that the Shorthorn will be used to impart the valuable quality of early maturity to the Charolaise. By using bulls of white colour, descended from white animals, the colour of the Charolaise would be perpetuated in the cross. Pure white or cream-coloured, with the absence of brown or black markings, the Charolaise is a beautiful animal. Besides this colour, they are generally symmetrical in form, and possess a

quiet, docile expression, indicative of aptitude to fatten. There is, however, a counterbalancing defect in hardness of touch, with wiry, short, close hair." This is said to be a quality necessary to protect them against the insects which abound in their native districts. As working cattle they are said to be valuable, but are indifferent milkers. They are slow in coming to maturity, and are not quick feeders.

It would be tedious to enumerate the numerous other native breeds shown, as well as Dutch, Swiss, Ayrshires, Shorthorns, and Shorthorn cross. A Shorthorn bull shown by the Emperor would have done credit to any show in this country.

Of sheep, Merino occupied the first place; and of the various crosses, those with the Southdowns were the best.

The horses shown were chiefly those for fast work, consisting largely of horses of English blood and Arabs. The Normand horse was a principal feature of the horse show. "Resembling the Yorkshire trotting horse in form, with much of the style of the old English hunter," these horses possess many valuable qualities. "With the defect of an apparent coarseness in the form of the head, they are very suitable for the saddle and for harness. Showing action with considerable speed in the trot, Normand horses should command high prices in London." There were many useful horses by English and Arab sires out of Normand mares. Asses of large size from the South of France were shown. So valuable are they for producing mules for Spain, that they sell for very high prices.

Some of the French-made agricultural machinery is thought to be improvements on similar work of our own makers. Steam is the chief moving power, and great interest is felt in this department of the show. As many as 40,000 persons daily visited the exhibition. Amongst the articles exhibited was a "manure containing nitrogen taken direct from the atmosphere. This discovery," says the reporter, "if found to be generally practicable in the manufacturing of manures, will change the whole system, and render the importation of nitrogenous guano less necessary." Of the value of such an invention, if perfected, there can be no doubt.

Literature.

DES IDEES NAPOLEONIENNES. Par LOUIS NAPOLEON BONAPARTE. Avec un avertissement de l'Editeur. Londres: W. Jeffs. 1860.

NAPOLEONIC IDEAS, &c. Translated by JAMES A. DORR. New York: D. Appleton and Co. 1859.

THE first of these works is a very opportune republication of the celebrated programme of a now celebrated man. In form, paper, and type, the volume is unexceptionable, and its contents are most appropriate reading for every "British Volunteer." The original preface is dated from "Carlton terrace, July, 1839,"—an address and date which recall a very different state of things from the present, and one which will justify the comparative indifference with which the *brochure* was received at the time. Written as it was between the dates of Louis Napoleon's two unsuccessful attempts at Strasbourg and Boulogne, we may take it for granted that the sentiments of this pamphlet are those which the future Emperor meant to carry into practice if either of these attempts had turned out differently, and it is not making a very large demand on our credulity to presume that they are such as still animate to a considerable extent his Imperial policy. If so, their perusal becomes matter of more serious interest than could be called forth by any study of character alone. Here we may say we have the ruling ideas of a mind which exercises a most important and daily increasing influence on the destinies of Europe. Here, perhaps, we may find some clue to that mysterious and inscrutable character which has baffled the comprehension of the wise heads of the world. At any rate, the pamphlet may well claim attention, if simply as a political curiosity.

One great drawback to the perusal of French works of this description by English readers is their excessive sententiousness. The most commonplace reflections are presented in so stately and so epigrammatic a form, that we are apt at first to be imposed upon, and to conclude that we are indebted to the writer for the first enunciation of some important principle. When we find out our mistake, we soon get tired of this would-be philosophical parading of trifles, and become almost too impatient to do justice to the actual amount of originality in the writer's ideas. "Louis Napoleon" commences after the fashion of his countrymen, his first chapter being entitled "Of Governments in General," and treating, according to its heading, of "the general movement of progress," the "form of governments," and "their mission." As to Monarchy, he remarks:—"Far be it from me to enter on a discussion on the merits of Monarchy, or of Republicanism. I leave to philosophers and metaphysicians the task of solving a problem which, *a priori*, I should pronounce insoluble. I cannot see in Monarchy either the principle of right divine, or those numerous vices which they would attribute to it. I can only see in an hereditary system a guarantee for the integrity of a country," and he proceeds to justify this by a comparison between the histories of Germany and France, which started together from one and the same point, and led to such different results. The only two modern nations which he considers to have fulfilled their mission are the United States of America and Russia. "Government" he pronounces not to be a mere "necessary evil," but the beneficent moving-power of the whole social organisation. The *rôle* of France is "to throw into all treaties her sword of Brennus in the interests of civilisation." Napoleon the First saw at once that his *rôle* was to be the "testamentary executor of the revolution of 1789." The Emperor brought back old forms, but based his government on fresh and vigorous interests. As Cæsar kept up the forms of a Republic, so Napoleon restored those of the Monarchy, because they were integral parts of the national life. The destruction of a French aristocracy rendered necessary the guarantee for order of hereditary rulers. The author comments at some length on the administrative system of his uncle in all its branches, and then proceeds to consider his political organisation, which he pronounces at the outset to have been only provisional, to be perfected on the conclusion of peace. The constitution of the Empire was based on the principles, first of "civil equality, corresponding to the democratic principle," and next of a "gradation of offices" (hierarchy), "corresponding to the principles of order and stability." The Emperor always claimed for himself the title of the chief representative of the people, which has been arrogated exclusively to the Legislative Chamber. He was accused of being a despot, but he always, says his apologist, went through the preliminary form of consulting others, and did not condemn without a hearing. Where it was necessary to act beyond the law, he had founded a body whose function it was to legalise such proceedings.

More interesting to Englishmen than these transparent fallacies, are the succeeding chapters, the first of which treats of "Foreign Affairs." There are three systems in accordance with which the foreign policy of France might be conducted. First, a blind and impassioned policy, which would throw down the gauntlet to Europe and dethrone all Kings. Secondly, one which would maintain peace by purchasing the friendship of Sovereigns at the expense of the honour and interests of the country. The third system would offer frankly the alliance of France to all Governments which are willing to join with her in common interests. This last is the Napoleonic system. "The greatest difficulty for Napoleon was not to conquer, but to dispose of his conquests. As Sovereign of France, it was his duty to turn them to the advantage of that country; as a great man, it was his duty to regard them in the interests of Europe." That is to say, his conquests ought to be employed to further the immediate interests of war, at the same time that they supplied him with the means of securing a general pacification. The provinces then incorporated with France were only so many media of exchange, which were held in reserve against a general pacification. This the writer illustrates by expressions of the first Napoleon, such as "Illyria is an advanced sentinel at the gates of Vienna. I shall give it back hereafter in exchange for Gallicia." "War is no wish of mine; I am satisfied with the Rhine." His brothers were set up on their several thrones for the sole purpose of provisionally keeping alive the idea of an independent existence, and preventing the growth of the idea that all were to be absorbed into one Empire. After describing the wars into which Napoleon was forced against his wishes and policy, and the disaster of Moscow, with the first abdication, the writer continues:—"There is yet another lightning flash, and then comes Waterloo. At that word every Frenchman's voice is choked and is exchanged for tears—tears for the vanquished—tears for the victors, who will regret sooner or later having overthrown the only man who had made himself the mediator between two hostile ages. All our wars have come from England. She was never willing to listen to any proposal of peace. Did she believe then that he wished for her destruction? Never had he such a thought. He only made reprisals. The Emperor esteemed the English people, and he would have made any sacrifice to obtain peace,—any sacrifice, that is to say, which would not have compromised his honour." After attributing the failure of these efforts at peace to the mutual misunderstanding of the two nations, the writer goes on to say that "the rivalry of England enabled Napoleon for a moment to realise against that power a European combination similar to that which Henry IV. would have accomplished against Spain, in concert with Elizabeth, if the hand of an assassin had not deprived France and Europe of this great Monarch":—a curious slip in the writer's historical memory, seeing that Henry IV. survived Elizabeth by seven years. The object of all the Emperor's wars was, our author tells us, to substitute among the nations of Europe "*l'état social*" for "*l'état de nature*"; and it was the realisation of this great idea that England and Russia opposed. Then follows an exposition of the Napoleonic policy, which we cannot do better than give in the writer's own words, quoting from the creditably-executed translation of Mr Dorr:—

The policy of the Emperor consisted in founding a solid European association, by causing his system to rest upon complete nationalities, and upon general interests fairly satisfied. If fortune had not deserted him, he would have held in his hands all the means necessary for the new constitution of Europe: he had kept in reserve whole countries, of which he could dispose in order to attain his end. Dutch, Romans, Piedmontese, inhabitants of Bremen and of Hamburg, all of you who have been astonished to find yourselves Frenchmen, you will return to the atmosphere of na-

tionality which suits your antecedents and your position ; and France, in surrendering the rights which victory gave her over you, still acts for her own proper interests ; for her interests can never be separated from those of civilised nations. In order to cement the European association, the Emperor, to use his own words, would have caused to be adopted a European code, and a European court of cassation, to correct all errors, as the Court of Cassation in France corrects the errors of French tribunals. He would have founded a European Institute to animate, direct, and unite all the learned associations of Europe. Uniformity of coins and money, weights and measures, and uniformity in legislation, would have been secured by his powerful intervention.

Then was to have been inaugurated liberty of discussion in the Chambers, followed by liberty of the Press :—

Friends of liberty (exclaims the writer), who have rejoiced at the downfall of Napoleon, your error has been fatal! How many tedious years must pass, how many struggles and sacrifices must be gone through and suffered, before you will arrive again at the point to which Napoleon had advanced you!

Such are the Napoleonic Ideas.

LETTERS OF ALEXANDER VON HUMBOLDT, written between the Years 1827 and 1858, to Varnhagen von Ense. Together with Extracts from Varnhagen's Diaries, and Letters from Varnhagen and Others to Humboldt. Authorised Translation from the German, with Explanatory Notes and a full Index of Names. London : Trübner and Co. 1860.

THIS is a book on which we have no hesitation in pronouncing an unqualified condemnation. Whatever excuse the editress may frame for herself from the language of Humboldt, which to us seems by no means to justify her, she has committed a breach of good manners and good faith towards others utterly unpardonable ; and has done a great wrong to one whose very frailties she should have honoured. We have here no interesting collection of thoughtful letters on affairs of moment, but the confidential notes of a busy man to a friend whom he was in the habit of meeting daily ; notes containing here and there fragments of Court scandal, which decency should have prevented Mdlle von Assing from publishing in the lifetime of many to whom they refer, enclosing now and then a valuable autograph, rarely an interesting letter, from some eminent correspondent ; notes brief and fragmentary, full of barely intelligible allusions and jests of which the key is lost ; venting often the ill-temper of the moment, the malice of political antipathy, or the querulousness of age, against men of whom several are now living ; exactly the sort of notes which a wise man would have burned, and which a gentleman would not have published. One of the few enclosures which really merit preservation, and which could be given to the world without indecorum, is a letter from Prince Metternich on receipt of a copy of Humboldt's "Cosmos," which elicited from the veteran diplomatist the following expression of religious opinion :—

Personne n'est plus appellé que je le suis, à rendre justice à votre remarque relative à l'influence que le christianisme a exercée sur les sciences naturelles, comme sur l'humanité entière et dès lors sur toutes les sciences, car cette remarque s'est depuis longtemps fait jour en moi. Elle est d'une complète justesse et sa cause générale et simple comme le sont toutes les vérités, celles apperçues comme celles inapperçues, circonstances qui ne changent rien à l'essence d'une vérité. Le faux mène au faux, comme le vrai conduit au vrai. Aussi longtemps que l'esprit s'est maintenu dans le faux, dans la sphère la plus élevée que l'esprit de l'homme puisse atteindre, les conséquences de ce triste état, ont dû réagir dans toutes les directions morales, intellectuelles et sociales et opposer à leur développement dans la droite voie, un obstacle insurmontable. *La bonne nouvelle* une fois annoncée, la position a dû changer. Ce n'est pas en *divinisant les effets*, que ceux-ci ont pu être suivis dans les voies de la vérité ; leur recherche est restée circonscrite dans la spéculation abstraite des philosophes et dans la verve des poètes. *La cause* une fois mise à couvert, les cœurs se sont mis en repos et les esprits se sont ouverts. Ceux-ci sont longtemps encore restés enveloppés dans les brouillards de la sceptique païenne quand enfin la philosophie scolastique a été débordée par la science expérimentale. Trouvez-vous mon raisonnement juste? Si vous le trouvez, je ne suis pas en doute que vous ne partagiez ma crainte, que les progrès scientifiques véritables courent le risque d'être arrêtés par des esprits trop ambitieux, qui veulent remoter des effets à la cause, et qui trouvant la route coupée par les limites infranchissables que Dieu a posées à l'intelligence humaine, ne pouvant avancer, se replient sur eux-mêmes et retournent à la stupidité du paganisme en cherchant la cause dans les effets!

THE WASHINGTONS: a Tale of a Country Parish in the 17th Century, based on Authentic Documents. By JOHN NASSAU SIMPKINSON, Rector of Brington, Northants. Longman and Co.

THE circumstances which led to the writing of the tale before us are detailed by the author in his preface. It seems that when he became rector of Brington, he hit upon the capital idea of taking as the subject of some parish lectures the "Parish Register." We can well understand the interest which was excited by the lectures among the parishioners, and the amount of traditionary illustration which it was the means of bringing to remembrance and preserving. The Rector himself was naturally most interested in a great historical name which appeared on the books—that of Washington. "The last English ancestor of George Washington lies buried in Brington church, and I knew," to use the author's own words, "that the emigrant himself, that ancestor's second son, must have passed much of his boyhood in the village, and probably in a house which particular reasons had led me to fix upon. Anxious to pursue these researches further, I obtained leave, through the late Earl Spencer's kindness, to examine all documents that could be found at Althorp, and soon fell in with a collection of household and account books belonging to the 17th century, which invited a careful examination. In some respects these books proved a little disappointing, for, owing to an unfortunate hiatus in the series, they did not throw all the light I had hoped for upon the history of the Washingtons ; but they showed a still more intimate connection than I had suspected to exist between that family and the Lords Spencer, while they revealed with extraordinary minuteness the state of things then prevailing at Althorp. And, between the Parish Register on the one hand, with its exact array of names, its stern life facts, and its curious incidental notices,—and the Account Books on the other, with all their varied details of every-day life,—such a vivid picture of the period rose before me, that I was induced to work it out, and even venture to believe that others may judge it to possess a more than local interest."

The volume which Mr Simpkinson—acting on this impulse—has here produced, is one which will certainly recommend itself favourably to public notice, not only by the intrinsic interest attaching to the subject of the ancestors of the great Washington, but also by the agreeable manner in which it is written, and the curious illustrations of English local life at a most interesting period of our history which it abundantly supplies. The author has, indeed, voluntarily abdicated his chance of making a telling and artistic story out of his materials, by rigidly confining himself within the limits of ascertained facts, or such immediate inferences from them as would be allowable in the most sober and trustworthy history. That under such conditions he has contrived to impart any amount of interest to the characters of his tale, we cannot but think speaks well for his mental powers, and gives us some idea of what he would have been capable of under other than such a strait-waistcoat discipline. There are several little glimpses of country doings, which may be literally close approximations to the actual every-day life of the seventeenth century, and at any rate have about them that colouring of truthfulness which is requisite to make the reader feel himself *en rapport* with the scenes at which he is invited to be mentally present. There is, of course, the cardinal fault that the interest thus inspired is necessarily fragmentary. Those amplifications of facts on which the sustained spirit of the tale as a work of fiction necessarily mainly depends, are so interrupted by intervals during which the author is driven to have recourse to a meagre and dim historical connecting outline, that the plot of the story has almost lost its hold on our attention before the incidents expand again into a life-like picture. Amy Washington and Philip Curtis, about whose characters and incipient courtship much of the interest of the earlier part of the story turns, are merely distantly referred to in the latter part of the tale. John Washington has been lost so long to our familiar knowledge of him, that when he reappears as "Sir John" in the closing scene, we are disposed to receive him nearly as coldly as did his old friend "Will" or "Shall"—we forget which of them it actually was. The stern demands of a faithful adherence to dates summon worthy Master Campian to sleep with his fathers at an epoch in the story too early for the proper development of his character with reference to the other *personæ dramatis* in the vicissitudes of their lives and dispositions, though—may we whisper it—not before we are a *little* tired of the excellent man's most excellent observations. A general negative is a dangerous thing in these days of historical resuscitation, but we must confess we doubt the *vrai-semblance* of his portrait to that of any *clergyman* of the seventeenth century. The broad-church platform of the nineteenth century was never, we are afraid, so faithfully prefigured in that age of narrow, though intense and deep thought, and of dogmatic party feeling. Such approximation to it as we find in the more generous and wider spirits of the age bore still a peculiar religious colouring of its own, which strikes us at once as something foreign to the modes of thought of the present day, and which recalls the peculiar circumstances of a distant century. We cannot recognise this "flavour of his age" in the portrait of Mr Campian, even if it should be the fact that it reproduces to a considerable extent the more advanced opinions of an actual individual of that day. Robert Lord Spencer is scarcely attempted to be made an actual *dramatis persona*, and the dinner at Althorp is encumbered, and to our taste spoilt, by an elaborate attempt to expound the culinary *gnosis* of the seventeenth century. The hawking scene, however, is capitally described, and is by far the best passage of the fictitious narrative. The character of Master Robert Washington is lightly and pleasantly touched ; and the self-sufficient idler of the parish, the cleverish "do-no-good" "Body," is a distinct and well-drawn sketch. The incipient Puritanism of Amy falls rather dull upon us when we find it so easily quenched by one spiritual admonition and exposition from her pastor ; and we cannot help feeling that here was a good idea for a character which has been almost capriciously abandoned. The worthy lady who was distressed at the new version of the Bible, strikes us as rather too artificial and too palpably a vehicle for a suggestion to existing theological prejudices, to be accepted as a real person. On the whole, the author seems to us to be better able to hit upon general impressions of character than to work them out satisfactorily in their details. But of this, as we have said already, it

is not easy to judge under the rule to which he has subjected himself. Certainly he has a power of leaving a generally agreeable impression on the mind—perhaps rather from his delineation of the "surroundings" of character than of character itself. And this leads us to express our regret that the author did not give fuller play to this faculty of his mind by embodying his materials in some sauntering handbook of the antiquities of his parish and its vicinity, in which descriptions of natural scenery and the changes which time has wrought in it, and in the life of those who successively resided within it, might at the author's own free discretion have been mingled with record gleanings, plausible and presumptive inferences and suggestions, and traditionary stories. Such a plan would, we think, have given his book most of that popular interest which he sought to secure by its present fictitious form, and would have recommended itself as a more natural and authentic mode of conveying to the minds of others the impressions of a buried century which he himself derived from his researches.

But with every drawback, the English as well as the Transatlantic reader has to thank Mr Simpkinson for an agreeable volume, singularly unpretending in its tone, and which leaves on the mind of the reader the not very common impression that the author has only failed in producing something more interesting still, from not doing justice, in the plan which he has selected, to his own natural powers.

THE DIARY OF A POOR YOUNG GENTLEWOMAN. Translated from the German by M. ANNA CHILDS. Trübner and Co., 60 Paternoster row.

IN this "Diary of a Poor Young Gentlewoman" the often-repeated tale of a governess's trials and rewards is somewhat freshened up by transplantation into a foreign soil. German ways of thinking and modes of life are different from our own; and the people of Braunsdorf Castle are sufficiently unlike the inhabitants of an English country mansion to amuse the reader with a show of novelty, and lead him to overlook its absence in the very slight texture of a story that repeats with tolerable exactness the stereotyped incidents of novels of its class. We need scarcely enumerate what these are. Every one who has any acquaintance with the life of governesses in novels, is aware that on her first start in life she is encountered by the envy and jealousy of ladies old and young, is consoled by the intense devotion of some younger pupils, fascinates by degrees all the gentlemen with whom she comes in contact, is perfectly faultless in her demeanour towards them, and receives the long-foreseen offer of marriage from the hero, the very handsomest and most charming of all her admirers, just when the alarmed jealousy of the lady-mother has brought matters to a crisis by her abrupt dismissal. All this is written in many novels; what more particularly distinguishes the present one is the tone of simple piety, the healthy and pleasant spirit that pervades it. It must, we think, have been this, more than any other merit it possesses, that attracted the notice of the translator, and induced her to put into graceful English a pleasant little story of no great power.

THE NATIONAL REVIEW. No. XXI. July, 1860. London: Chapman and Hall.

THE new number of the "National Review" does not, perhaps, contain any one article greatly conspicuous above all the rest in excellence, and which, uniting the highest order of permanent interest in the subject with the highest order of ability in the treatment, is destined to live far beyond the ephemeral term which is "the threescore years and ten" of periodical literature. The articles of the current number, taken together, seem however to us to reach a higher level of general interest and ability than the average even of this Review. The number, on the whole, is unusually attractive. We do not give it the purest literary praise, but we pass upon it the most valuable eulogium, from the bookselling point of view, when we say that it contains scarcely an article which will repel,—which will not invite and secure the attention of the intelligent "general reader."

The political essays in the number are the sixth, in answer to the question "What is the House of Lords?", and the eleventh, which bears the (to the Chancellor of the Exchequer) interesting title "Mr Gladstone." The former is a remarkably able and thoughtful contribution, not only to the discussion of a pending constitutional problem, but to political science generally. The writer has, what is not very common among political writers, a truthful apprehension and firm grasp of social facts; he clearly understands the living forces and whole working of representative government in general, and of English society in particular. He has, in short, to begin with, the "appropriate conceptions" (to use Dr Whewell's phrase), from the absence of which so many ingenious minds go astray in every science, and most of all in the moral and political sciences. The functions of a second Chamber, which even those advanced liberals who stop short of the theoretic democracy of the French revolutionary type admit to be a necessity of a stable representative government, are thus described by the essayist:—

> It is the distinctive office of a second House to be the flywheel of the Constitution; to balance and regulate the political movement of the nation; to guard against the haste, the passionate impulses, and the corruption of the Lower House; to secure a calm and careful examination of new measures; to procure revision and reconsideration when popular excitement, or false hopes, or dazzling but shallow rhetoric, has for the moment misled the Commons; to test by temporary resistance the sincerity and strength of the will which demands a change; to make legislation take its stand on the good sense and ultimate judgment, instead of the momentary desire of the country; and to give continuity and stability to the general policy of the nation. Often, but for the interposition of the Lords, the true voice of the country could not have been distinguished from the noisy clamours of popular orators, or the more insidious demands of selfish constituencies.

The writer then shows, with great force and clearness, that "the special qualifications of British peers for these duties," consist "in the very qualities against which invective is most indignantly levelled,—their hereditary descent and their territorial wealth." *Why*, our readers may find out by consulting the article. We can only spare room for an extract, in which the essayist combats a theory which has often found supporters among men able and highly educated in everything but political science, and utterly unapt for that, in favour of an exclusive Life-Peerage, recruited entirely from men personally distinguished in different ways. "Celebrities and Abilities, distinguished politicians and professional men, retired merchants and manufacturers, would be still weaker" [than a second Chamber framed after the model of the American Senate] "for the purpose required."

> As soon as they reversed the votes of the Commons, and set themselves in array against a strong feeling in the country,—and this is the one great object of a second House,—their individual characters, their lives, their several claims to deference, would be severely criticised; popular indignation would concentrate itself on each of them personally. It would be asked with passion why such men should be suffered to defeat measures eagerly desired by the country? Why should not other men of better sense be added to them at once, to outvote their folly? In other words, they would be at once prevented from performing the specific function of a House of Review. Their resistance would be ascribed to their faults and crochets. They would be quickly alarmed and afraid to act; and would end by becoming worthless.

The above passage contains only a few out of the very many points of interest and importance insisted on in the valuable paper from which we have extracted it.

Not less able is the second political article,—that on Mr Gladstone. The writer disentangles with remarkable keenness of analysis and justness of discrimination, and brings out in a pointed emphatic style, the intellectual and moral qualities which form the strength and weakness of the Chancellor of the Exchequer's very complicated character. The defect of the article lies in the apparent inability of the author vividly to pourtray as a whole, that which he understands in its parts. The living man is not set before us. In this respect, and in popular breadth of treatment, the paper is inferior to the article on Mr Bright, which attracted so much attention, in the last number of this Review. Mr Bright's, it is true, is a much less complex character, and much easier to depict in a few strong decisive strokes, than that of his new ally. The critic of Mr Gladstone compares his mode of treatment to "vivisection." But in vivisection, however skilful the operator, and instructive his demonstration, the animal not unfrequently dies on the table. We cannot say that the "minute analysis" of Mr Gladstone's *National Reviewer* forms any exception to the hackneyed couplet:—

> Following life in creatures we dissect,
> We lose it, at the moment we detect,

We must speak very briefly of the remaining articles of the Review. A charming paper on "Horace" will interest and delight even those who know Horace only through Mr Theodore Martin and less able interpreters, and, of course, will much more interest those to whom the writer's hints recall the exquisite lines and turns of thought which remain in every memory that has once been familiar with the lyric flow in which the poet, whose just boast it was

> Princeps Æolium carmen ad Italos
> Deduxisse modos,

clothed his light and cheerful wisdom, his wit and sentiment, and his knowledge of human nature and life. An essay on the poetic remains of one of the ablest contributors to the "National Review," —the late William Caldwell Roscoe,—though evidently tinged by affectionate remembrance of the subject of the criticism,—*desiderio tam cari capitis*, from which, however, *pudor* and *modus* are not absent, —does no more than justice to the real excellence, for which it will prepare, we hope, more general recognition. The very readable article on "Edmond About" displays something of the piquant vivacity of style which, according to all the rules of fitness, any criticism of M. About is bound to manifest. The essay on "The Natural History of the Ancients" gracefully blends the acquirements of the well-read scholar with those of the accomplished naturalist. The two last published volumes of Mr Froude's History form the text of an article "On the Protestant and Catholic Revolt from the Middle-Scheme of Henry VIII.," which, in its thorough knowledge and reflective appreciation of the moving forces of the English character and the social life of England under the Tudors, bears traces of having proceeded from the hand of a writer who has himself made contributions of acknowledged value to the illustration of another period of English history. There is

a very interesting as well as curious paper on a chapter in the history of superstition too little known in this country, "The Devils of Loudun," a phemomenon in the 17th century, which is the exact analogue of the spirit-rappings of the present day, though followed by tragic results which, we are happy to say, are nearly impossible in the present day, at least in France or any equally civilised country. The story is told with spirit, the evidence analysed with acuteness, and the application to present phenomena is pointed with ability. The articles on "Michelet's Life of Richelieu," and on "De Biran's Pensées," though containing interesting matter in the way of narration and extract, are hardly up to the level of the subjects or to the usual standard of the "National." The general excellence of the number, however, would bear larger deductions than the comparative inferiority of these two articles requires us to make.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

By articles 2 and 15 of the Treaty of Commerce between France and England, British coal and coke imported into this country from the 1st of the present month only pay 15c the 100 kilogrammes (1f 50c the ton) with, in addition, the two *decimes*. The duty heretofore has been 30c for coal and 45c for coke, not including the *deux decimes*. Of course the reduction in the duty cannot fail, and at a very early date too, to cause a large increase in the import.

A meeting of the members of the "Association for Commercial Reform," which was established some time back, was held in this city a few evenings ago, with Count de Kergorlay in the chair, for the purpose of taking into consideration the question whether in the treaty with England specific or *ad valorem* duties were more desirable. Previous to the meeting, circulars were sent to all parts of France requesting opinions on the matter, and it was announced that the replies to these circulars were, generally speaking, favourable to *ad valorem* duties. In the discussion which ensued, and which was very interesting, specific duties were defended on the ground that they are easily levied, that they do not require Customs officers to attain the difficult art of estimating the value of articles, &c.; and the arguments in favour of *ad valorem* duties were to the effect that it is not possible to establish a satisfactory scale of specific duties, inasmuch as such duties being imposed by weight or measure, would cause the superior qualities of most articles, and particularly wool and cotton fabrics, to pay little, and the coarser qualities to pay heavily; in other words, would keep out those qualities which are most required for the poorer classes of the populationr It was also asserted that the difficulty of fixing the value of goods by Customs officers is more imaginary than real, and, in support of this, it was stated that in Belgium and the United States the *ad valorem* system is in force, and works easily and well. It was likewise contended that that system is preferable for an exporting country, and, as a proof, it was stated that whilst France only sends into Holland, where specific duties are levied, the higher classes of luxurious articles, she sends to Belgium, under the *ad valorem* system, articles of general consumption as well as those of luxury. On the whole, the meeting appeared to think the arguments in favour of *ad valorem* duties the stronger of the two; but admitted that for certain articles, such as grain and flour, specific duties presented no inconvenience. Eventually a resolution was adopted to the effect that the Association was of opinion that "whenever *ad valorem* duties could be established, they were preferable to specific duties."

The Superior Council of Commerce, which is now sitting, charged with the mission of transforming the *ad valorem* duties of the English treaty into specific duties, will doubtless pay to this resolution the attention to which it is entitled, coming as it does from eminent practical men. This Council is continuing to sit three times a week. In a previous letter I stated that it had commenced the investigation respecting machinery. It has since completed that part of the inquiry, and also all others relative to metals. In regard to machinery, it examined a considerable number of witnesses, and among them several Englishmen—Mr Platt, of Oldham; and Messrs Spencer, Singleton, Walton, Robinson, and Johnson, of Manchester. The council is now occupied with the investigation relative to textile manufactures.

In a previous letter it was stated that the manufacturers of cotton fabrics of the departments of the Aisne, the Nord, and the Somme were petitioning for the prompt admission of English cotton yarn at a low rate of duty. Their petition, which is addressed to the Minister of Commerce, is now published in the newspapers. It states that their manufactures will suffer greatly if, as proposed by the treaty with England, the introduction of English cotton yarn at the new duties shall not take place sooner than the 1st June, 1861. During the last five months they say they have, from the want of a sufficient sale for their productions, been obliged to reduce the wages of their workmen as much as 25 per cent., and the reduction they declare would have been greater if the demand for agricultural labour at this season had not, by affording the men other employment, enabled them to reduce their production. The gravity of this situation, they assert, is aggravated by the dearness of cotton yarn, which, strange to say, has not been reduced by the abolition of the import duty on cotton. They point out that, as they occupy twenty or thirty times more hands than cotton-spinners, their interests ought to excite attention in preference to those of the latter. In another petition addressed to the Emperor, they pray that the importation of English yarn may be allowed from October next, instead of June, 1861,—October being the month in which agricultural labours, in which their men partly engage, cease; and they pray that the duty thereon may not exceed 5 per cent. *ad valorem*, which, they say, is ample protection to the French spinners. Similar petitions have reached the Government from other parts of France. It is to be hoped that their very reasonable prayer will be granted.

The subscription opened by the Bank of France for the bonds of the railway companies has been closed. The result has not been officially stated, but there is no doubt that the amount subscribed very greatly exceeds that which was required;—some accounts say by as much as 4,000,000*l* sterling, others even by 6,000,000*l*. The bonds for which there was the greatest demand were those of the Orleans and Mediterranean Companies.

The loan which the Municipality of Paris requires does not, as had been anticipated, fall far short of 6,000,000*l* sterling. A bill has been presented to the Legislative Body, authorising the issue of 287,618 bonds, at 500f each,—that is, 143,809,000f.

It appears from an official table just published, that the number of bankruptcies in Paris in the course of the year ending June 30 was 1,157. It also appears that the number of commercial companies, either in shares or ordinary partnerships, formed in the year ending that day, was 1,320, which was 157 less than in the preceding year; and that the amount of the nominal capital was 139,600,000f, which was about 5,000,000f less than that of last year.

According to an official return, the quantity of beetroot sugar made in this country, in the first nine months of the present "campaign," that is, up to the 31st May, was 125,363 tons, which was about 4,000 tons less than for the corresponding period of the preceding campaign. The stock on the 31st May was 60,000 tons.

A report on the Savings Bank of Paris shows that last year the deposits amounted to 26,496,948f, and the withdrawals to 26,612,062f. This large amount of withdrawals is ascribed to the desire to invest in the Government loan of last year.

The Government has very wisely abolished nearly all the vexatious Customs regulations and formalities heretofore imposed on merchandise passing through France in transit; and in consequence such merchandise will enjoy very nearly the same facilities as that imported for consumption.

M. J. E. Horn has recently published his *Annuaire du Credit International pour* 1860. It contains a prodigious mass of information relative to the budgets, debts, banks, and great mercantile companies of every country of Europe and America. As a work of reference, it is invaluable to merchants and others who have to occupy themselves with such matters.

A few months back a company in shares, called the Franco-Belgian Sugar Refinery, failed unexpectedly at Marseilles. The manager of it has just been tried by the Tribunal of Correctional Police of that city for irregularities in the execution of his duties, and has been condemned to a year's imprisonment. In the course of the trial it was stated that he made the shareholders believe that the Company was extraordinarily prosperous, and that he distributed to them as "dividend" in the space of less than nineteen months 133f per share, and also as "interest" (French companies make a distinction between dividends and interest) two sums of 2½ per cent. each. Yet not only did the Company never make any profit, but in those nineteen months all the capital, consisting of 5,000,000f (200,000*l*), was devoured, and debts to a large amount were incurred, for which there are not assets sufficient to pay one-half. The Company was warmly supported by the leading merchants of Marseilles, and it was they who held its shares. Strange it is that shrewd men of business so often allow themselves to be victimised in this way.

The Bourse has not been very active during the week, and was closed altogether on Tuesday, on account of the interment of Prince Jerome. To-day, however, prices have advanced, owing

chiefly to the receipt of some favourable news from Naples. The following are the quotations:—

The following is an account of the markets:—

Flour.—Owing to the favourable change in the weather, the market at *Paris* presents a downward tendency. Yesterday, prices varied from 65f to 69f the sack of 159 kilogs for the superior sorts, and 50f to 56f for the second. Four marks were 64f to 64f 50c for the current month; 65f 50c and 66f for August, and 67f for September.

Wheat, at *Paris*, again declined; choice being 39f 50c to 40f the sack of 120 kilogs; good, 38f to 39f; ordinary, 36f to 37f. Of the provincial markets, only 10 present a rise, whilst in 119 falls varying from 7c to 2f the hectolitre have taken place.

Cotton.—At *Havre*, in the week ending Friday, business was active; the sales having been 9,540 bales. Prices remained unchanged; low New Orleans being 86f the 50 kilogs; and very ordinary ditto, 95f. The arrivals were 9,189 bales. This week, sales have been numerous; and yesterday low New Orleans remained at 86f.

Coffee.—At *Havre*, in the week ending Friday, business was not active: 750 sacks Hayti, for delivery in September, went at 79f to 80f the 50 kilogs in bond; 210 Gonaïves disposable, 83f; 500 sacks Rio not washed, 75f 50c; 400 washed, 87f 50c; 20 casks Jamaica (from London), 112f 50c duty paid; 143 sacks Ceylon triage, 108f 50c; and a small lot of Guadeloupe, 131f 50c. The arrivals were very numerous, exceeding 35,000 sacks. This week, sales have not been large: French West India has been at 130f to 135f duty paid. At *Nantes*, last week, 431 sacks Porto Cabello went at prices varying from 92f to 99f 50c. The arrivals were insignificant. There have been no sales this week, except of some damaged Port-au-Prince and Reunion. At *Bordeaux*, last week, numerous orders were received, but holders were very reserved and little was done: a small lot of San Yago went at 97f 50c; a small one of Laguayra at 70f; and 292 sacks Costa Rica at 117f 50c duty paid. One of the weekly reports says:—"The quotations which now prevail are very favourable to importers, and large profits may be realised." Nothing done this week.

Sugar.—The demand at *Havre*, in the week ending Friday, was regular: upwards of 2,300 casks French West India went at 47f 50c to 48f 50c the 50 kilogs duty paid; 2,749 bales Reunion at 52f to 53f; and 2,100 bales ditto "gros grain," 57f. Some lots of damaged Havana were also sold. The arrivals were nearly 4,000 casks French West India. This week, sales have been very numerous: French West India at 47f 50c to 48f; ditto usine, 56f; Reunion, 52f; Mauritius, 56f 50c. At *Bordeaux*, last week, a fair amount of business was done, and brokers fixed the closing prices at 46f to 46f 75c for French West India, 51f for Reunion duty paid. This week, French West India has been at 46f 50c. At *Nantes*, last week, the sales were very large: 48,390 sacks Reunion, on an average, at 51f to 51f 50c; a lot of Mauritius, 52f 50c; and 2,130 casks French West India, 48f 25c to 48f 75c. This week, a large lot of Reunion has been sold at 51f and 51f 50c; one of Nossi Bey at 47f 50c; and a small one of French West India at 48f 50c.

Indigo.—At *Havre*, last week, 48 cases Bengal were sold at established prices. The arrivals were only 7 cases from England. This week, 10 cases Bengal have been sold at 11f 60c the half-kilogramme. At *Bordeaux*, last week, 75 cases Bengal went at 12f 50c to 26f the kilogramme, 15 Kurpah at 10f to 21f, 2 Madras at 6f to 13f 50c. Nothing done this week.

Hides.—The demand at *Havre*, in the week ending Friday, was somewhat more animated. 240 Buenos Ayres salted went at 85f the 50 kilogs duty paid; 800 Rio Grande dry, 120f; 200 Rio Janeiro salted, 66f; 422 Rio Hacha dry, 92f 50c to 94f; 131 Lima dry, 82f 50c to 85f; 1,695 Valparaiso salted, 72f to 72f 50c; 1,920 New Orleans ditto, 50f; and 1,636 New York ditto, 52f to 52f 50c. The arrivals exceeded 23,000. This week, sales have been active: New Orleans salted, 52f 50c; Minas dry, 124f; Irish salted, 50f; La Plata salted, 81f 50c; Buenos Ayres dry, 152f 50c; ditto (cow) 80f; Rio salted, 66f; Pernambuco, 67f.

Wool.—At *Havre*, in the week ending Friday, the demand was active. 445 bales La Plata, unwashed, 1f 50c to 3f 25c the kilogramme; 84 bales Russia, washed, 8f 60c; 111 bales South Sea, 90c to 1f 40c; 26 bales sheepskin La Plata, unwashed, 1f 5c to 2f 30c. The arrivals exceeded 1,000 bales. This week, there have been numerous sales: Buenos Ayres, unwashed, at 2f 10c.

Tallow.—No sales were made at *Havre* last week, and the arrivals were only 4 casks. This week, nothing has been done. At *Paris*, yesterday, the 100 kilogrammes were 144f 75c—a fall of 75c on last week's prices.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. first quality was 95f to 97f the hectolitre; Montpellier, 86 deg., 140f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 135f; beetroot, first quality, 100f.

Geneva, July 2.

A number of gentlemen of Lausanne have convoked an "International Congress" in that city on the 25th of this month, to deliberate on the question of the best system of taxation. According to them, the economic changes which have lately been made in England, France, Belgium, and other countries, indicate that a radical revision of imposts cannot much longer be delayed, and they propose to prepare the way for it by discussion. The idea of these Lausanne gentlemen is, no doubt, a good one; but it is to be regretted that they have fixed their Congress at so early a date, and also that they have not selected some more central town than Lausanne for the meeting of it. *Apropos* of taxation, I may state that several cantons of this country have adopted the income tax, and some even a tax on capital.

Amsterdam, June 30.

From an official report just published, it appears that Dutch mercantile shipping is in a declining state. Thus in 1854 the share it took in the total imports and exports of Holland was 46¼ per cent.; but in 1856 it was only 46; 1857, 45; 1858 and 1859, not more than 42. Foreign shipping, on the contrary, which was 53½ per cent. for the whole in 1854, was 55 per cent. in 1857, and 58 in 1858 and 1859. The number of Dutch vessels which entered in the latter year was 3,200 of 580,000 tons; the number which sailed, 2,300 of 438,000 tons.

COMMERCIAL AND MISCELLANEOUS NEWS.

Subjoined is the usual monthly summary of the foreign commerce of New York:—

	1858. dols		1859. dols		1860. dols
Foreign Imports for May.					
Entered for consumption	6,574,612	.....	15,222,311	.....	10,515,411
Entered for warehousing	2,626,078	.....	4,746,614	.....	4,436,660
Free goods	1,928,573	.....	3,461,285	.....	1,845,020
Specie and bullion	324,540	.....	122,436	.....	96,060

Total exports	36,516,465	.....	52,116,082	.....	47,311,052
Total exports, exclusive of specie	24,750,680	.....	26,415,091	.....	34,573,380

The annexed report shows the state of the Albany lumber market to the 13th inst.:—The sales for the week have been limited, though shipments in the early part of the week were large. The receipts of pine, white wood, walnut, and ash have increased, but there has been a falling off in spruce and hemlock. No freshets have as yet occurred in Northern New York, and many of the mills have been shut down for want of logs. The assortment of lumber in the market is now good, the only articles scarce being seasoned pine tally boards and one-and-a-quarter-inch measured pine. The receipts by the Erie and Champlain canals, during the first week in June, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1856	5083182	1744	390	...
1857	7886683	1250	2970	2404442
1858	12205396	415	2500	3602000
1859	9619000	3413	...	10774000
1860	13915000	5566	2500	1477020

The figures for the four days in the second week, do not indicate a large increase over the first week, and will not probably much exceed fourteen millions of boards and scantling. The receipts by the Erie and Champlain canals, from the opening of navigation to June 8, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1856	25808732	6742	390	1215200
1857	26124102	8744	2970	3555242
1858	65144157	7792	36535	15016300
1859	58390100	17726	34607	37309700
1860	56950600	9796	5500	12629547

Advices from Rio reach to the 8th ult. The receipts of coffee had again proved very scanty, and the previous month's prices had been fully and firmly maintained. Stock in the interior, of the old crop, was nearly exhausted, while receipts of new coffee from the Serra Abaixo had been very circumscribed, and were not likely to increase materially before July. Stock, 70,000 bags. The sales in all from May 8 to June 6 amounted to 47,040 bags, of which 13,500 were for the United States, 5,000 for

California, 9,300 for the Channel, 17,500 for the Mediterranean, and 1,700 for the Cape of Good Hope. Clearances in May:—40,386 bags for the United States (against 23,533 in May, 1859); 13,150 for the Channel; 11,763 for Havre; 1,821 for Christiansand; 3,968 for Marseilles; 2,868 for Contantinople; 2,178 for Syria; 1,570 for Corfu; 1,708 for Portugal; 1,963 for the Cape of Good Hope; 2,266 for the River Plate; in all, 83,541 bags. The sales of sugar during the month comprised 660 cases of Campos, at 5.600 to 5.800 redondo, 5.400 to 5.500 batido, and 4.200 to 4.600 mascavo; and 11,920 bags from the North at 5.400 to 6.400 for white, and 3.800 to 4.400 for brown, the latter description remaining on the decline. The bulk of these sales was for home use. There remained in stock 1,000 cases Campos, and 493 cases, 28,000 bags and barrels Pernams. Inferior hides sold at 320 reis, and good qualities at 380 to 400. From Bahia there is no news of importance. Prices of sugar had receded, sales of browns having been effected at 2,700 reis and 2,600 reis per arroba; no sales of whites had transpired. Supplies of coffee from the interior only amounted to a few hundred bags, which were disposed of at 5,800 reis to 6,000 reis. Cocoa continued without alteration; a small lot or two sold at 5,000 reis to 5,200 reis. No sales of cotton were reported; a lot had been given in payment at 8,300 reis, a price not afterwards obtainable. Holders of hides demanded higher prices, and stocks were increasing; no sales were heard of.

Messrs Pixley, Abell, and Langley have issued the following statements of the London imports and exports of bullion during the six months ending June 30:—

Imports. Places.	Total. 1860. £		Total. 1859. £
Belgium	572,800	.....	1,737,540
France	2,328,100	.....	5,948,900
Hanse Towns	380,540	.....	1,013,500

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending June 2, 1860, compared with the previous month:—

	May 5, 1860.	June 2, 1860.	Increase.	Decrease.
	£	£	£	£
Bank of England	22286561	21539196	...	747365
Private Banks	3565964	3498670	...	67294
Joint Stock Banks	3120771	3058538	...	62233
Total in England	28973196	28096394	...	876802
Scotland	4003321	4572068	570746	...
Ireland	7013067	6829677	...	183390
United Kingdom	39987585	39498019	...	489536

And, as compared with the month ending the 4th of June, 1859, the above return shows an increase of 296,942*l* in the circulation of notes in England, and an increase of 417,758*l* in the circulation of the United Kingdom. On comparing the above with the fixed issues of the several banks, the following is the state of the circulation:—The English private banks are below their fixed issue 906,365*l*, the English joint stock banks are below their fixed issue 243,819*l*,—total below fixed issue in England 1,150,184*l*; the Scotch banks are above their fixed issue 1,822,797*l*, the Irish banks are above their fixed issue 475,183*l*. The average stock of bullion held by the Bank of England in both departments during the month ending the 30th of May was 15,659,246*l*, being an increase of 951,191*l* as compared with the previous month, and a decrease of 1,693,216*l* when compared with the same period last year. The following are the amounts of specie held by the Scotch and Irish banks during the month ending the 2nd of June:—Gold and silver held by the Scotch banks, 2,612,731*l*; gold and silver held by the Irish banks, 2,435,687*l*; total, 5,048,418*l*; being a decrease of 48,510*l* as compared with the previous return, and an increase of 239,933*l* when compared with the corresponding period last year.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 4th day of July, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	30,227,150	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	15,752,150
		Silver Bullion	...
	30,227,150		30,227,150

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,817,883
Rest	3,500,175	Other Securities	21,670,170
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	8,209,369	Notes	8,265,485
Other Deposits	13,748,126	Gold and Silver Coin	744,780
Seven Day and other Bills	687,648		
	40,498,318		40,498,318

Dated the 5th July, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,649,313	Securities	31,410,053
Public Deposits	8,209,369	Coin and Bullion	16,496,930
Private Deposits	13,748,126		
	44,606,808		47,906,983

The balance of Assets above Liabilities being 3,300,175*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

AN INCREASE of Circulation of	£1,031,194
A DECREASE of Public Deposits of	1,117,944
AN INCREASE of Other Deposits of	1,394,426
AN INCREASE of Government Securities of	3,777
AN INCREASE of Other Securities of	1,406,635
A DECREASE of Bullion of	55,100
AN INCREASE of Rest of	47,636
A DECREASE of Reserve of	1,056,985

The above return proves that the pressure for discounts during the week must have been very considerable, the increase in other securities being 1,406,635*l*.

It also shows by the large increase of other deposits that the bankers and others must have been strengthening their reserves.

We presume that the decrease of 1,117,944*l* in public deposits must have arisen from the usual Government payments of salaries, &c.

The most unfavourable portion of the return is the decrease of 1,056,985*l* in the reserve of notes, but this has doubtless been an exceptional week in consequence of the heavy failures.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,706,905	£ 20,147,145	£ 21,346,297	£ 22,228,440	£ 22,649,313
Public deposits	9,564,513	7,863,550	6,991,930	9,436,986	8,209,369
Other deposits	9,273,018	9,658,611	13,155,625	13,581,531	13,748,126
Government securities	14,374,908	10,320,065	10,692,417	11,780,035	9,817,883
Other securities	11,913,840	19,315,201	16,685,445	18,682,565	21,670,170
Reserve of notes & coin	11,412,048	6,523,321	11,345,887	11,088,655	9,067,250
Coin and bullion	16,868,608	11,516,856	17,408,657	18,088,865	16,496,930
Bank rate of discount	2½ p. c.	6 p. c.	3 p. c.	3 p. c.	4 p. c.
Price of Consols	96¾ xd	92¼ xd	95¼ xd	94⅝ xd	95⅛ xd
Average price of wheat	40s 11d	63s 5d	42s 8d	40s 4d	58s 5d
Exchange on Paris (short)	25 40 45	25 22½ 30	25 2½ 10	25 7½ 15	25 12½ 20
— Amsterdam ditto	12 1½ 2	11 17 18	11 13 ...	11 12 12½	11 14½ 15
— Hamburg (3 months)	13 12 12½	13 8½ 8¾	13 6½ 7	13 8½ 8¾	13 5 5½

In 1850, there was great ease in the money market. Exchequer Bills were as high as 70s prem., and Consols at 97.

In 1857, the imports of bullion from Australia and the United States were very large. The exports, however, were on an extensive scale. In the open market, the best bills were discounted somewhat more freely, at 6 per cent. The value of money at Hamburg had advanced to 7½. Home securities were heavy, and Consols marked 92⅜ ¼.

In 1858, the rate of discount in the open market was 2½ per cent., but gold was flowing out of the Bank. Rumours of a Turkish Loan were in circulation. Political and commercial affairs were alike quiet.

In 1859, great excitement prevailed in consequence of the conclusion of an armistice between France and Austria. Consols rose from 93¼ to 94¾, and the rate of discount was ½ per cent. lower in Lombard street than at the Bank,—the prospect of immediate peace overriding the fact of supplemental Army and Navy estimates to the extent of 3¼ millions.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 2,670,822*l*; in 1857, a deficiency of 9,656,590*l*; in 1858, a deficiency of 3,529,800*l*; and in 1859, a deficiency of 5,101,034*l*. In 1860, the deficiency is 7,922,050*l*.

DISCOUNT AND MONEY MARKET.—The rate of money in the discount market to-day is 4 per cent. An active demand has existed during the week at rather above this rate, but the supply has been abundant.

The applications for discount to the Bank of England during the week have been very heavy. This is generally the case when any uneasiness prevails as to credit. The lamentable failures in the leather trade, to which we have alluded elsewhere, have caused the withdrawal of bills from the general discount market, amounting probably to 2,500,000*l*, which, from their pressure for renewal from time to time, have been weighing like an incubus on it. The consequence is, that although confidence for the time is checked, and a great pressure for discount has been made on the Bank of England, there is little doubt that, unless some fresh cause of uneasiness arises, money will be abundant after payment of the dividends, and that the rate charged in the discount market will be below that of the Bank of England.

About 50,000*l* in gold have been sold to the Bank of England, but the great bulk of the arrivals last week have been purchased for the Continent.

The following are the rates of discount in

	Bank rate. Per cent.		Open market. Per cent.
London	4		4
Paris	3½		3
Amsterdam	3		2½
Brussels	3		3
Berlin	4		4
Frankfort	2		1½
Hamburg	No Bank rate		1½
New York	...		4½ to 5
St Petersburg	5		5 to 6
Vienna	5		4½

It will be seen that, with exception of St Petersburg, New York, and Vienna, the rate of money is higher in England than in the other marts.

The rate of money on the Stock Exchange has been 3½ to 4 per cent., and very abundant..

ENGLISH FUNDS.—The fluctuations in the English funds have been very trifling this week. The lowest price of 3 per Cent. Consols for the opening has been 93¼ to ⅜, and the highest 93½ to ⅝; and they close to-day at 93⅜ to ½. The market is steady, and the weather having a more settled appearance gives confidence.

The rate of money on Government securities has been 3½ to 4 per cent., and from account to account 3 to 3¼ per cent. There is a little more demand to-day, probably because Consols are open for private transfer, and applications to a small extent have been made to the Bank of England at 4 per cent. There have been no operations on the part of the Government broker. Exchequer Bills have been steady at par to 4 prem.

We drew attention to great disparity in price which has existed for some time past between Consols and New 3 per Cents. and Reduced. It was at that time nearly 1 per cent. in favour of Consols, since that period it has diminished to ¾; but there is still that profit to be obtained by the investor, or those who have Consols, by the exchange of them for Reduced or New 3 per Cents. It is a remarkable circumstance that such a disparity in price should exist, when it is considered there are 367,000,000*l* of Consols as compared with 215,000,000*l* of New Three per Cents., and 114,000,000*l* of 3 per Cents. Reduced.

The money interest in the City are anxiously waiting to know the requirements of the Chancellor of the Exchequer. Against the 3,800,000*l* required for China, they consider he has about 1,300,000*l* in the shape of the paper duty, and 1,500,000*l* of uninvested Savings Banks money.

FOREIGN FUNDS.—It appears that 5,000,000*l* sterling has been subscribed for here and on the Continent for the New Russian 4½ per Cent. Loan of 8,000,000*l*, but from the few applications that were made for the loan in the City, surprise has been expressed at the amount subscribed for. Possibly the Russian Government, as in the late 3 per Cent. Loan, have taken a portion of it themselves.

We subjoin Messrs Baring's circular on the subject:—

Messrs Baring Brothers and Co. beg to announce that the allotments of the New Russian Loan of 8,000,000*l* sterling, amount in all, conjointly in London and Amsterdam, to 5,000,000*l*, and also to state that they and Messrs Hope and Co. have orders from his Excellency the Minister of Finance of the Imperial Government of Russia to engage not to sell or offer for sale any portion of the remaining 3,000,000*l* stock before January 1, 1861, nor, after that period, to sell any part of the above-mentioned stock at prices or conditions below those of the subscription purchase.

The price of the New Loan is par to ¼ prem., but very few transactions take place.

On the 29th June an Imperial ukase appeared in St Petersburg, decreeing an issue of Treasury Bonds to the extent of 15,000,000*l* of silver roubles, or about 2,500, 00*l* sterling, bearing interest at the rate of 5 per cent. per annum.

The market for foreign stocks has, generally speaking, been very firm, and we have to record an improvement in French Rentes, Sardinian, Spanish, and Turkish Bonds. Spanish Deferred have been negotiated at 40¼, and 3 per Cents. 49 to ½. French Rentes close to-day at 68.95.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

CONSOLS.

BULLION.—A very remarkable falling off in both the imports and exports of bullion for the six months ending 30th June of this year, as compared with the six corresponding months of 1859, has taken place, viz.:—

	Gold.	Silver.	Total.
Imports have diminished	7,677,091*l*	4,169,111	11,847,002
Exports have diminished	6,764,549	4,216,994	10,981,543

The principal diminution, in the exports, as compared to 1859, are to—

	£
British India and China	2,350,000
Continent of Europe	8,900,000

and in the imports from—

	£
Continent of Europe	7,100,000
Constantinople	500,000
United States	2,950,000
Australia	1,100,000

Notwithstanding this large diminution of imports and exports, the balance has in both years been in favour of imports, viz., in

	£
1859	1,114,272
1860	248,813

but the balance has been too trifling to have had any influence on the money market.

Messrs Pixley, Abell, and Langley's Circular gives the following particulars in regard to bullion, the exchanges on India, and Indian Government paper:—

Gold.—The amount of gold mentioned in our last circular of the 28th June, as remaining to be dealt with—viz., 216,000*l*—has all been taken for the Continent, and we have to report the arrival of the Prince of Wales, from Melbourne, with 132,000*l*; the Africa, from New York, with 40,000*l*; and the Tyne, from the Brazils, with 27,000*l*. About 82,000*l* of these arrivals has been sent to the Bank, the remainder has been taken for export. Only three vessels are now known to be on the way from Australia, and they have nearly 500,000*l* in gold in all.

Silver.—There being but little demand at present for silver, the price has receded, and for that brought by the La Plata only 61½d per oz standard could be obtained, and the whole amount was taken by continental buyers. If any orders should come by the Bombay letters, a rise in price may be looked for, as silver cannot be imported at the above quotation. The Tagus has brought 26,916*l* from the Peninsula.

Mexican Dollars.—The dollars per La Plata were sold at 62½d per oz, showing a decline in price. Several large sums had arrived here from New York and elsewhere, and as the demand had been nearly all supplied, a reduction in price had to be submitted to.

Exchange on India continues weak and dull; and we quote prices 1s 11⅞d to 2s 0⅛d for bank drafts on Bombay and Calcutta, 60 days' sight; bills with documents, 1s 11½d; Madras, 1s 11⅞d to 2s.

India Government Loan Notes are a shade better than at the date of our last. We quote 5½ per Cents. 101½ to 102, and 5 per Cents. 96¾ to 97, at which quotations business has been done.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 73s 9d to 74s per oz, last price; United States gold coin, 76s 2¾d per oz, last price. Silver—Bar silver, 5s 1½d per oz std, last price; bar silver, containing 5 grs of gold, 5s 1¾d per oz std, last price; fine cake silver, 5s 6½d per oz; Mexican dollars, 5s 2⅛d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11½d to 4s 11⅝d per oz, last price.

COMMERCIAL FAILURES.—We regret this week to have to announce heavy failures in the leather trade, the largest of which has been the house of Streatfield, Laurence, and Mortimore, whose liabilities amount to about one million, and whose failure has caused that of many others in the same trade.

It would appear that they almost monopolised the trade, and at the close of the Crimean war were not only very heavy losers by the fall which took place in leather, but also by their extensive dealings with other houses in the same trade, whose losses could only be met by being bolstered up by means of extensive bill transactions.

The commission and interest paid on the renewal of these bills have gone on increasing, till the amount became so large as to alarm those who were in the habit of discounting them, and when a determination was at length come to to curtail the accommodation, the crash came, and the houses contained in the subjoined list have been obliged to succumb, viz.:—

	£
Messrs Streatfield, Laurence, and Mortimore	1,100,000
Smith, Patient, and Smith	200,000
T. W. Mortimore	80,000
Laurence Mortimore and Co.	300,000
John Baker	6,000
W. C. Munday	30,000
Mr Hacker	30,000
A. Wariog	30,000
D. Carpenter	26,000

The above houses have placed their affairs in the hands of Messrs Coleman, Turquand, and Co., and the two following, viz.:—

	£
J. Herbert, Smith, and Co.	180,000
T. Gibson	140,000

in those of Messrs Quilter, Ball, Jay, and Co.

It is stated that these houses will be wound up under inspection, and, as the dividends on their estates will depend greatly on the favourable realisation of their stock in trade, it has been determined to dispose of it gradually, so that no undue pressure shall take place in the leather market from forced sales.

The following failures have also taken place, but the amounts are not known:—

Messrs W. Francis and Co.,
J. G. Sullivan,
Joseph Hooper,
Hooper and Parkinson,
W. J. Armstrong.

The creditors of Messrs Draper and Co., who failed for 175,000*l*, have accepted a composition of 13s 6d in the pound, payable at three, six, nine, twelve, and fifteen months.

A few minor failures are reported this afternoon, but we will not give publicity to their names until they are fully confirmed.

RAILWAYS.—The market for English railways has been

remarkably firm during the week, and especially to-day, and most of the principal lines show improvement.

The traffic returns are so favourable that the public continue to invest.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day:—

	Closing prices last Friday.	Closing prices this day.
Railways.		
Bristol and Exeter	104 6	105 7

Great Western of Canada	10¾ 11½	10¾ 11½

Miscellaneous.—Advices from Paris state that the whole of the railway obligations, for which subscriptions were opened at the Bank of France, amounting to 11,800,000*l* sterling, have been taken up.

It is stated that certain English firms offered to bring out the new Sardinian Loan for 6,000,000*l* at the price of 80 with 2 per cent. commission; but the Government have determined on inviting a national subscription.

A meeting of the shareholders of the Western Bank of London has been held to consider the report of the liquidators, which describes the realisations effected since April, 1859, when the resolution to transfer the business of the Company to the London and County Bank was adopted. The debts and liabilities at that time were 255,097*l*, exclusive of the paid-up capital of 200,000*l*. The total required to be provided for was, therefore, 455,097*l*. The nominal assets were 452,002*l*. Of these, 411,730*l* have been realised, and a further sum is expected of 14,993*l*. In that case, the total loss sustained by the proprietors will be about 30,000*l*, or 15 per cent. on their investment. All the liabilities have now been cleared off, with the exception of 2,000*l* prospectively due to the late Manager. The sum of 1,500*l* was voted to the liquidators.

At a meeting of the Colonial Bank, Mr C. Marryat in the chair, the report recommending a dividend at the rate of 10 per cent. per annum was unanimously agreed to, leaving a balance of 8,593*l* 4s 10d to be added to the reserve fund, thereby raising it to 68,896*l* 5s 8d. It appeared from the report of the Directors that the bank circulation was 245,965*l* 11s 8d; that its deposits, with bills payable and other liabilities, amounted to 1,424,297*l* 3s 6d; the paid-up capital, 500,000*l*; the reserved fund, 60,303*l* 0s 10d; and the net profit for the half-year, ending 31st December last, 33,593*l* 4s 10d. The bank's assets consisted of specie, 302,237*l* 4s 9d; bills discounted and those past due, 1,061,920*l* 7s 7d; due on current accounts, 26,589*l* 8s 3d; due to the London establishment on bills remitted and cash at bankers', 869,396*l* 4s 7d; and bank premises, 4,015*l* 15s 6d. The Board had awarded a gratuity of 10 per cent. upon their salaries to the officers of the establishment. This gratuity, amounting to 2,530*l*, was paid out of the profits of the half-year, which would otherwise have stood at 36,123*l* 4s 10d.

A new Russian State Bank is about to be established at St Petersburg, with a capital of 15,000,000 roubles (about 2,500,000*l* sterling). The profits are to be applied partly to the redemption of the 5 per cent. Bank notes and the loans of the Credit establishments to the Treasury, and partly to the accumulation of a reserve of 3,000,000 roubles. In case of the losses exceeding this reserve, the original capital is to remain intact, but the deficiency is to be made up by the State. The general operations of the Bank will be discounting, the purchase and sale of the precious metals, and the usual business of a bank.

At the meeting of the London Dock Company, a dividend was declared at the rate of 30s per cent. for the half-year, out of the available balance of the Company, which amounted to 200,678*l* 11s 6d. This dividend will absorb 57,253*l* 6s 1d, leaving in hand 143,425*l* 5s 5d to be carried to the account of the current half-year. The Company's business showed a general increase over the corresponding period of 1859, viz., in ships of 120, in tonnage 36,367, and in earnings of 16,306*l* 4s 11d, notwithstanding the lowering of tolls to the extent of 10,000*l*.

At a meeting of the Kapunda Mining Company, it was stated that the estimated profit for the year was 16,868*l*, out of which a dividend was declared of 2s per share, or at the rate of 10 per cent. free of income tax.

The report of the Peel River Land and Mineral Company states that the available balance for 1859 is 19,309*l*, out of which is recommended a dividend of 3 per cent. per annum.

The precise amount of specie sent by the Pera on the 4th was 283,338*l*, 282,800*l* being silver, and 538*l* gold. The total for India is 32,440*l*, and for the Straits and China 250,898*l*. The Government remittance to Hong Kong is 93,894*l* in silver.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 1-10th per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 109⅜ to 109¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; and after making allowance for charges of transport and difference of interest, the present rate leaves a very trifling profit on the importation of gold from the United States.

The Commercial Times.

Mails for the Ionian Islands.—The contract packets which were established in June, 1859, for the conveyance of mails between Malta and Corfu, in consequence of the Austrian postal service between Trieste and the Ionian Islands having been interrupted by war, will be withdrawn after the departure of the mails appointed to be despatched from this country viâ Southampton on the 4th, and viâ Marseilles on the 10th of July inst.; and all correspondence for the Ionian Islands posted after the above dates will, unless specially addressed to be sent otherwise, be forwarded as formerly in the closed mails to Prussia viâ Belgium, for transmission by the Austrian packets from Trieste. Letters and newspapers for the Ionian Islands, sent viâ Trieste, will be liable to the following rates of postage, viz.:—Letters not exceeding ½ oz, 1s; above ½ oz and not exceeding 1 oz, 2s; above 1 oz and not exceeding 2 oz, 4s; for each additional oz, 2s. Newspapers—British rate, 1d each; foreign rate, 1½d per ½ oz according to weight. The postage of letters may either be paid in advance, or it may be left to be paid on delivery of the letters, at the option of the sender, but the postage on newspapers must be paid in advance or they cannot be forwarded. Registered letters will be liable to a fee of 9d each, and upon such letters both the fee and postage must be paid in advance. In addition to the regular mails viâ Trieste, ship letter mails will be forwarded to the Ionian Islands by the private steamers which leave Liverpool three times a month, for Corfu. These ship letter mails will be made up principally for the transmission of soldiers' and seamen's letters, and of books and newspapers, but any letters which the public may desire to send by ship from Liverpool, will be so forwarded if

specially addressed—"By private ship from Liverpool." Letters thus forwarded will be liable to a postage of 6d per ½ oz; books to a postage of 3d per 4 ounces; and newspapers to a postage of 1d each, which must in all cases be paid in advance. Letters to and from soldiers and seamen in Her Majesty's service, posted under the special regulations applicable to such letters, will be chargeable with a rate of 1d only.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Only a limited quantity of English wheat was on offer at Mark-lane to-day. However, owing to the favourable state of the weather, and the enormous importations of produce from abroad, the demand ruled heavy in the extreme, at nominal quotations. Foreign wheat was very dull, and 2s per quarter lower to have forced sales. No change took place in the value of barley, beans, or peas; but oats gave way quite 1s per quarter compared with Monday. Flour was the turn in favour of buyers. The accounts at hand from most parts of England state that a decided improvement has taken place in the general appearance of the wheat crops. Most of the early wheats are now in full blossom. The imports from abroad amount to 44,980 quarters of wheat, 3,500 barley, 109,450 oats, 1,920 sacks and 7,030 barrels of flour. At Liverpool, this morning, produce, generally, was heavy.

Messrs Pietroni, Draper, and Co., thus refer to the state of the grain trade at Odessa, to the 22nd ult.:—

For damp soft wheats, weighing 9 10 to 9.25 poods, 8.50 ro to 9 ro has been paid, and for those weighing 9.20 to 9.30 poods, 9¼ ro to 9¾ ro. For choice qualities of 9.30 to 9.38 poods, which are only in the hands of exporters, 10 ro to 10.50 ro are asked. Saudomirka—The demand has been very brisk, but transactions have been limited for want of stock. Prices are firm at 9 ro to 9¾ ro. Ghirka—All the stock we have is held at 8.50 ro to 10¼ ro. 1,500 chetwerts of the new crop, for delivery from 1st September to 15th October, O.S., have been purchased at 9.50 ro per 10 poods, with a forfeit of 40 copecs in case of non-delivery. Barley—3,000 chetwerts have been collected in small parcels at 3.95 ro to 4.10 ro. Some sales have been made for delivery in August-September, with or without a forfeit, at 3.75 ro to 4 ro. Linseed—Market very quiet, and prices tending downwards. There are sellers for October-November delivery, at 9¼ ro, and even at 9 ro, but no buyers. Freights firm, at 50s to 52s 6d. Exchange, 6.60 to 6.63 per £. The following are the present quotations:—Wheat, Polish Odessa, 44s 6d; ditto, Saodomirka, 43s 3d; ditto, Ghirka, 44s 6d; rye, 22s 6d; maize, 27s 6d; barley, 18s; oats, 14s; linseed, sifted, 44s 9d; ditto, unsifted, 42s 6d; rapeseed, 24s 3d.

SHIPMENTS from ODESSA.

	To United Kingdom, May 1 to 31.	Total to all Parts, Jan. 1 to May 31.
	che'rs	chets
Wheat	71,443	298,934
Maize	3,520	237,249
Rye	7,226	54,727
Linseed	6,632	37,443

The sales during the week in the Liverpool cotton market have amounted to 69,000 bales, and include 53,000 bales to spinners, 2,000 on speculation, and 14,000 bales for export. Quotations are without change; but, notwithstanding the extent of the transactions, buyers, in many instances, again have had the advantage. The stock depresses the market too much to allow of any improvement. The market closes to-day without life: sales 10,000 bales. No change in prices.

We have very little change to notice in the demand for, or value of, any kind of tea. The market, however, is somewhat healthy.

Slightly enhanced rates have, in some instances, been paid for good and fine raw sugars. Low and damp parcels, however, have moved off slowly on former terms. Refined sugars are in steady request at late rates.

The coffee trade has continued in a very inactive state, and late currencies have not been supported.

The annexed information is furnished by Messrs Trueman and Rouse:—

IMPORTS and STOCKS of SUGAR and COFFEE at the PRINCIPAL EUROPEAN PORTS, for the Five Months ending 31st May, 1859 and 1860.

* The stocks in Holland are in first hands only; in all other countries in first second and hands.

We have to notice a heavy demand for rice; but, compared with last week, no change of importance has taken place in prices.

The next series of public sales of colonial and other fine wools will commence on Thursday, July 19. The quantities of colonia wool already arrived are as follows:—Sydney, 22,159 bales; Victoria, 24,716; Tasmania, 10,527; Adelaide, 4,993; New Zealand, 11,044; Swan River, 1,010; Cape, 8,522; total, 82,971 bales. The private market generally is heavy. The Liverpool sales have gone off without material change, compared with the former series.

Messrs Churchill and Sim have issued the following return showing the stocks of timber in the public docks on the 1st July:—

	1860.	1859.	1858.
Foreign deals .....pieces	768,000 ...	770,000 ...	885,000
— Battens, boards, and ends...	564,000 ...	502,000 ...	312,000

— Spruce ditto	371,000 ...	420,000 ...	501,000
— Pine timber.....loads	9,000 ...	5,400 ...	7,900
United States pitch pine timber	4,500 ...	5,000 ...	4,000
East Indian teake	6,300 ...	13,300 ...	10,600

The inquiry for rum has been somewhat restricted, at previous currencies. Brandy and grain spirit have changed hands slowly.

Scotch pig iron has ruled about stationary. Tin is steady, at 132*l* for Straits. The arrivals at this port during June were 4,573 slabs Straits and 1,350 slabs Banca from Holland, together 5,920 slabs, making the imports since the 1st of January as follows:—

	1860 slabs	1859 slabs	1858 slabs
Banca	5115	2425	24332
Straits	36795	15914	7594
Total	41910	18339	31926

The stock in warehouses here is estimated at 950 tons.

The following is the usual quarterly report of the Scotch iron trade, issued by Mr Thos. Thorburn:—

The make of pig iron has attained an unprecedented expansion. The quantity produced by the 131 furnaces in blast reached in the quarter just closed 277,000 tons, and shows an increase of 35,000 tons when compared with the same period of 1859. The total deliveries, including the local consumption and exports, were 235,000 tons, and are 5,000 tons larger than in the same quarter of last year, but 5,000 tons less when compared with the corresponding period of 1857. The stocks have therefore increased 42,000 tons, and are 340,000 tons, exclusive of Carron. Subjoined are the present prices:—No. 1 Gartsherrie, 53s; No. 1 Coltness and Calder, 51s 6d; No. 3 Gartsherrie, Langloan, and Glengarnock, 50s 6d; Nos. 1 and 3 G.M.B., 50s; mixed Nos warrants, 51s 3d. Ayrshire brands, 49s 6d to 51s; East Coast brands, 49s 6d for mixed Nos. Bars, 7*l* to 7*l* 10s; plates, 8*l* 15s; rails, 6*l* 10s to 7*l*; railway chairs, 3*l* 15s to 4*l*; iron pipes, 4*l* 15s to 5*l* 10s per ton.

"The inactivity in the leather market," observe Messrs Powell and Co., "was increased by a degree of anxiety and distrust, which prevailed for some weeks, in consequence of several failures which had occurred in different branches of the trade. This week, however, a crisis has arrived, which may be called unparalleled in the annals of the leather trade. Some of the largest of the manufacturing and commission houses have suspended payment, and the magnitude of the interests involved have necessarily created much present alarm, and checked almost all business operations. The results of these events cannot be foreseen, but they must tend to depreciate prices. It should not, however, be forgotten, that they will not interfere in any way with the consumption of leather, and therefore their influence cannot be of permanent duration. In raw goods the transactions have been limited, with considerable imports, and a general downward tendency in prices. The effect of the present calamities in the trade on the value of foreign hides is, of course, uncertain, but will, no doubt, be greater than on the manufactured article. The depression of English market hides on Tuesday was extreme, but cannot be taken as affording data for the reduction on foreign raw goods."

The dealings in fruit and saltpetre have been somewhat restricted, at about previous rates. Hemp has sold to a fair extent, at 28*l* 10s to 29*l* per ton for Petersburg clean.

COMPARATIVE STATEMENT of HEMP and FLAX remaining on hand in the London Warehouses, the Dealers' Stocks included, on the 1st of July, 1859 and 1860.

The trade have taken fully their usual supply of cotton this week, and a fair amount of business has been done for export. Speculators are paying rather more attention to the low qualities of American. Some holders press their stocks on the market, and very irregular prices have been accepted in some quarters. We have not made much change in our quotations, but the buyer has some advantage. Egyptian have been neglected, and are difficult to move. Brazil are without alteration. East India have barely maintained former rates. The sales to-day are estimated at fully 10,000 bales. The market is irregular. The reported export amounts to 14,180 bales, consisting of 8,410 American, 430 Brazil, and 5,340 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Somewhat improved advices have reached us from the manufacturing districts this week. They agree in stating that the home trade is remarkably healthy—that there are only moderate stocks in warehouse for the time of year—and that prices generally are well supported. For India, the purchases of cotton goods have not been large; but some large transactions have been entered into in articles suitable to the German markets, as well as in woollens for shipment to the United States.

MANCHESTER, Thursday Evening.—In the absence of fresh telegrams from the East, our market has been slightly influenced for the better by the return of more genial weather. The improvement, however, amounts to little more than rendering our quotations steadier. At the close of last week offers had been made by one or two of our leading China houses for 7 lbs and 8 lbs 4 oz shirtings at prices which were then refused, but have since been accepted, and extensive sales of these goods have been effected, for short periods of delivery. The market has, so far, been relieved of some accumulation of stock; but, until we experience a more general demand, embracing a wider range of cloths, we cannot look for much improvement in prices. Jacconets and printing cloths have partially receded in value, and the demand has considerably slackened. Teloths and domestics are flat, and easier to buy. The home trade exhibits no improvement, but continues inanimate, and the transactions in this department are of a retail character. Yarns have lately declined in an equal ratio with cloth, but their tendency is still lower. The manufacturers' counts, represented by 32's to 36's twist and weft, have shown the greatest weakness, while 50's and upwards are relatively dear. Bundle yarns are depressed and irregular in quotations. The German merchants supply themselves with extreme caution, and only in small assortments.

HUDDERSFIELD.—We have to report a very much improved market, as compared with the last few weeks. There has been a better attendance of buyers from London, Glasgow, and the country generally; and a heartier tone has, on the whole, pervaded all departments of the general market. There is a good demand for black doeskins of middle quality, at prices ranging from 3s 6d to 4s 6d per yard. Low woollens and unions are also in better demand than they have been for some time, in consequence of the increased activity of the shipping trade. Wools are dear.

ROCHDALE.—The very high prices of English wool would act as a prohibition on purchases except for immediate wants, even were stocks abundant, but this is far from being the case. Low descriptions are very much required, and so eagerly sought that staplers are kept bare of stock, and in their turn experience great difficulty in replenishing. Under these circumstances, it is not surprising that quotations are very firmly maintained.

BRADFORD.—Wools remain very firm in price, but the amount of business doing is not important. As regards worsted yarns and pieces, the market has been remarkably quiet, and the business transacted within a very narrow compass. Rates are unaltered.

LEEDS.—More goods of seasonable kinds were sold than for some weeks past. Prices are firm, consequent on the tone of the wool market, and the stocks being low, the mills are well employed.

HALIFAX.—There is no new feature to notice in the condition of the textile manufactures of this town and district. The foreign yarn trade is somewhat dull, and that for the home trade is rather quiet. Still wool does not fall in price, hence spinners and manufacturers are cautious in their dealings unless they can get an advance for their products equal to the advance in the price of wool.

LEICESTER.—The fancy branch is exceedingly dull. In the country districts trade is also quiet, and some of the operatives are only partially engaged. Yarns are very high in price, and are likely to continue so, as wools are realising extreme rates.

DUNDEE.—The linen trade is by no means active; however, prices continue firm.

BELFAST.—Flax is dull in sale, and there is only a moderate sale for linen goods.

WOLVERHAMPTON.—The iron trade is tolerably healthy, and prices rule steady.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, June 21.—FLOUR.—The market for State and Western flour has been somewhat irregular since Friday last, and prices have fluctuated considerably. The demand was moderate on Saturday and Monday, and prices declined 5 to 15 cents per bbl. The advices from Europe were considered more or less favourable, however, leading to a better inquiry at a slight improvement in prices. The sale for the three days comprise 32,200 bbls. Canada flour has been in steady fair demand, and the sales since Friday comprise 1,600 bbls, of which 350 were placed yesterday at 5.50 dols to 7.50 dols per bbl, as to quality. The demand for Southern flour has been moderate, and the market quiet at unchanged rates. Export from 1st to 19th June, 105,151 bbls, against 40,069 bbls in 1859.

GRAIN.—With a fair demand from the local millers, and a moderately active inquiry for shipment, based upon the more favourable European advices, received since our last, the market for wheat has assumed a more buoyant tone, and nearly all kinds have appreciated considerably. The sales comprise 166,600 bushels, including 55,000 Milwaukee Club at from 1.22 dol to 1.27 dol; 28,000 Racine Spring, 1.22 dol to 1.24 dol; 5,000 red Southern, 1.30 dol; 1,100 amber Western, at about 1.37 dol; 5,000 red State, 1.28 dol; 16,800 Chicago Spring, 1.19 dol to 1.22 dol; 10,200 white Indiana, 1.38 dol to 1.40 dol; and 2,000 white Southern, on private terms. Corn has been in fair demand for consumption and export.

EXPORT of BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND, since September 1, 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Owing to the return of fine weather—the heavy importations of foreign produce, especially of wheat, oats, and flour—and the more favourable accounts at hand respecting the appearance of the wheats, which in some of our forward districts are now in blossom, the grain trade has been in a most inactive state since we last wrote. English wheat has been taken by the millers in very limited quantities, at a further decline in value of from 1s to 2s per quarter. Foreign qualities have, likewise, ruled heavy, and so little business has been passing in them that the currencies have ruled almost nominal. To force sales, 2s less money must be taken by the importers. Many of the leading millers are now somewhat heavily in stock; hence they will not be compelled to come forward as buyers to any extent for some time. There has been very little passing in the barley trade; nevertheless, the quotations have been supported. Malt, oats, beans, and peas have commanded very little attention, at barely late rates, and most kinds of flour have been offered on easier terms.

The leading continental markets have been less active for wheat. On the whole, however, a good business has been done in wheat for shipment to the United Kingdom. Spring corn has been extensively dealt in at full quotations. The latest advices from the United States are to the effect that liberal supplies of produce were coming forward, and that steady purchases were being made for the London and Liverpool markets. The accounts from abroad in reference to the crops are satisfactory. One report from a correspondent at Odessa says:—"I have just returned from a visit to the chief corn-growing districts in the neighbourhood of Odessa. The product of the new crop will shortly appear, and the present appearances give reason to expect a most satisfactory result. I have been through two governments, and have everywhere found the fields more luxuriant than for the last 25 years. Rye is nearly six feet high. Winter wheats magnificent, and spring sown will be equally good; in a word, if nothing unfortunate intervene, we shall have one of the best years ever known for our farmers. Here and there (especially in our immediate vicinity) some ravages have been

occasioned by locusts, but this is only partial. A good harvest seems certain. Rye and barley are far enough forward in our neighbourhood to be cut in eight or ten days, and the soft and hard Ghirka will be ready in three or four weeks."

In Scotland, there has been very little inquiry for wheat, on lower terms. Other descriptions of produce have moved off slowly, at about previous currencies. Very few shipments have been made to the South.

Throughout Ireland, the corn trade has been in a most inactive state, and prices have had a drooping tendency.

The few samples of English wheat on sale in to-day's market met a very dull inquiry at nominal quotations. Foreign wheat was heavy in the extreme, and 2s lower to sell. Oats gave way 1s per quarter, and the value of other kinds of produce was barely supported.

Mr Ed. Rainford states that only 8 cargoes of grain have arrived off coast since the 29th ult., and that the business done in floating cargoes has continued limited.

The London averages announced this day were :—

COLONIAL AND FOREIGN PRODUCE MARKETS

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—There has been a much better feeling in the market this week, and prices are occasionally ruling rather higher for parcels on the spot. An improved demand also exists for export, five floating cargoes of foreign being sold to yesterday at higher rates than lately obtained. Low sugars attract increased attention. The sales of West India up to yesterday (Thursday) amounted to 5,072 hhds, including Barbadoes, by auction, at 36s to 42s 6d; and Jamaica at 38s to 41s 6d per cwt. There have been comparatively small public sales of this kind. The deliveries continue steady, and the stock has decreased to the extent of several thousand tons during the past fortnight.

Mauritius.—857 bags brought forward on Tuesday were partly sold: very low dark to good brown, 31s 6d to 37s 6d; grainy, brown and grey, 38s to 41s 6d per cwt.

Madras.—7,286 bags grocery found buyers at the full valuations: grainy yellow, 42s 6d to 46s; white, 46s 6d to 53s; soft brown and yellow, 35s to 40s. 593 bags native were brought in at 32s to 33s for dark to good brown.

Bengal.—3,500 bags low brown date sort have sold privately at 29s 3d per cwt.

Foreign.—Two floating cargoes Havana have sold for near ports: No. 16¼, 30s 9d; No. 12½ to 13, 28s 6d. One of brown Paraiba at 21s 3d for the same destination. Two of Havana for Gottenburg, Nos 14½ to 16, 29s 4½d to 30s 9d. Three for the United Kingdom, Nos. 9 to 12, 26s 6d to 27s 9d; and one of clayed Manilla, viz., 9,300 bags, at 24s 3d. 14,500 bags offered by auction were sold, at and afterwards, from 36s 3d to 37s 3d; besides 12,000 bags privately. At auction, 579 casks Porto Rico found buyers: brown and grey, 36s 6d to 41s; grocery, 41s to 45s. 424 casks Cuba partly sold: brown, 36s to 37s; grey and yellow, 37s 6d to 40s 6d. 2,337 boxes Havana partly sold: strong dry grey, middling to fine, 42s 6d to 46s: the remainder withdrawn or bought in, including some grainy white of indirect import at 52s 6d to 54s 6d per cwt.

Refined.—The home market is very steady. Common goods, 52s per cwt. Dutch crushed has rather advanced on the Continent.

MOLASSES.—150 puns Antigua have sold at 17s 6d per cwt.

RUM.—Further sales of East India are reported, including some Bengal at 1s 5d, and other parcels of which particulars do not transpire. Demerara has realised 1s 10d to 2s per gallon.

COCOA.—It is said that the Government contract for 100 tons was taken in Guayaquil on the 2nd inst. The market remains quiet, and 260 bags Grenada only partly sold at 61s to 62s 6d. 166 bags Trinidad were bought in above the value. 40 barrels 117 bags Bahia were taken in at 57s to 58s per cwt.

COFFEE.—The sales have gone off with less animation than of late, yet 957 casks 535 barrels and bags plantation Ceylon chiefly found buyers at previous rates to 1s decline on some marks. 170 casks 50 barrels and bags native were only partly sold at 60s 6d to 63s for good ordinary to good. 168 bales ungarbled Alexandria Mocha were taken in at 90s. A cargo of very good firsts Rio has sold for the Mediterranean at 60s per cwt.

TEA.—The trade have made some few purchases from the recent arrivals at about the prices established in the public sales. Last week's series concluded on Monday, when 958 packages sold without further change in value.

RICE.—Transactions have been moderate in extent at easier rates, including low Necrancie Arracan at 9s 3d to 9s 6d; Cochin China, 10s; white Bengal, 10s 6d to 12s; new of good to fine quality, 14s 3d to 14s 6d per cwt. A floating cargo of Necrancie Arracan has sold at 11s per cwt, open charter.

IMPORTS and DELIVERIES of RICE to June 30, with STOCK on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	15000	10100	57600	32500

Exported	8200	12000	8650	30000
Stock	47150	70800	95500	40100

SALTPETRE.—The few sales made in Bengal privately have been at easier rates, and the market is quiet. Refraction 7 to 4¼ per cent. sold at 43s to 44s. 1,483 bags Bengal in public sale partly sold: refraction 11¾, 39s 6d; fresh water damaged, refraction 5 to 5½, 41s to 41s 6d. 1,875 bags Bombay all found buyers at 34s 6d to 36s 6d, refraction 48 to 20 per cent.

IMPORTS and DELIVERIES of SALTPETRE to June 30, with STOCK on hand.

	1860	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	7500	10500	6100	8600
Delivered	6200	9400	7600	5700
Stock	5150	4100	5150	5000

DRUGS.—About 1,000 cases castor oil were brought forward in the sales yesterday, when prices declined ¼d per lb. Otherwise no change of importance occurred.

COCHINEAL.—55 bags Teneriffe found buyers: silvery, 3s 1d to 3s 4d; blacks, 3s 6d per lb; these prices being about the same as before.

OTHER DYESTUFFS.—Gambier is firm at 16s 6d to 17s. More inquiry has prevailed for safflower. Turmeric is unaltered.

SAPAN WOOD.—36 tons common Manilla went at 5*l* 10s to 6*l* 5s per ton.

RUBBER.—Fine Para is firm at 2s 11d to 3s. East India on the spot, 2s 2½d to 2s 3d per lb.

METALS.—The quotations of most kinds remain steady, but the market is not at all active. Scotch pig iron touched 52s at one period this week, but has since receded 1s per ton. Railway bars and other kinds do not show any further change. Tin continues firm at the recent advance, good Straits selling at 132s. No transactions are reported in spelter; the nominal price is 20*l* 5s per ton. Stock on the 1st inst., 3,900 tons, or rather less than last year's. Copper is unaltered.

HEMP.—There have been few sales of Russian effected. Petersburg clean is still quoted 29*l*. The stock consists of 1,600 tons, against about 2,000 tons in the two preceding years. Manilla is quiet. Of 1,700 bales jute offered on Wednesday, about one-fourth part sold at easier rates.

LINSEED is not very active. Calcutta, 49s; Bombay, 51s to 52s per quarter.

OILS.—Linseed remains steady at 28*l* 12s 6d to 28*l* 15s, and 29*l* 10s per ton for delivery in the last four months of the year. Rape sells slowly: foreign refined, 43s 6d to 44s; brown, 41s 6d to 42s per cwt. Palm can be obtained on easier terms with large arrivals: fine, 45s 6d. Cocoa-nut continues in demand: Cochin, 47s; Ceylon, 46s per cwt, and 6d more for arrival. Fish oils are quiet. Pale seal quoted 36*l*. Olive remains dull. A cargo of Cagliari has sold for the Continent at 57*l* 15s per tun.

TURPENTINE.—Imports reach 4,900 barrels, and the sales 1,200 barrels at 8s 9d. Spirits have been dull: American, 34s per cwt.

TALLOW.—Prices of foreign are again rather higher, but the warm weather must interfere with the operations of the trade. This morning first sort Petersburg Y. C. may be quoted about 53s in all positions.

PARTICULARS OF TALLOW.—Monday, July 2.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market closes with an upward tendency. 495 casks West India, 5,300 bags Mauritius, 33 bags Bengal, and 3,440 bags Penang, brought previous rates to 6d advance. 1,757 baskets Java: grey and white, 43s 6d to 47s 6d. Four floating cargoes of Havana are reported for the United Kingdom: Nos. 11 to 13, 27s 9d to 28s 1½d; and a cargo of Cuba at 25s 6d. On the spot, 7,000 bags low Bengal at 29s 3d to 31s 3d; and 4,000 bags common clayed Manilla at 36s 6d. The week's business in West India amounts to 5,070 casks.

COFFEE.—561 casks 147 barrels and bags plantation Ceylon, by auction, went off with more spirit at the decline previously reported. 814 bags native went at 53s to 54s 6d for very low quality; blacks and triage, 41s. 40 casks bought in at 60s 6d per cwt.

SPICES.—353 bags pimento were bought in at 3¾d to 3¼d. 150 barrels Jamaica ginger sold at 4*l* 7s to 7*l* 5s.

RICE.—1,354 bags Bengal were taken in at 10s 6d for low broken white.

SALTPETRE.—325 bags of indirect import, refraction 36¼, realised 85s to 35s 6d per cwt.

TALLOW.—On the spot not much passing, and 52s 9d accepted for P. Y. candle, but for late delivery many transactions at 52s 9d to 53s.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar remains very firm, but no material alteration to note as respects prices. In Dutch crushed, some few sales have been made in B & H, No. 1 barrels, at 32s 6d for forward delivery; also 50 tons S & T superfine, in 2 cwt barrels at 33s 9d f.o.b. in Holland.

GREEN FRUIT.—West India pine apples engross the trade. 15,000 per Vigilant, sold by Keeling and Hunt at public sale, went at prices in character with size and quality. Lemons scarce; some parcels Naples, per steamer, advanced 5s per case. A fair business doing in nuts: Barcelona in request, Para 2s per barrel lower.

DRY FRUIT.—There is a fair export demand for new low currants from 27s to 29s, but the business transacted has not been large. Stock of currants here about 9,400 tons, against 5,600 tons last June; this is certainly a large stock so soon before the new crop. Raisins depressed: some Turkey reds, sold at auction at 24s, which is 2s lower. The low prices and heavy stocks here must operate in favour of moderate opening prices. The accounts from all quarters continue satisfactory as to crop.

COLONIAL WOOL.—The sales will commence on 19th instant; 82,000 bales have arrived. The market continues quite firm.

FLAX unaltered.

HEMP.—Market steady this week, and a fair business doing at our quotations.

COTTON.—Sales of cotton wool from Friday, June 29, to Thursday, July 5, inclusive:—350 bales Surat at 2½d to 3¼d for ordinary to middling; 500 bales Madras at 4½d and ⅝d to 5¼d for fair to good fair Tinnivelly. The market has been dull, and the transactions limited, prices being irregular and generally ⅛d per lb lower for Surat. Tinnivelly remain about the same as last week. 4,200 bales, mostly fair to fully good fair Dhollera and Oomrawattee, and 1,000 bales Tinnivelly and 108 West India are advertised for public sale on Thursday, the 12th instant.

SILK.—Since the public sales, the silk market has been comparatively quiet, but prices are without change. The reports of the progress of the European silk crops lately received are more favourable.

TOBACCO.—Sales have continued to a fair extent at current rates, but the market has not presented any change in character. A sale of a fine parcel of leaf was made for exportation at full rates.

LEATHER AND HIDES.—At Leadenhall, on Tuesday, the calamitous failures absorbed all attention, and suspended all business. The only effect manifested was in market hides, on which an immense reduction took place. Since which several firms connected with the large failure in London have found it necessary to suspend their payments, and the extent of the mischief is additionally seen; but it is almost entirely confined to the dependents on that house. The leather trade generally never stood in a better position. At the public sales this week not less than 440,000 East India tanned goat and sheepskins were offered, 360,000 of which were sold at very little reduction from the prices of the previous sale. At the raw hide market at Leadenhall, on Friday, there were hardly any hides offered. A far larger number than usual have been purchased by private contract. Those that were brought to market realised a considerable advance on Tuesday's prices.

METALS have kept steady in price, but move off slowly. Copper has been in better demand for foreign, and holders have stiffened a little in prices: English is without change. Iron shows no change in manufactured, but Scotch pig has been done in largely at improved rates. Tin keeps firm, but no large amount of business is reported. Spelter is quite neglected, quotations being nominal and unchanged. In lead there is little doing. Tin plates find a steady market, and at the Gloucester meeting this week the makers advanced their prices.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	55	0
Fat by ditto	2	9½
Yellow Russian	54	3
Melted stuff	38	6
Rough ditto	22	6
Greaves	16	0
Good drags	7	0

Imports this week 7,064 casks.

PROVISIONS.

Notwithstanding the slowness of sale, bacon still continues to keep its price, owing to the high price of pigs on the other side. Hams are very slow of sale.

METROPOLITAN CATTLE MARKET.

THURSDAY, July 5.—Only a moderate supply of beasts was on offer here to-day; but, owing to the large failures in the hide trade, the demand for all kinds ruled heavy, at barely Monday's currency. Sheep, the show of which was good, were in fair request, at full prices. For lambs we had a steady inquiry, at fully Monday's improvement in value. English calves were taken off freely; foreign slowly, at previous quotations. The supply was seasonably good.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	4	0	4	2	Prime Southdown sheep	5	4	5	6
Second quality ditto	4	6	4	10	Large coarse calves	4	6	5	0
Prime large oxen	5	0	5	2	Prime small ditto	5	2	5	6
Prime Scots, &c.	5	4	5	6	Large hogs	4	0	4	6
Coarse and inferior sheep	4	0	4	4	Small porkers	4	8	5	0
Second quality ditto	4	6	4	10	Suckling calves...each	20	0	23	0
Prime coarse-woolled do.	5	0	5	2	Quarter old store pigs	23	0	30	0

Lamb, 6s 0d to 7s 0d.

Total supply—Beasts, 962; sheep and lambs, 10,700; calves, 405; pigs, 290.
Foreign supply—Beasts, 500; sheep, 1,200; calves, 300.

NEWGATE AND LEADENHALL.

FRIDAY, July 6.—Only moderate supplies of meat are on offer in these markets. The demand generally rules inactive at the following quotations:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	3	2	3	8	Mutton, inferior	3	8	4	0
Middling ditto	3	10	4	2	— middling	4	2	4	6
Prime large	4	6	4	8	— prime	4	8	5	4
Prime small	4	0	4	8	Large pork	4	0	4	8
Veal	4	4	5	0	Small pork	4	10	5	2

Lambs, 5s 4d to 6s 4d.

HOP MARKET.

BOROUGH, Monday, July 2.—The trade has been firm during the past week, with a large business doing. Prices for fair and average qualities are fully supported, and very choice colour and quality realise more money. The reports this morning are decidedly worse, and the duty has receded to 165,000*l*.

FRIDAY, July 6.—The accounts from the plantations come unfavourable. Market very active, at an advance of 2s to 3s per cwt since Monday. Duty, 160,000*l*.

POTATO MARKET.

BOROUGH AND SPITALFIELDS, Monday, July 2.—The supply of old potatoes have now become very limited, and the demand for them is heavy, at from 100s to 160s per ton. New qualities, the arrivals of which are large, move off steadily, at from 6s to 14s per cwt. Last week's imports were 3,912 baskets from Rotterdam.

WATERSIDE, Thursday, July 5.—The arrivals of new and old potatoes have been limited since our last report, and trade brisk at from 120s to to 150s per ton for old Ware, and 8s to 16s per cwt for new potatoes.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* to 5*l* 5s; clover, 4*l* to 6*l* 6s; and straw, 1*l* 8s to 1*l* 16s per load. A slow trade.

CUMBERLAND.—Meadow hay, 3*l* 5s to 5*l* 5s; clover, 4*l* to 6*l*; and straw, 1*l* 8s to 1*l* 16s per load. Trade less active.

WHITECHAPEL.—Meadow hay, 3*l* 3s to 5*l* 5s; clover, 4*l* 0s to 6*l* 6s; and straw, 1*l* 8s to 1*l* 16s per load. A moderate demand.

A few loads of new meadow hay have been sold at from 2*l* 10s to 4*l* per load.

COAL MARKET.

FRIDAY, July 6.—Wall's-end:—Acorn Close 16s 9d—Gosforth 16s 3d—Tanfield Moor 13s—South Hetton 18s 6d—Hastings Hartley 15s 6d—Howard's Hartley 15s 6d—Lambert's Hartley 15s 6d—Straken Hartley 15s 6d. Ships at market, 84.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 6.—The public sales were brought to a close on the 4th inst. East India wools, as usual, formed the bulk, there having been offered 10,557 bales of this description, which were all disposed of at satisfactory prices full, on a par with those obtained at the last public sales in April. The other descriptions were less in favour, and in some instances withdrawn.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 6.—Corn market quiet. Wheat and flour difficult of sale, unless at a reduction of last week. Oats and Egyptian beans lower. Barley and peas firm. Indian corn steady; American mixed, 30s to 30s 3d.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 6.—There has been only a moderate business during the past week in manufactured iron, and that at about previous rates. In Scotch pig iron there has this week been a slight decline, without much iron changing hands. The copper market quiet; also few transactions in lead. Only a moderate business in most other metals.

The Gazette.

TUESDAY, July 3.

BANKRUPTS.

D. Plane, King's Lynn, draper.
T. A. Pickering, Pigott street, Limehouse, manure dealer.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending June 23 amounted to 539,230*l*, and for the corresponding week of last year to 502,440*l*, showing an increase of 36,790*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 237,220*l*, and for the corresponding week of 1859 to 224,821*l*, showing an increase of 12,399*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, July 2.—The railway market improved to-day, and closed with a good tendency, although the highest prices were not fully maintained. Caledonian especially advanced ¾ per cent. In other descriptions the rise was from ¼ to ½. A further recovery took place in the morning in Grand Trunk of Canada stock, 29½ having been marked, but the final quotation was again 28½ to ¾. The debentures left off at 55 to 58; and the preference bonds 90 to 93. Buffalo and Lake Huron shares and some Indian descriptions were firmer. Foreign railway securities remained without change of importance. South Austrian and Lombardo-Venetian were quiet, at ¼ dis. to par. There was a better feeling as regards mines, and several descriptions improved. In joint stock banks, Australian shares were quoted higher. In miscellaneous descriptions, London Discount receded an eighth. Victoria debentures, new, left off at 107¾ to 108; the Canadian loan, 100 to ¼ ex div. bonds, and ¼ pm. scrip.

TUESDAY, July 3.—The market for British railway stocks was inactive to-day, but generally steady. In one or two cases a slight advance took place. In the colonial market, there was a reaction in Grand Trunk of Canada to 28 to ½. The ordinary bonds closed at 57 to 60, and the preference 90 to 92. Great Western shares declined to 10¾ to 11¼. Foreign descriptions showed no change of importance. In American railway securities, the shares of the New York and Erie improved. Mines were dull, at an occasional reduction. East Bassett, however, were firm. Bank of Australasia shares were higher; English, Scottish, and Australian likewise advanced. In miscellaneous descriptions, a fall occurred in London and National Discount, and an improvement in Australian Agricultural. Victoria debentures, new, left off at 107¾ to 108; the Canadian loan, 100 bonds, and 2½ to 3 pm. scrip.

WEDNESDAY, July 4.—The railway market continued quiet, but firm in character. Several stocks again slightly advanced, especially Lancashire and Yorkshire and South-Western. The general transactions to-day were unimportant. In the colonial market, there was another fall in Grand Trunk and Great Western of Canada, the last prices being respectively 27¾ to 28¼, and 10⅜ to ¾. Indian guaranteed were firm. Foreign descriptions continued inactive. Great Luxembourg fractionally improved. In American railway securities, the shares of the New York Central and third mortgage of the New York and Erie advanced. The principal movement in mines was a further rise in East Bassett. Bank of Australasia shares were again higher.

THURSDAY, July 5.—The railway market was again firm, nearly all the leading British stocks closing ¼ to ½ per cent. higher. Eastern Counties, however, was exceptionally heavy, and declined 1 per cent. In colonial descriptions, Great Western of Canada shares rallied to 10¾ to 11¼. Grand Trunk closed at 27¾ to 28¼ the ordinary stock, 56 to 58 the ordinary bonds, and 91 to 92 the preference. In the foreign market, South Austrian and Lombardo-Venetian advanced to par to ¼ premium. New York and Erie shares were also higher, while those of the New York Central receded. Mines were rather dull, except East Bassett, which improved. No change of importance took place in joint stock banks or miscellaneous descriptions. Victoria debentures, new, were last quoted 108; Canadian Five per Cents., 100 to ½.

FRIDAY, July 6.—A moderate business was transacted in the railway share market, and prices showed a further slight advance. Great Westerns improved to 70¼ 70½. Lancashire and Yorkshire to 105¾ 106. North Western to 102½ 102⅝. Midland to 118¼ 118½. North-Eastern, Barwick, to 97½; and North-Eastern, York, to 82½ 82¾. Eastern Counties declined to 56 and 56¼. The foreign lines continued at almost nominal quotations, the only dealings reported being Great Luxemburg at 6¾ 7. In the colonial market, Grand Trunk of Canada advanced to 28½, and Great Western of Canada to 11¼. Joint stock bank and miscellaneous shares were quiet, at about former prices. Bank of Australasia realised 70¼ 70½; Bank of London, 54¾ 55; Oriental Bank, 43¼ 43½; Peninsular and Oriental Steam, 72¼; and Red Sea Telegraph, 19⅜ 19¾.

FIRST-CLASS PROTESTANT EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical and commercial school, it is also highly recommended for a thorough French education. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. Terms inclusive, and vary, according to age and requirements, from £40, £50, to £60 per annum—Id est, four terms, each of 75 days' duration, with two months' holidays. Pupils are received any day, their term beginning from the day of their arrival. No restrictions to parents. Not one case of illness has occurred since the school has been established (1857).—Address, stating age and requirements, Professor Vellèro (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming.

AT HAMBLY HOUSE ACADEMY, Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of all booksellers.

LAWRENCE HYAM announces that his New Stock of Clothing for the Season of 1860, consisting of the largest and choicest variety of Spring and Summer attire ever designed, is now ready for inspection, and to which he solicits public attention and patronage. The greatest confidence may be placed in the durability and style of all garments, combined with the utmost economy in price.

LAWRENCE HYAM invites attention to his Surtout and Dress Coats, varying from 25s to 50s. The Material, Style, Fit, and make are perfect, and cannot fail to give general satisfaction.

LAWRENCE HYAM'S Spring and Summer Overcoat and Undress Jackets are first in fashion, serviceable in wear, and beautiful in design. Price, 16s, 21s, 30s, 42s, and 50s.

LAWRENCE HYAM'S Guinea Coats, 38s Suits, 15s and 17s Trousers, and 6s Vests, are "Household Words" in every family. An immense variety of the newest patterns to select from, specially made for the Spring and Summer Season of 1860.

LAWRENCE HYAM'S Ordered Department is complete in all its arrangements. The most talented cutters and best workmen only are employed, whereby perfection in Fit, Elegance, and Style, are always secured at moderate prices.

Observe—The only Establishments of Lawrence Hyam are:—City, 36 Gracechorch street; West-end, 189 and 190 Tottenham court road.

MODERATE PRICES WITH GENERAL EXCELLENCE.

E. MOSES AND SON can confidently assert, that they possess advantages and facilities which are quite beyond the reach of any other House in the Trade, and are thereby enabled to offer a REALLY GOOD ARTICLE AT A VERY LOW PRICE. The most skilful Cutters are employed, and durability of material and workmanship may be relied on.

The BESPOKE TAILORING DEPARTMENT is almost daily replenished from the best Home and Foreign Markets.

The READY-MADE CLOTHING DEPARTMENTS are furnished with an immense assortment of goods for all classes, and all occupations. Also, a great variety of Clothing for Juveniles of all ages.

The HOSIERY and DRAPERY, HAT and CAP, and BOOT and SHOE DEPARTMENTS, contain a carefully selected stock of the best and newest Manufactures.

N.B.—Should any article not be approved of, it will be exchanged, or the money returned.

Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET and HART STREET

And Bradford and Sheffield, Yorkshire.

EAU-DE-VIE.—THIS PURE PALE BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO., Old Furnival's Distillery, Holborn.

To be obtained only at their Distillery.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Worm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers.

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell	Mr W. Duncan Davison
Mr W. R. Sams	Mr Jules Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS.

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Havover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE's Two-Hole Black Pens, 46 King William street, London bridge."

—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer,

Mr WHITE, 228 Piccadilly London.

Price of a single Truss. 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c.,

for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER, 228 Piccadilly, London

ANOTHER CURE OF ASTHMATIC COUGH

by Dr LOCOCK'S PULMONIC WAFERS.—From Mr J. Richardson, Bookseller, Seaham, May 1, 1860—"Gentlemen,—Having for some time been troubled with asthma and cough, and not being able to get any medicine that would relieve me, I was recommended to try Dr Locock's Pulmonic Wafers, and before I had finished one box I was nearly well. Whenever I get a cold and return of cough I take some of the wafers, which give me immediate relief. I feel it my duty to let you know, hoping it may induce others who suffer from those complaints to give the wafers a trial. A friend of mine, Captain Dinsdale, has used them with similar results.—I am, Gentlemen, yours, &c., T. B. BROWN." To Singers and Public Speakers, Dr Locock's Wafers are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all druggists.

HOLLOWAY'S OINTMENT AND PILLS.

—Obstacles overcome.—The dyspeptic, consumptive, and all suffering from congestion or disordered action of any organ, may be relieved of their maladies by the diligent use of these two inestimable remedies. The Ointment penetrates to the affected part, whether situated near to, or remote from, the skin, and acts most genially with the Pills in removing all obstructions to the free circulation of pure blood through the deranged organ, over which this Ointment should be rubbed as briskly as possible without increasing pain, or producing an additional pang. By such a course, every obstacle to circulation, secretion, and excretion will be overcome, and each function resume its natural state. Vigour, vivacity, and health will reward the patient's diligence.

NO MORE MEDICINE.—

For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 56,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food.—In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and Incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most infeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 64,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 35s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. 181 Piccadilly, London; Ahbls, 60 Gracechurch street and all grocers and chemists.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts). 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

VALUABLE INFORMATION.—

GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

ENGRAVING AND PRINTING.

HENRY BRADBURY AND CO.,

BANK-NOTE MANUFACTURERS,

FOREIGN, ENGLISH, AND COLONIAL;

Designers, Engravers, and Printers of Bonds, Coupons, Bills of Exchange Cheques, Certificates, Drafts, Shares, &c.

MERCHANTS and BANKERS are respectfully informed by HENRY BRADBURY (late of Whitefriars), that the Business of BANK-NOTE ENGRAVING and PRINTING, which, under his personal direction, has hitherto been carried on by Messrs BRADBURY and EVANS, is now conducted by a separate Firm under the title of HENRY BRADBURY and CO.

"TIMES' City Article, January 28, 1860:—"A Series of Specimens of Bank-Note Engraving of a very remarkable character has just been issued by Mr Henry Bradbury, who has spent some years in perfecting that art. Apart from their beauty of design and finish, they present the essential advantage of being producible only by machinery so costly and so complex as to prevent all chance of successful forgery."

*** The above Specimens may be had upon application.

OFFICES: 12 and 13 FETTER LANE, FLEET STREET, E.C. (Facing Her Majesty's Record Office.)

TRADE B/P MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—

The LANCET states, "This is superior to anything of the kind known."—The most wholesome part of the best Indian corn, prepared by a process patented for the Three Kingdoms and France, and wherever it becomes known obtains great favour for Puddings, Custards, Blancmange; all the uses of the finest arrow root, and especially suited to the delicacy of Children and Invalids. —BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Manchester, Dublin, and London.

ALLSOPP'S PALE OR BITTER ALE.

—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the March Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments.—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William st. City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	St Vincent street
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the labels can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

A TOILETTE REQUISITE FOR THE SPRING.

—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

FREDERICK DENT,
Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

PIESSE AND LUBIN'S SWEET SCENTS.—FRANGIPANNI, KISS-ME-QUICK, WHITE-ROSE, and others from every flower that breathes a fragrance; in bottles 2s 6d each, or three in a case 7s. Sold by every Fashionable Druggist and Perfumer in all parts of the world.
Laboratory of Flowers, 2 New Bond street, London.

SEQUELIN'S OIL.—This vegetable preparation is an infallible restorative of the human hair, producing its growth, checking its falling off almost instantly, and imparting to it unequalled softness and brilliancy. Testimonials and references on application. One bottle is sufficient. Price one guinea. Sold by S. Sequelin, 40 Wharton street, Lloyd square, W.C. London agents: G. Jozeau, 49 Haymarket, and Metcalfe, Bingley, and Co., 130B Oxford street.

ALLEN'S PATENT PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand London

SOYER'S SULTANA SAUCE Relish, Succulanie, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

SAUCES.—CONNOISEURS have Pronounced LEA and PERRINS' "WORCESTERSHIRE SAUCE" one of the best additions to Soup, Fish, Joints, and Game. The large and increasing demand has caused unprincipled traders to manufacture a spurious article; but the "GENUINE" all bear Lea and Perrins' name on Bottle, Label, and Stopper. Sold by Crosse and Blackwell, London, and all respectable Oilmen and Grocers. Sole manufacturers—Lea and Perrins, Worcester.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."
6 Edwards street, Portman square, London.

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture Manufacturers 196 Tottenham court road W.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.
CHEAP, LIGHT AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates
1st. It is a non-conductor.
2nd. It is portable, being packed in rolls, and not liable to damage in carriage.
3rd. It effects a saving of half the timber usually required.
4th. It can easily be applied by any unpractised person.
5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.
Price ONE PENNY PER SQUARE FOOT.
CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and
DRY HAIR FELT, for Covering Steam Rollers, Pipes, &c., preventing the radiation of Heat, and saving 20 per cent. of Fuel.
Samples, testimonials, and full instructions, on application to CROGGON and CO. 2 Dowgate hill, London and at 2 Gores Piazzas, Liverpool.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

HEAD OFFICE—No. 9 ST ANDREW SQUARE, EDINBURGH.

ESTABLISHED 1815.

This Society is constituted on purely Mutual principles. The Members (Policy-holders) alone form the Society, there being no Proprietary Body (Shareholders) controlling its affairs and participating in the Profits arising from the Contributions of the Members. The whole funds belong to the Assured, and the profits are divided among them alone.

These principles have found very extensive acceptance in the past operations of this Society, having been applied in such a way as to afford the simplest returns to the members, while, at the same time, careful regard has been had to the establishment and preservation of that unquestionable security, which is essential in the business of Life Assurance.

The Realised and Invested Funds at 31st December last Amounted to
THREE MILLIONS FIVE HUNDRED and EIGHTEEN THOUSAND TWO HUNDRED and THIRTY POUNDS,
which exceeded the whole Liabilities, and yielded a Surplus Fund of
NINE HUNDRED and NINETY-TWO THOUSAND SIX HUNDRED and THREE POUNDS,
out of which there was reserved as a Guarantee Fund
THREE HUNDRED and THIRTY THOUSAND EIGHT HUNDRED and SIXTY-EIGHT POUNDS,
and the remainder of this Surplus Fund
(Less an unappropriated Balance of £11,860), amounting to
SIX HUNDRED and FORTY-NINE THOUSAND EIGHT HUNDRED and SIXTY-SEVEN POUNDS,
being divided among the Members according their respective rights, yielded a
BONUS of from £1 12s 6d to £3 6s per cent. per annum on the original sums assured,
besides providing a prospective Bonus upon an increased ratio for such policies as shall become claims prior to next division of Profits, all which taken together are equivalent to
An AVERAGE BONUS of £2 5s 8d per cent. per annum, one of the largest Bonuses ever declared by any office.

Viewing the Policies of the SCOTTISH WIDOWS' FUND simply as Investments for Money, a Table, attached to the Report read at the Annual General Meeting of Members held on 25th May, 1860, shows the lowest Bonus declared (on Policies newly opened) to be 58½ per cent., and the highest Bonus (on the oldest Policies) to be 111 per cent. of the Premiums paid. Thus, in the latter case, more than the whole premiums paid have been added in bonuses, the interest alone has been more than sufficient to provide the original sum assured.

For example:—

	£	s	d
A. B., aged 33, opened a Policy in 1819, for	1,000	0	0
There has been added as bonuses	1,262	1	5
Present amount of Policy	2,262	1	5
Deduct from this amount the Principal of the whole Premiums paid	1,136	0	7
The difference shows the Amount of Insurance purchased by the Interest alone	1,126	0	10

Being an improvement of Money which may challenge comparison with many other modes of investing sums of small amount, the advantage of an assured sum in the event of death at any time after the commencement of the Policy being also secured.

The Substantial Benefits accruing under the Society's System are not confined to a favoured class of Policies, but are proportionally distributed among the whole body of Assured Members.

New Entrants may safely rely on the continuance of a Scale of Bonus as ample as that which has hitherto prevailed, because, irrespective of a permanent guarantee fund, the margin of Profit in the Premiums payable, which forms the main index of any Life Assurance Society's Bonus-giving power for the future, remains wholly untouched in the additions hitherto declared.

The magnitude and select character of the Business,—the very small average of Expenses of Management,—the favourable rate of mortality and interest,—and all the other elements productive of Surplus, are therefore combined in the position and prospects of the Society, and afford inducements and guarantees to intending Assurers of the most satisfactory kind.

The Directors, in terms of the Constitution and Bye-Laws, afford to Members every facility and privilege consistent with due regard to the general interest of the Society.—In particular—

(1.) Declared Bonuses may be surrendered for present cash, or applied in reduction of future Premiums, the right to share in subsequent Divisions on the Sums remaining Assured not being thereby lost.
(2.) Surrender Value is allowed upon every discontinued Policy, although no more than One Premium has been paid.
(3.) When Policies attain the value of £50, Loans are made to Members without expense, and at a medium rate of interest, as upon first-class securities.
(4.) Members are permitted to Travel and Reside in any part of the World, either without charge, or subject to moderate extra rates of Premium suitable to the risk.
(5.) In the Settlement of Claims, the wishes and convenience of parties are carefully attended to, and the full sums due are made payable without charge in any part of the Kingdom.
(6.) Members are allowed, without any Extra Charge, to serve in Volunteer Rifle and Artillery Corps, within the United Kingdom.

Reports, Prospectuses, Forms of Proposal, and all information, will be promptly supplied from the Head office and Agencies.
June, 1860. SAMUEL RALEIGH, Manager.

LONDON HONORARY BOARD.

George Young, Esq., Mark lane.
Charles Edward Pollock, Esq., Barrister, Temple.
David Hill, Esq., East India House.
John Murray, Esq., Publisher, Albemarle street.
Samuel Lang, Esq., M.P.
Sir John Thomas Briggs, Admiralty.
Leonard Horner, Esq., Home Office.
James Anderson, Esq., Q.C., Lincoln's inn.

AGENTS FOR LONDON AND THE SUBURBS.

CENTRAL AGENT.
Hugh M'Kean, 4 Royal Exchange buildings, Cornhill.

DISTRICT AGENTS.
Major R. S. Ridge, 49 Pall Mall, Agent for the West-end District.
James Harris, 38 St George's square, Belgrave road, Pimlico.
Benton Seeley, Islington green, Agent for Islington District.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Baryte, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

THE CHINA VOTE.

THE House of Commons have adjourned, after a twice repeated and not very fruitful discussion on the China vote, without hearing the Chancellor of the Exchequer's statement as to the mode in which he proposes to raise the additional supplies for the current financial year,—the Supplementary Budget standing deferred to next week. It is generally understood, however, that no additional taxation can be imposed, and that the sum needed both for this purpose and for the National Defences must be borrowed. This understanding served to some extent to diminish the intensity both of the interest and the distaste with which the expense of the new Chinese war is regarded, and caused the discussion to hinge more on the political, and less exclusively on the financial aspects of the vote. We trust that it may not be altogether fruitless, and that the rather reckless character of our recent Oriental policy has received a check from the consequences of the Peiho disaster, which neither Liberals nor Tories will be likely soon to forget.

In the debate of Thursday night, Mr Gladstone, as his custom is, deduced for us a very wholesome lesson from the unwelcome circumstances which necessitate the Supplementary Budget. "It is very desirable that we "should if possible draw some lesson from it, and I "confess the lesson I draw is this, that it is impossible to "check proceedings of this kind growing out of transactions "such as the deplorable events at the mouth of the Peiho, "when once they begin. What you should really look to is "your mode of conducting your ordinary communications "with such distant Powers, and the responsibility under "which they are conducted. It is an extremely dangerous "system of policy which sends forth treaties to be exchanged "at the sword's point and at the cannon's mouth." We entirely agree with these observations, and we scarcely know any element in the finances of this year which causes us greater regret than the China loan which now seems imminent. It is not simply that it is a loan; for the two millions or upwards which will probably be borrowed at once by way of beginning to carry out the scheme of the Commission on National Defences will cause us no uneasiness. It is not the extent of the loan; for even coupling it with the first instalment of the Defence Loan,—which will we believe be borrowed in terminable annuities,—a loan of five millions or a little more will not greatly affect the resources of England. But it is the knowledge that the money is to be spent on redeeming a fatal error, and that in all probability the means chosen to do what we can in redemption of that error will in every way darken, instead of brightening, the prospect of our future relations with China. If, indeed, the National Defence loan is to be contracted in terminable annuities, on the ground that the present generation ought to bear the burden, we think the same rather fanciful reason applies with tenfold force to the China war. The fortifications, if solidly constructed on a right principle, will at least be a heritage that we shall leave to our children, and not only so, but the danger which it is their purpose to guard against, is a danger which might affect the history of future generations almost as injuriously as it would affect the England of to-day. But the impending China loan is a loan which will create nothing that we can hand down to future generations,—which is likely enough to multiply evils even graver than that which we are trying to remove. The 3,800,000*l* now asked for is wanted in order to wipe out the disgrace of a shameful and treacherous defeat. But the defeat was brought upon us by a policy unpardonably meddling and imperious; and the remedy is likely enough to be worse than the disease. If we succeed—as we most likely shall succeed—in shaking to its centre a power already crumbling to pieces; if we penetrate to Pekin and dictate a fresh treaty to the Emperor of China at the point of the sword, the result will only be that an Empire already disorganised will be still further weakened,—that a rebellion which is already assuming the shape of an undefined anarchy will gain strength without gaining either meaning or purpose,—and that the supplementary task may be almost forced upon us of attempting to bind together again the broken fragments, — of restoring to the Emperor of China an authority which we have ourselves done our best to shatter. And all this will have to be done under the restraints of our hampering alliance with the French,—under the double condition of having to act in concert with an ally who is less disposed to concession than we are, and yet of whose military prestige our own officers are disposed to be in no small degree jealous.

It is true that the responsibility of this war is so equally divided amongst our statesmen, that no party is in a position to bring recriminations against any other. The original source of the evil is the stringency of Lord Elgin's treaty, which attempted to wring out of the Chinese, concessions profoundly distasteful to the Emperor of China, and extremely unnecessary for us. Lord Elgin was the nominee of Lord Palmerston, but the treaty which he concluded was concluded under the Administration of Lord Derby, was approved by that Administration, and the instructions of Lord Elgin's successor were drawn up by that Administration. There can be no doubt that the misfortune which we are now deploring is the general fruit of the overstrained policy of Lord Elgin's treaty, and that Mr

Bruce's enterprise in the Peiho was conceived in the true spirit both of Lord Malmesbury's instructions and of Lord Elgin's own exploit. It was not for Sir John Pakington, therefore, as he himself evidently felt, to protest against the present expedition. All parties alike may share the humiliation and the reproach of a policy that has more of prestige than of moderation and forbearance. And all parties alike should join to recommend earnestly to our diplomatists to extricate us from this unfortunate war at the earliest practicable moment,—to remember that we ought not to exact a very punctilious reparation, when we somewhat wantonly wounded the pride which led to the insult. Let us remember that every penny of this loan which is spent in prolonging the war by a single needless moment, is expended on pure and absolute evil,—in extending anarchy, and bringing on ourselves the responsibility of governing the Empire the authority of whose *de facto* Government we destroy. And if the loan be so expended, the interest of it, we may be sure, will long be paid by our posterity in the suspicion, hatred, and fear with which we shall be regarded in the East.

THE INEXPEDIENCY OF MARITIME ARSENALS.

It seems certain that we do too much on the sea-coast. We have concentrated at our great naval stations, such as Portsmouth and Plymouth, not only the machinery needful for constructing ships and for repairing ships, but also our depôts of naval stores, our victualling yards, our rope yards, and our timber yards; we have made of them not only naval docks, which they must be, but naval arsenals, great storehouses of material, which they need not be. We have not only put together there our ships of war, but we have manufactured there all the multifarious and complicated gear that belongs to those ships. We have done on the sea-coast not only that which can be done nowhere else, but much also which could be done everywhere else, if not quite so conveniently, yet on the whole substantially as well.

We have, in truth, half forgotten that the sea-coast is our exposed frontier, and it is very natural that we should forget it. During the greater part of the last great war our coast was only exposed in theory. Before the accession of Napoleon to the Consulate in 1799, there was not the slightest real danger; and after the battle of Trafalgar in 1805, when the French fleet was practically destroyed, there was no real danger. We were only threatened during six years. The danger was only imminent during a much shorter time. We have generalised from this experience. We have habitually thought that our naval supremacy was undisputed, and, under the old system, we were right in so thinking:—a long experience established the fact. But under the system which now prevails we have no right to presume that such will be the case. On the contrary, we may expect the reverse. We have no fear that our fleet will not *ultimately* be victorious over any opponent; we believe that our sailors are the best in the world,—that our nautical experience is greater than that of any other nation,—that our fleet is, ship for ship, equal to any other to be found in the world. But we know that temporary failures are possible, and unfortunately recent inventions make the possibility of temporary failures terribly important. Steam renders time incalculably more efficient than it used to be; three or four days' command of the Channel would give an enemy much greater means of attack than it would have formerly; and, even after a drawn battle, the enormous power of the newly-discovered artillery may render our fleet half helpless for many days. We cannot expect our sea-coast to be secure hereafter. Even if serious invasion should not be contemplated, minor descents and casual depredations are all but certain; and the most tempting points for an occasional descent would be great storehouses of warlike material, the contents of which might soon be destroyed, and, if destroyed, could not be replaced in months or years.

We have, however, a resource which during the last war we had not. We had then, it is true, an entire command of the sea, but we had not, if we may be pardoned the expression, the command of the land. We had no such rapid means of land transport and land communication as we now have. We could not send a message in an hour from Plymouth to London; we could not send in a single night vast stores of whatever kind from almost any part of the interior to almost any part of the coast. We were then obliged to have on the edge of the water everything which we wished to use for our fleet. We were then compelled to do that which we now continue to do from habit. Fortunately, when we were obliged to place on our exposed frontier much which was most valuable to us, it happened that this frontier was comparatively secure; but now, when the risk of a maritime situation is become greater, it is equally fortunate that we need no longer place in a maritime situation nearly so much as formerly.

A maritime arsenal, in the strict sense of the word, is unsuitable to our circumstances. The slips that are needful to build ships; the graving docks necessary to repair them; the gridirons or other inventions needful to see whether they need to be repaired; in a word, the *instruments* of construction and of repair must be on the sea-coast. But the materials need not be there. Our stores of seasoned timber may be kept inland; much of it, and more, perhaps, of the iron for our iron ships might be put into shape there; our cordage might be made inland, and kept inland; our sails might be so too. At the present day only the minimum of machinery should be kept on the sea-shore, and that minimum is, in comparison with that which we now keep, but very small.

It is not sufficient to argue that the great naval stations, such as Plymouth and Portsmouth, should be made secure. They should be made of as little importance as possible. The best evidence of this is the Report of the Commissioners on the National Defences, who have carefully inspected these places. At present it is admitted that they are very insufficiently protected. But must they not always be dangerous places? The Commissioners tell us that they think it needful to provide against "long-range bombardment," and that the practical range of effective artillery for such a bombardment "cannot be taken at less than 8,000 yards." Sir William Armstrong calls it in round numbers five miles. But if we are to protect our great naval stations from *every point for five miles round*, even with the advantages of natural situation which some of them have, we shall have much, very much to do. Even after we have done all which we can, we shall doubt if we have done enough. Engineer officers will prove to us that *they* could take these places with facility, and we shall not be able to answer them, even if we do not believe them. And even if we made these ports mathematically secure to-day, they might become insecure. Military science is in a state of transition; some new invention might spoil the perfection, and even impair the principle of our whole work. We may be sure that we ought to keep as little and to do as little as possible in places which are very open to attack, and are very difficult to defend.

We should rely on common sense as well as on walls, and the principles of common sense seem to be these:—

First. We should maintain no permanent depôts of naval or military stores in maritime situations, and only to keep at them the requisite *minimum* of constructive machinery.

Secondly. We should make no one dockyard essential to our safety, even for the machinery of construction or repair. We can never know that some terrible chance may not in a moment deprive us of any one seaport, for all seaports are now really and practically exposed frontier towns.

Thirdly. We should establish such inland depôts as may be needful; and, though this may be expensive at first, it will not in the end be dearer, if it will be so dear, as the course we had to adopt in the last great war. Each dockyard was then to a considerable extent an absolutely separate establishment. Portsmouth and Plymouth were then so far apart that it was impossible for each to supply early and promptly the deficiencies of the other. But if we should now establish inland arsenals for naval stores, we could in a few hours, and at a short notice, send them to the dockyard at which they are required. The Commissioners recommend the formation of a military arsenal in the centre of England; and the same principle applies with equal force to the manufactories and depôts of naval necessaries. It is well to spend a moderate and reasonable sum to fortify such dangerous places as Plymouth and Portsmouth; but we should do there as little as we can, and we should not then expend upon them a greater sum than is really required.

THE NEW ZEALAND REBELLION AND ITS APPREHENDED EXTENT.

We have been silent hitherto concerning the New Zealand rebellion, because the materials for judging of the nature and full extent of the danger were not before us. Since the arrival of the mail on Thursday we have, however, received intelligence from the seat of Government on which we can implicitly rely, that enables us to form some clear estimate of the probable range and causes of the native disaffection; and we confess that the uneasiness which the local outbreak at New Plymouth caused us has not been in any way removed, but strengthened and deepened, by the new aspects of that symptomatic collision which are now opened to us. The extraordinary mismanagement of military affairs at New Plymouth by Colonel Gold, however exasperating it must be to the two thousand colonists of that little settlement, would be a fact scarcely deserving of comment,—except as one further illustration of that remarkable incompetence of our military officers to meet sudden emergencies which has been so often recently tested and proved,—but for the risk of a general native rebellion which this ostentatious incapacity seems not unlikely greatly to enhance. Unfortunately, as we hear on high authority, the natives are profoundly impressed with their own superiority to the English in the art of war,—an impression which the poor success of our military adventures in that country have done much to strengthen. In a recent Maori Council, the precedents of their former superiority to the English were hopefully enumerated. And certainly the very brilliant operations of Colonel Gold, who was, at the last advices, holding within the town of New Plymouth a garrison numerically twice as strong as its native assailants, and this at a moment when far more powerful tribes were still hesitating whether or not they should cast in their lot with the insurgents or with the British Government, cannot but tend to renew the modest confidence of natives in the superiority of the Maori to the English soldier which was then expressed. However, with this matter at present we have nothing to do. Were the quarrel at New Plymouth purely local, no mismanagement could swell it into a risk of very large dimensions. But when we know how extended is the network of native disaffection in the Northern Island, every consideration which will be likely to kindle that disaffection into active rebellion becomes important.

But, as we have already intimated, the quarrel about the sale of land at Taranaki is not an accidental phenomenon which can be properly regarded apart from its connection with a wide-spread fermentation in the native mind. The evidence before us goes to prove, on the contrary, that their case is rested by the natives themselves not on the terms of any special contract, but on a general political dislike to any further acquisition of lands by the English settlers. It is not denied that the native who sold the disputed land had a legal title to it. No claim is made for that land on behalf of any one else. But the native Chief of the district, whose title to the position and authority of a Chief is itself disputed by the pacific native party in the district, objects to the principle of the sale, and professes himself determined to disallow any sale to the English, just as the Emperor of France would declare any transfer of French territory by a French corporation to the English Crown, whether in return for money or otherwise, as null and void. It is not on the plea of conflicting property-claims, but on the higher ground of a claim to political allegiance that the native leader at Taranaki, W. Kingi (or William King as he is called), grounds his right to veto the sale now in dispute. And it is this which makes the danger so great. Not only amongst the small tribes already revolted, but among all the inhabitants of the Northern Island, there has been a long and steady growth of jealousy at the territorial encroachments of the English. As far back as 1854 a proposal to constitute a strong native State under a King of the most powerful of the New Zealand tribes (the Waikatos) was already broached. At first this scheme was supported by many who had no wish to undermine the British Government. It was advocated as a means of organising the utterly disorganised tribes of natives, and subjecting them to some fixed form of government that they were competent to respect. In this aspect it was rather smiled than frowned upon by the British Government. But soon the movement took a much more dangerous form. It was soon accompanied by the assertion that the native King must be superior within his own jurisdiction to the British Queen, and by a systematic opposition to all further alienation of the New Zealand soil. This dislike to the alienation of wild lands has a deep root in all the Maori tribes. They like to enjoy vast proprietary rights in hundreds of square miles of tangled bush. They dread above all things the gradual encroachments of civilisation on their domain. Accordingly the Government of New Zealand apprehend that there is no small danger lest a large proportion of the tribes living to the South of Auckland in the Northern Island, including the Waikatos, may be gradually drawn into the confederacy against the British Government. At present the active hostility is exceedingly circumscribed. But W. Kingi (the head of the Taranaki insurgents) has already sent a deputation to the Chief of the Waikatos imploring aid, and recognising that Chief as the Maori King. It does not appear that his prayer has as yet been granted. But the old Chief of the Waikatos,—till now a firm adherent of the British Government,—has been removed by the war party from his old residence near Auckland, to a residence between Auckland and New Plymouth, more remote from English attraction, and more completely within the spell of native influences. Here it is hoped that he may be induced to head a general revolt among the Waikatos.

It would be a great mistake, therefore, to suppose that the Governor of New Zealand has been induced by any over-eagerness or cupidity of the settlers to embark in an unjustifiable struggle with the natives. On the contrary, the precautions taken to prevent any unjust encroachments on native rights have been so numerous and constant as to excite in the settlers a deep feeling of dissatisfaction with the Government. Unless the Governor had been prepared resolutely to refuse *all* native offers to sell land, however good the title shown and however honest the desire to sell, the present crisis could not have been avoided. It is obvious that such a resolve would have been to pass a sentence of political death on the English settlements, which can thrive only by a regular enlargement of their present narrow limits. The only alternative, therefore, was to buy from those natives willing to sell, so far as they could make good titles to their property; and it has been while acting in the strictest way upon this rule that the present collision has taken place. The offer to sell which first originated this quarrel was publicly made to the Governor before an assembly of natives in March, 1859. Before accepting the offer, a period of eight months was given to rival claimants to put in their claims. None such appeared, and the bargain was, therefore, closed, and the first instalment of money paid in November of last year. The legitimacy of the Waitara purchase is disputed by none; and, in reality, it is only the occasion for educing a last stand against English influence. The very tribe who have most completely barred their own right to complain,—the Waikatos, who formally ceded in 1842 their right in this land to the Crown,—are ripe for rebellion. Everywhere South of Auckland "the determination to shake off the British dominion has been steadily "gaining ground." If the Governor had not taken his stand when he did, he would have been forced to resist at greater disadvantage to himself, when the organisation of the native tribes had been more firmly cemented. He chose his ground well, and had he been better supported by his military subordinates, a check to native pretensions might already have been administered severe enough to overthrow for the present all schemes of insurrection. We earnestly hope that forces will be at once placed,—nay, already have been placed,—at the disposal of the New Zealand Government, which may enable it to overpower all opposition, and so to prevent the fierce and bloody struggle which may otherwise ensue between settlers and natives. Already the treachery and bloodshed on the part of the natives has worked its natural result on the settlers, and too many even of the better class among them begin to talk of the "niggers" with that vindictive and vulgar contempt which characterises the feeling of the English in India towards the Hindoos, and the Americans towards their slaves. If this feeling works itself out in a struggle such as may be well feared where the native forces and English settlers are so nearly matched, there must for a long time be an end

to all humane relations between the English settlers and the aborigines of New Zealand. A force ought at once to be placed at the disposal of the Governor sufficient to enable him to avert the struggle altogether, and to keep equal the balance of justice between the English settlers and the restless tribes, who, conscious of their own decay, hit from time to time on these rash and headlong remedies.

MR KINGLAKE ON SARDINIA.

We regret to see Sir Robert Peel and Mr Kinglake gradually transmuting their championship of Savoy into a crusade against Sardinia. Mr Kinglake's political "information" may, for anything we know, be of the most accurate kind; it is quite possible that one of the Emperors present at Villafranca may himself have communicated to Mr Kinglake the French proposals which he revealed on Thursday night to a horrified House of Commons; it is possible that Count Cavour may himself have conveyed to Mr Kinglake his intention of supporting a French attack on the Rhine by a Sardinian attack on the Mincio,—all this we do not in the least deny to be possible, though we must remember that the most authentic private "information" is very much oftener fabulous than correct in these matters,—but if it were all true, we should see no reason to justify these gentlemen who are so eloquent on behalf of Switzerland in their attacks upon Sardinia, and their disregard of Italy. It is not now for the first time that England has suspected France of interested purposes in her Italian policy. Mr Kinglake's information may be true or false,—in either case alike we should be chary of trusting the generosity of France, and inclined to suspect less worthy motives. But, whether true or false, the result remains that French policy, selfish or otherwise, has been overruled for the good of Italy; the French have not been able to control the spirit they have aroused, and, with the co-operation of England, that spirit has at length gone far towards achieving Italy's independence both of Austria and of France.

And this, being as it is, how, we ask, can these eloquent gentlemen employ their talents to more mischievous purpose than in attempting to persuade Englishmen that England ought to resist and even veto the annexation of Sicily to Sardinia? Quite apart from all question as to the bearing of that annexation on Italian affairs, it is difficult to see how England could more effectually play into the hands of French ambition than by pursuing so false a policy. It was just so blind an opposition to France that placed England in a false position, and leagued her with all the despotisms during the last great Continental war. Granted that France is not sincere in her professed wish for Italian liberty,—granted that she secretly wishes to establish in Italy a dependent kingdom that may prove a useful tool for French diplomacy; this may be so, and yet the most hopeful as well as far the most honest policy for England is to take France at her word while she is ostensibly favouring the independence of Italy, and only to step in with opposition when her insincerity becomes manifest. Were England to act as Sir R. Peel advises, and to veto the annexation of Sicily to Piedmont, in the fear that France will demand some equivalent for the annexation of Sicily likely to endanger our supremacy in the Mediterranean,—were England to pursue so craven and selfish a policy as this, the only result would be that she would enable France to carry out her own designs with far greater ease than would be otherwise possible. France would not care to annex Genoa except for the sake of extending her influence in Italy. If she could place a subordinate ally in Italy ready to catch her hints and work her will, she would have accomplished all she desires. The possession of Genoa, if France were once induced to claim it in the teeth of the growing suspicions and disgust of Europe, would be but an uncertain means to this end. And this end would be facilitated a thousandfold, without any attendant danger, by the mean policy to which Sir Robert Peel and Mr Kinglake urge on Lord John Russell. If once England become associated in Italy with the policy of opposing Italian unity,—if France could throw upon us the odium of that great crime and mistake, her purpose would be answered. The only chance of neutralising French influence in Italy is to unite Italy. If Italy be divided into three or four parts, North Italy, Rome, Naples, and Sicily,—and Naples and Sicily can never, we believe, be united under one Liberal Government, unless that Government be considerable enough in its own power to quench the mutual jealousies which run so high between them,—France can always make her voice heard there, and heard with authority. Even now her influence in Piedmont is on the wane, simply because Piedmont herself is on the increase. Let Sardinia's hopes be quenched, let her career be closed, let her become once more too weak to cope with Austrian Venetia unless supported by France, and France would again dictate at Turin the fate of Italy. The truth is, that Sir R. Peel and Mr Kinglake, in their probably well-justified distrust of France, are condescending to urge a thoroughly unworthy and unnational policy on England. In their frantic alarm of France, they re-echo the dull Conservatism of Prussia, and lose sight entirely of the noble cause for which Garibaldi is fighting. The crooked purposes of France may yet be overruled, if England rejects entirely a policy equally crooked, and openly espouses the true cause. But if we are to attempt to countermine the influence of France in the Mediterranean by a policy as tortuous as her own, and in pursuing that policy to sacrifice the welfare of Italy,—we shall soon find our recompense in bringing down the hostility of France upon us after we have deservedly lost the sympathy of all the honest part of Europe. Sir R. Peel and Mr Kinglake should ally themselves with Lord Malmesbury. It is to his nervous, fidgetty, and undignified policy that they are now giving in their adherence.

THE SUGAR TRADE.

Some valuable returns which have just been laid before Parliament give a very striking view of the increased consumption of sugar in this country, and the relative progress (or decline) of the various sugar-producing colonies and countries during the last sixty years. For us, however, the period which has elapsed since the reduction of the differential duties on foreign sugar in 1846, with a view to their subsequent abolition, will be the period of most importance. But before showing the growth of the foreign sugar imports since that period, we will put our readers in possession of the previous growth of the English demand. The amount of unrefined sugar retained for home consumption in the United Kingdom, at intervals of ten years up to 1846 (of which, of course, all but the most trivial items is of colonial growth, the differential duties practically excluding all foreign sugar from the English market), is shown in the following table :—

Sugar Retained for Home Consumption.

	cwts.
1805	2,555,017
1815	2,523,366
1825	3,271,385
1835	4,022,841
1845	4,836,624

We now give the returns at intervals of five years since 1846, distinguishing the foreign and colonial sugar :—

Sugar Retained for Home Consumption in the United Kingdom.

	Colonial. cwts	Foreign. cwts	Total. cwts
1849	5,409,209	496,478	5,905,687
1854	5,589,467	2,439,291	8,028,758
1859	5,129,058	3,512,862	8,641,920

Whence we see that, while the colonial supply has not fallen off, but, on the whole, decidedly increased in consequence of the free competition with foreign sugar, the total consumption in England has increased 80 per cent. since the first step towards the equalisation of the sugar duties in 1846.

This result is not less satisfactory when we come to look at the sources of supply. In respect to Mauritius, Barbadoes, Trinidad, and Demerara, there is certainly little reason to complain of the result. It seems to us evident that the stimulus to industry caused by the measure of 1846 has been great, and that lower prices have been counterbalanced, as Lord Grey expected when he introduced his measure, by more effective labour. We give the returns as follows :—

Unrefined Sugar of Colonial Produce.*

	1845 cwts	1849 cwts	1854 cwts	1859 cwts
Mauritius	716,233	897,840	1,662,189	1,169,341
Barbadoes	351,485	489,130	666,464	591,368
Trinidad	364,152	424,399	537,247	538,150
Demerara	499,102	515,782	806,462	736,655

* These returns include some trivial amounts of sugar of foreign produce passing through these colonies on its way to England.

These returns, on the whole, show a very considerably increased industry since the repeal of the differential duties; and when we consider that those duties never really suc-

ceeded in keeping down the demand for slave-grown sugar, but simply affected its distribution, it is probable that the gain in the case of these colonies is nearly unmixed. It is, however, exactly these colonies which have had the best and most abundant supply of labour:—Barbadoes, from the happy accident of its formation, which leaves no room for idle squatters,—Mauritius, from its supply of immigrant Coolies,—Trinidad and Demerara from the same cause, though in their case less efficiently worked. We must look to the case of Jamaica if we want the debit side of the account. And certainly, from whatever cause it may arise, Jamaica's exports have steadily fallen off. Its exports of unrefined sugar are as follows in the following years:—

	1835	1840	1845	1849	1854	1859
	cwts	cwts	cwts	cwts	cwts	cwts
Jamaica...	1,148,760	518,541	742,867	633,479	505,684	428,925

But Jamaica is the only colony which exhibits this progressive decline in its industry, and it will be remarked that in 1840, many years before the repeal of the differential duties, and thenceforward up to the time of the repeal, the returns are nearly as fluctuating and as low as they now are. It was not the repeal of the differential duties, but probably the Act of Emancipation itself which injured the material interests of Jamaica so deeply. The evil there is not so much that sufficient labour cannot be had at the price necessary for the profitable cultivation of sugar, as that it cannot be had at all.

When we come to look at the foreign producers of the sugar consumed in England, we find that Cuba and Brazil are the principal exporters of our increased consumption. The tables do not distinguish the special sources of the foreign sugar "retained for home consumption,"—but as not more than 13 per cent. of the foreign sugar now imported is re-exported, but at least seven-eighths of it are now retained for home consumption, we may conclude that the returns of imports of sugar from Cuba and Brazil represent of late years something very like the amount of English consumption of those sugars. We find, then, that since 1854 the amount of sugar received from Cuba has been in favourable years more than a million and a half hundredweights, and from Brazil the amount has gradually risen from half a million to one million hundredweights in the same time. It seems that about two-thirds of the foreign sugar we consume is produced by Cuba and Brazil alone. It must not be supposed, however, that our demand has stimulated their production to anything like that amount. It has chiefly affected the distribution of their sugar,—which is sent to England rather than to other nations.

THE DEFALCATION AT THE UNION BANK OF LONDON AND ITS WARNING.

The recent meeting of the Union Bank of London presented a somewhat remarkable contrast. On the one side it was evident that if all the best and the most accepted tests could be relied on, the Bank was an exceedingly good one. It had paid, the Chairman told us, more than 1,000,000*l* in distributed profits; it had accumulated a considerable reserve fund; it had added to capital out of its profits; it had passed through several commercial crises; it was now exempt from any loss when other similar establishments were suffering from the disasters in a large trade; its shares had long been high, and were now, under unfavourable circumstances, at 50*l* per cent. premium; it was able to provide for a loss of more than a quarter of a million out of the profits earned either in this year or in previous years; its Directors had not to propose any diminution of the capital actually paid up; they had only to recommend the withdrawal from the capital account of a sum recently added to it from a reserve fund which was itself the result of the constant prosperity of the Bank. Nothing can be more unanswerable than these arguments. They prove what everybody who knows the City well knows, that the Union Bank is an extremely good Bank. But the question returns, how *can* so good a Bank have sustained so large a loss?—how can an establishment which seems so sound—which *is* so sound—have suffered to such an enormous extent in so anomalous a manner from the undetected dishonesty of a single servant?

It cannot be denied that the report issued by the Directors rather suggests than answers these inquiries. It especially appears that the fraud was of a somewhat more complicated nature than it was imagined to be at first. Every part of the fraud, every item in Pullinger's peculations was, it is true, managed through the account of the Union Bank with the Bank of England. This machinery was sufficient for him, and he was sufficiently clever not to employ any unnecessary machinery. But the mode in which he acted upon the account seems to have been somewhat complicated. The following is the sketch which is given of it by the Directors:—

The precise amount of the frauds is now ascertained to be 263,125*l* 6s 10d, which represents the difference between the balance shown to be due by the Bank of England to this Bank in its own books, and the amount which appeared to be due to it by the books of the Bank of England; and the investigation of the Directors shows that this sum has been disposed of in manner following:—

	£		
Sums credited to four stockbrokers, in their accounts current with this bank, which were not received	84,058	18	0
Sums credited in the same way to a bullion broker (Nathan)	57,559	3	2
Sums credited in the same way to two other persons, customers of the bank (J. Thornhill and Parr)	1,543	15	0
Sums received from the counter cashiers to take up bills, but not so applied	25,463	10	8
Sums credited to various parties, and supposed to be in cheques handed to the counter cashiers, but afterwards withdrawn by Pullinger, and not presented for payment	11,400	0	0
Amount of gold charged as paid to the Bank of England, but not received by it (small amounts of which were abstracted in coin, but the bulk of it is believed to have been exchanged for notes in the office)	83,100	0	0
	263,125	6	10

Without oral explanations and without knowing the particular system of bookkeeping adopted by the Union Bank, it is not possible to follow out the practical consequences of the different operations which are here indicated. But we can perceive that there were at least *two* distinct operations. Pullinger abstracted cash which he said he would pay to the Bank of England; he also directed certain parties—certain customers of the Bank, to be credited with cash which had never existed. He took away some part of the money which really had been there; and he alleged that money had been there which in truth had not been so. For the purposes of ordinary bookkeeping these are different operations. It would also seem that all the cash which was abstracted by Pullinger was not abstracted in precisely the same manner. The two last items mentioned by the Directors, though identical in ultimate pecuniary result, were, for the purpose of the day's business, very different operations. We confess we can hardly believe that frauds so extensive should have been carried on during several years in several different ways, without considerable laxity in the management of the office. We cannot specify where the fraud should have been discovered; without knowing the whole detail, without seeing all the books of account, it is not possible to say where the defect should have been apparent. But we cannot help thinking that in a perfect office, or even in a nearly perfect office, dishonesty so systematic, so extensive, and so ramified, would have in some manner come to light.

We will not say how such a state of things was compatible in the actual case with the real soundness of the Union Bank. We will not pry into the secrets of a great establishment of which the circumstances are of necessity but imperfectly known to us. But we will say—for it may be useful in other cases—how we could imagine that so large a loss *might* have been compatible with such good management. We could imagine that a Board of very competent Directors—of men educated in mercantile life, used to business transactions, conversant with "parties and bills"—might attend day by day at a Bank—might revise its securities—watch its loans—direct its investments—consult most usefully with the Manager on all the important transactions, the "large "figures" of the concern; and yet leave the whole outer office untouched—leave, that is, the whole concrete cash of the Bank exposed to the touch of Mr Pullinger. We could suppose the Manager so occupied in assisting the Directors in these duties—in seeing the innumerable customers of so large a concern—in watching the large loans, and carrying out the large investments, that he had no longer any time, any strength, any mind to do more, to save the actual money in the till from the peculations of his clerk.

We will not say that such things did occur, but we are sure they might have done so. We are sure that they suggest a wholesome warning to those who are responsible for similar large establishments. They are tempted to neglect what

seems to be detail, and to bestow an exclusive attention on what seems to be very important; and it is therefore instructive to observe that a door is thereby opened to frauds like those of Pullinger.

UNSOUND TRADING.

The worst style of trading is exemplified by the state of some of the houses in the leather trade which have recently failed. The balance sheet of one of them, that of J. Herbert Smith and Co., which is but a small one in comparison with others, is as follows:—

J. Herbert Smith and Co.'s Statement of Affairs, June 30.

Dr.	£	s	d	£	s	d
To Creditors unsecured				122,544	9	10
To Creditors holding security—amount of claims	3,880	17	4			
Less security held	500	0	0	3,380	17	4
To Liabilities on bills payable	2,000	0	0			
Less security held by J. H. Smith and Co.	2,000	0	0			
To Liabilities on bills receivable	85,377	11	6			
Of which it is estimated will prove bad	43,562	7	1			
Less balances held by National Bank	683	2	10			
London Joint Stock Bank	488	4	10			
Bank of London	10	0	0			
	1,181	7	8	42,380	19	5
				168,306	6	7

Cr.	£	s	d
By cash in hand			2,707 8 5
By bills receivable in hand	£2,755 11 4		
Estimated to realise			1,172 10 7
By sundry debtors:—			
Considered good			9,342 2 7
Ditto doubtful	4,711 8 0		
Estimated to realise			1,468 1 0
Considered bad	88,811 0 8		
By stock in trade:—Leather, &c., at present prices	20,584 5 6		
Fixtures, utensils, &c.	400 0 0		20,984 5 6
By legacy under the will of the late V. H. Smith, Esq., estimated at	13,000 0 0		
Less—J. H. Smith's note of hand for money borrowed, dated 1844	4,000 0 0		9,000 0 0
By sundry property			3,000 0 0
			47,074 8 1
Less—Creditors to be paid in full			420 0 0
			46,654 8 1

This estate, therefore, only shows at starting 5s 6d in the pound, and what an estate ultimately pays is usually but a small fraction of what it is alleged to be *going* to pay. But this circumstance is not the most remarkable one. The proportion of the bad debts due to the estate to the good ones is extraordinary. The firm is shown to be owed—

	£
On open accounts	102,864
On bills receivable	88,133
	190,996

which are only expected to realise—

	£
Open accounts	10,810
Bills receivable	43,987
	54,797

So that the "sundry debtors," one with another, pay little more than 5s in the pound. No such result could happen unless the person who failed had conducted his business on the principle of giving a preference to unsound customers; and it is not too much to say that a reckless trader at a crisis does feel such a preference. On the one hand, he is mixed up with a number of unsound firms which it is his interest to keep up: he gives a preference to these in order to prop them up. On the other hand, he has to ask assistance from other firms himself, and if, as often happens, these are themselves unsound, he must incur a reciprocal obligation to assist them. In both these ways we may account for the apparent preference which speculative traders have for those of their own class,—a preference which, at first sight, looks like reckless folly.

Again, the bills discounted by this firm seem to be one half of them bad, which would apparently indicate that the discount houses were, in this case, unfortunate in their selection of bills. And such was doubtless the case. The advances made to the leather houses in this case and in others have doubtless been unwise. Nevertheless the insolvent cannot blame the discount houses, even if the public do. If every bill receivable by him were good, the account shows that he could not pay his creditors a decent dividend.

Agriculture.

THE CANTERBURY MEETING.

The district in which the Royal Agricultural Society has this year held its meeting is one which could not fairly be overlooked; but it was not expected to produce, and it has not produced, an exhibition so large or so various as several of the more recent annual shows of the Society. For this there are several causes. Kent is remote from all the stock-breeding districts, and the agriculturists of that county have shown but little disposition to purchase first-class breeding stock. The locality added little to the stock shown, and that little was not of very high character. Then, in the implement department, the quarrel between the Council of the Society and some of the principal firms of agricultural implement manufacturers greatly lessened the display in this department. Again, the neighbourhood is not populous, while the situation is not central, so that such crowds of visitors as attended the Salisbury, the Chester, and the Warwick meetings, could not be looked for, and were not forthcoming. The late favourable change of the weather, which has enabled farmers to resume work at home, may also have had something to do with the comparatively small numbers of visitors who have attended the show-yard at Canterbury. Yet, with all these drawbacks, this year's show, taken as an index of agricultural enterprise, was by no means unsatisfactory. Notwithstanding the absence of the great firms of implement makers, there was no lack of implements or machines of the best kinds; and we cannot help thinking that whatever may be the grievances of the great firms (and we don't profess to know the rights of the matter), they have scarcely consulted their own interests in staying away from this great yearly agricultural fair and business-holiday. There were many foreigners looking keenly amongst the implements and the live stock for objects suited to the wants of their own countries; and in several instances which came under our observation, their researches appeared to be directed with much purpose and acumen. We met with two Spanish gentlemen, landed proprietors in Cuba, who had come over to this country with a view to obtain machinery and implements in aid of sugar cultivation and manufacture. They had substituted Coolie for Slave labour on their estates, and were anxious to obtain mechanical power to assist or displace mere manual labour. The possibility of applying the reaping machine, or something formed on the same principle, to cutting sugar canes, seemed to have engaged a good deal of their attention.

Our space will not permit us to enter into any details in reference to the machinery and implements, but there was one machine which, from its novelty and probable importance, deserves notice. This was "Ericsson's Caloric Engine," exhibited by the "Agricultural Engineers' Company," and designated a new motive power. It is a practical adaptation of the idea which the inventor endeavoured, though not successfully, to carry out in the well-known Ericsson caloric ship. It is stated to be extensively in use in the United States as a substitute for the steam engine, as compared with which the advantages claimed for the caloric engine are, a saving of two-thirds of the fuel; extraordinary simplicity, allowing it to be worked by a boy or unskilled labourer; immunity from explosion and the consequent hazards; and working wholly without water. These are, without doubt, most important advantages, and if the machine is found to be effective, must soon bring it into extensive use. It occupies, too, comparatively small space. To give the reader some notion of its operation, we extract the following description from the exhibitors' circular:—"The cylinder is open at one end, and has a furnace set into the other. Cold air is admitted through a valve in the piston, and, when expanded, forces the piston forward. This outward stroke not only furnishes the available power, but supplies in addition sufficient [power], acting through the balance wheel, to force the piston to its original place, expelling at the same time the expanded air which has done its work, and introducing a fresh supply of cold air for the succeeding stroke." The price of this engine varies according to the size of the cylinder; an 8-inch single cylinder being 55*l*, ranging to a 60-inch cylinder at the cost of 1,100*l*. Double cylinder engines of the like dimensions vary from 90*l* the lowest to 2,000*l* the highest.

Of the live stock, the Shorthorns formed without any doubt the great feature of the show. Less numerous than usual, they were remarkably good in all the classes. This was shown by the numbers of animals, over and above the prize-takers, which were "highly commended" and "commended." Indeed, there were very few Shorthorns in the yard which would not have looked respectable in any herd. Colonel Towneley's bull, "Royal Butterfly," which obtained the 30*l* prize in Class I.—*i. e.*, calved before 1st of July, 1858—was a magnificent animal, and confessedly the champion of the meeting, but several of the other awards gave less satisfaction to the breeders generally. We heard the decision as to the third prize [5*l*] of this class, Lord Faversham's roan bull,

four years and two months old, a good deal criticised; and certainly it is not the bull we should have placed third in that class. It is, however, a very well-bred bull and a good handler, though somewhat flat-sided. In this class, Mr J. T. Noakes, of Lewisham, in Kent, had a bull "commended." This gentleman exhibited in several of the classes, and fairly sustains the credit of the county in each of his animals.

Class II.—Bulls calved since 1st July, 1858, and Class V.—Heifers in calf or in milk, not exceeding three years old,—formed perhaps altogether the strongest classes. In the latter, of 15 animals there was one only which had not either a prize or a commendation. Class VI.—Yearling heifers—was also very well filled. The notice of the Shorthorns and their breeders would not be complete without mention of Lady Pigot, who took several prizes, and had several commendations in the cow and heifer classes. We observed her Ladyship taking an earnest and businesslike interest in her stock, and on more than one occasion saw her in deep conversation with her herdsman, as if she meditated some fresh purchases. We should also mention Captain Gunter's two yearling heifers—*i.e.*, not *two* years old—which obtained the first and second prizes of their class, as most meritorious and beautiful animals. They are twins of the famous "Duchess" strain. The third prize in this class, Mr Robinson's, of Clifton Pastures, Newport Pagnell, Bucks, scarcely 14 months old, is also a splendid heifer. As a proof of the value of good Shorthorns, a Scotch farmer and breeder, who had offered 100*l* for this heifer, admitted to us that he considered she was well worth the 200*l* her owner asked for her. Another Scotchman, about to emigrate to New Zealand, offered 149*l* for a yearling bull, not a prize winner, which was refused, and the owner obtained the 150*l* he asked from another person.

The Herefords were not numerous, but very good. The Devons were even less strong in numbers, but those shown were of great beauty. Mr Quartly and Mr Geo. Turner, well-known breeders of Devons, obtained nearly all the prizes. Amongst the other established breeds, the Sussex cattle shown should be mentioned, as indicating that this breed is undergoing that process of improvement, by careful selection, of which we have always deemed it capable. They are much larger than the Devons, and when brought to the state of perfection some of those shown at Canterbury have attained, are more likely to become permanent favourites beyond their own locality than the Devons. Several of the Norfolk polled cattle, and some of the little "Bretonne" cows, were also exhibited.

The South Down sheep and the Cotswolds seem to be more steadily making their way amongst sheep-breeders than any other kinds, and the specimens of each at Canterbury have seldom been exceeded. The Shropshire Downs were there also in considerable numbers, and they look like profitable farmers' sheep. The Kentish sheep exhibited contrasted unfavourably with every other breed. We heard more than one farmer remark that they would be improved by crossing them with Cotswolds. The fault, however, lies partly in the management and feeding, which are both of the most indifferent sort.

In the horse classes there was nothing worthy of remark. "Dagobert," the prize hunter sire, is a beautiful topped horse, but wanting substance in his fore legs. Several of the hunting brood mares were strong useful animals, but nothing more. Two or three had foals of large size, and likely, so far as can be judged at that age, to make hunters. With the exception of thoroughbreds or cart horses, there is far more uncertainty in breeding—less certainty in like producing like—than in any other kind of stock.

We noticed that the wheat crops along the line of railway, though backward, are not inferior to the ordinary crops of the district in average years, but the barley was wretched. Very little of it can ripen unless the summer be more than commonly lengthened. The beans, too, are generally stunted and bad. The grass crops of all sorts seem to be heavy.

Literature.

[The great pressure upon our space compels us to omit a large portion of our literary matter in type].

Fraser's Magazine. July, 1860. J. W. Parker.
The Cornhill Magazine. July, 1860. Smith and Elder.
Macmillan's Magazine. July, 1860. Macmillan.

Of the three principal Magazines for July, the oldest seems to us to maintain a very great superiority in general level over both its younger rivals. The new number of "Fraser" is one of the best we have ever read, and contains scarcely anything that is not well worth reading by the habitual readers of the different classes of articles contained,—some papers that deserve to be read by all readers. Of such is the beautiful poem "Saint Brandan," by Matthew Arnold, which is far superior to the confusing (if not confused) stanzas on "Men of Genius" which the same thoughtful poet has contributed to Mr Thackeray's Magazine. "Saint Brandan" is marked by the same delicate perception and clear cool images of natural beauty which marked the author of the "Sick King in Bokhara" as a genuine poet to the first readers of Mr Arnold's poems. The tale of "Gryll Grange," which is continued in this number of "Fraser," is one of Mr Peacock's best productions. The satirical style in which he always wrote has improved rather than deteriorated with age,—and the moral frugality which restrained him so long from deluging the world, as most successful authors do, with faint reflexes of their former efforts, is now receiving its recompense in the marked success which attends his latest production, though composed at an age when most men have laid down the pen for ever. The "Chronicle of Current History," which appears for the first time in "Fraser," is written with great elegance and discrimination. It will be a great additional attraction to the Magazine. A "Plea for Truth in Advertisements" is an amusing article on a subject of some importance in this age of puffs. "Wheat and Tares" is a tale of some ability.

The new number of the "Cornhill Magazine" has also some elements of considerable interest. Mr Thackeray is at last publishing his clever, though somewhat painful, lectures on the "Four Georges," in which he is wise. The new "Roundabout Paper" by him on the kind criticisms which have been passed on his Magazine is very lively and amusing. "Framley Parsonage," by Mr Trollope, is continued with great vigour, and more of depth and purpose than the earlier part promised. Mr Sowerby and Mr Crawley of Hogglestock are both really new and powerfully conceived characters, hitherto executed with unusual ability and care. Mr Thackeray's poem on "Vanitas Vanitatum" is not more remarkable than Mr Arnold's "Men of Genius;"—both, in fact, are poor. But Mrs Browning's, on "A Musical Instrument," addressed to the "Great god Pan," is marked by the genius as well as the arduous eccentricities of her unequal mind. It would be pleasanter without the very ugly illustration which accompanies it. No one can read the poem without a thrill at the unearthly music it describes so powerfully,—but the picture is simply ridiculous. "William Hogarth" is continued; but its author's contributions scarcely deserve admission into this Magazine.

"Macmillan" is usually more unequal than any of the Magazines. This number is more level—more uniformly good. Its principal attraction, "Tom Brown at Oxford," is full of vigour, purpose, and reality. And this Magazine, too, has one remarkable contribution in verse, a translation of Giuseppe Giusti's poem on "The Boot," in which the fate and fortunes of Italy are powerfully symbolised. The translation is remarkably spirited and forcible. Mr Ludlow's paper on "Swiss-French Literature—Madame de Gasparin," is marked not only by the great knowledge of its author, as well as his strong purpose, but is more properly literary than those which he usually selects. The intellectual influence of Swiss thought on French literature is a subject of some novelty as well as real interest. We extract the following:—

> Protestantism, therefore, may be said to have created French Switzerland; Protestantism is that which has made it entitled to stand out before Europe as the representative of all Switzerland. It is easy to see why. If there be one marked characteristic of the Swiss race, it is its individualism. Inhabiting for the most part a very thinly populated country,—always at war, so to speak, with nature, since even his sunniest valleys are swept by the wintry mountain blasts,—the Switzer is obliged to earn his own living, to fight his own way. He is essentially a worker and a fighter; shrewd, prudent, determined; endowed with more good sense than genius; his thrift shading easily into avarice; a trader even when he fights. Now the Calvinistic reformation is the most individualising of all the theological movements of the sixteenth century, and it was thus admirably adapted to the tendencies of the Swiss mind, whilst the position of Geneva, as a harbour for French Protestantism whenever expelled by fire and sword from its own country, and thereby in constant antagonism with Romanist France, tended to develop this character to the uttermost. Not, indeed, but what the Protestant cantons of German Switzerland have always held a respectable place in the intellectual annals of Europe. Haller, of Berne; J. von Müller, of Schaffhausen; and, above all the sons of Zurich, the "Athens of German Switzerland," the Gessners, Lavater, Tschudi, Zimmermann, with Zchokke in our own days, give to that district quite a fair average of literary and scientific merit. But already on the border-land between Gaul and German, at Bâle (which now every year becomes more French), the Bernouillis and Euler are French in language; and it is unquestionable that to French Switzerland belong those few really great Swiss names which stamp themselves upon their age, the Rousseaus, De Staels, Guizots. Romanism, moreover, continued to cling to the rock-summits of German Switzerland, harbouring with it ignorance and intellectual torpor, at the very heart of the old Teutonic nucleus of the land. And thus it came to pass, as I said, that wherever Swiss individualism had to speak out before Europe, it did so mainly in French.
>
> Conversely, again, we need not be surprised to find that if there be one character which distinguishes Swiss-French literature and science, it is precisely this individualism. Here we find ourselves dealing with men who think for themselves. Their very mediocrity becomes thus original by the force of circumstances. Was there ever a heavier writer, a more mediocre thinker than Necker? And yet that Genevese banker, standing in his plebeian respectability amid the brilliant French court, daring to declare, in an age of prodigality and insolvency, that economy is a public duty, that it is the business of kings to rule for the good of their subjects has an originality which it is impossible to mistake in contemporary pictures, and becomes thereby for a time the very idol of a nation. Dumont is not a man of very great genius; but he has the originality to discover Bentham, who for twenty years perhaps is scarcely known except in Dumont's paraphrases.

The paper of Alexander Smith, on the "Fair of Keady," is amusing. A paper on the "Social and Economical Influence of the New Gold" is poor. It cannot compare for a moment with the two recent remarkable papers in "Fraser" on the same question. Mr Maurice's paper on "Mrs Jameson" will be read with interest. But "Macmillan" has, as usual, one or two papers of something like pure trash,—which a periodical aided by men of so much ability ought not to accept.

THE DUBLIN UNIVERSITY MAGAZINE. No. 331. July. Hurst and Blackett.

THE "Dublin University Magazine" for this month is scarcely up to the usual mark, either in ability of writing or attraction of subject. It opens with a rather vague article on the "French Treaty of Commerce." The principal sources of the commercial wealth of France are passed in review, and their, on the whole, slow expansion is traced to the French law of succession as much as to the protective duties till recently so carefully maintained, and even now only partially removed. This part of the writer's theme is well done, and possesses an interest of its own; but when he comes to discuss the probable effects upon France and England of the late commercial treaty, he has nothing to say either new or weighty, but is fain to call in Time to solve the problem whether our Government has made in this treaty a gigantic mistake, or inaugurated "an era of unparalleled prosperity." "Palæontology" is a dry discussion of the succession and anatomical form of the creatures who used to "stately tread or lowly creep" over the antediluvial globe. The writer does not possess Professor Ansted's or Hugh Miller's pen to make the dry bones live again.

One of the best articles is on the "Working Day World of France," continued from former numbers. The writer speaks as one who has a personal knowledge of a class of whom we have little knowledge of our own; yet the opinions, hopes, and sympathies of the masses of French working men cannot be an object of indifference to us, their near neighbours. The writer also draws attention to one point in which the Paternal Government under which they live may be favourably contrasted with our own, viz., the laws by which it protects and educates the child, apprentice, or worker.

"Foreign and Domestic Politics" is a slight retrospect of past measures, whether actual or abortive. "The Marshals of Napoleon the Great" are concluded in this number. "Rienzi" follows the career of that extraordinary man to the close of his season of successful daring. It holds an equal balance between the novelist's enthusiastic praise and the historian's severity. "McCosh's Intuitions of the Mind" and "The History of Jurisprudence" are two solid, not to say heavy articles. On the whole, there is little that is really bad, and not much that is really good, in this number.

THE ENGLISH WOMAN'S JOURNAL.

THE chief article of the July number of the "English Woman's Journal" continues from a former number a careful survey of the French system of national education, from the University of Paris to the "primary" and rudimentary schools established in the villages and lesser towns. Amongst the others, we may notice some interesting letters from Australia, showing the beneficial effects of "Assisted Emigration," when the assistance is judiciously bestowed; the first part of a pleasantly-written memoir of Madame Swetchine, a Russian lady of rank and learning, whose biography is just now the fashion in Parisian literary circles; some sensible remarks on district and workhouse visiting; and a contribution from the pen of a physician, on the kind and degree of education that is necessary and suitable to enable women to act as doctors for women and children.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The Superior Council of Commerce is still continuing with due diligence its inquiries preparatory to fixing the duties on British goods to be imported under the treaty. It is now engaged with the manufactures of which flax, hemp, cotton, and wool form the staple. The evidence given before the Council is, as I have before told you, printed for the use of the members, but unfortunately it is not published for general information. Even for the members it is not printed with all the despatch which would, perhaps, be desirable;—the latest reports produced—and those only in proof sheets—being for example the sittings of the 4th, 8th, and 11th of last month. These reports refer to the trades which use metals, and they are exceedingly interesting. Among other facts which, in a hasty perusal of the documents, have attracted my attention, are these:—Germany imports considerably more needles from France than England, but those of England are of superior quality, and are infinitely more esteemed: French needle-makers calculate that, on the whole, England only makes needles some 10 per cent. cheaper than they do; and yet they modestly ask for protection equal to 22 per cent. At present, certain sorts of English needles pay high duties, though the like is not made in France at all. Numerous English workmen are employed in the needle trade in France, and are better paid than the French workmen. The same is the case in the steel pen trade; in it, three foremen out of every five are English. The demand for English steel pens is declining in France. For watch springs no protection whatever is needed if coal and steel can be obtained cheap:—this is admitted by some of the leading men in the trade. Saws, files, and tools generally, are represented not to be so good in France as in England, and rather large protection is demanded. For steel ornaments it is said that no protection whatever is necessary, large quantities of them being exported to England; still it is admitted that certain descriptions of such articles were made better and cheaper by the English. Works of art in bronze are declared to have no need whatever of protection, and the opinion is expressed that the treaty will largely increase the demand for them. From, however, the English way of lining, and style of furnishing houses, it is intimated that the demand for such articles in England will never equal that which prevails in the United States, Spain, and Germany. In connection with the bronze question, it is stated that articles of that material are not at all equal in quality to what they used to be in former years, though not inferior in an artistic point of view. The opinion is also expressed by a high authority that the English, in spite of the marked progress they have lately made in manufacturing art, will never be equal to the French in artistic design. On the subject of copper, certain founders make very extravagant demands for protection against the English. Button-makers, also, who use copper, ask for a protection equal to 15 per cent. *ad valorem* against English buttons, and yet they admit that they export largely to England. To compete with Germans they say they require protection of not less than 30 per cent. Finally, a lamp-maker declared that the English cannot make lamps at all approaching those of France, and that he himself does an extensive business in England; yet he has the modesty to ask for 30 per cent. protection "because it is put down in the treaty."

The Government Bill for abolishing the prohibition to export rags, and for allowing the export on payment of 12f the 100 kilogs (nearly 5*l* a ton), encounters, as was expected, very strong opposition from publishers, newspaper proprietors, and other large consumers of paper. A considerable portion of the paper-makers are also opposed to it, though, as their paper is to be admitted into England at a greatly reduced duty, they at all events have little to complain of. In the Legislative Body, likewise, the opposition to the Bill is very great. On the whole it is feared the Government will not be able to carry the measure through the Legislature, unless it consents to a very large increase of the export duty,—to 30f the 100 kilogs some people say! The duty fixed by the Government is unreasonably high already, and any large increase of it would deprive the Bill of all practical value.

The vexed question of the charge for admission to the Bourse is once again on the *tapis*. The charge keeps a vast number of people away from the Bourse who would otherwise go there, and, consequently, checks business; and the decline in business naturally produces an unfavourable effect on the *rente* and all other securities, and, through them, on commerce in general. Hence the admission fee has long been loudly and energetically complained of. The Government, having become convinced of the inconvenience it presents, has consented to its abolition; and the Municipal Council of Paris, in compliance with the wishes of the Government, has voted that it shall cease, provided that the revenue it produces to the City, and which is some 25,000*l* sterling, shall be made up in some other way. The stock-brokers, though considering themselves aggrieved by having such a charge imposed upon them, offered to raise by subscription among themselves 24,000*l* a year. But the Municipality is unwilling to accept that; and it wants to impose, instead of a subscription, a fixed duty of 5 per cent. on the gains of the brokers. To this, however, the latter vehemently object; first, because the charge would be onerous to themselves and the public; and, next, because the levy of it would necessitate the production of their account books to the officers of the Municipality,—a thing to which they say they cannot consent, inasmuch as they are bound by law to maintain "inviolable secrecy" on the operations they effect for clients. In this position the matter at present stands.

A Bill for allowing 40,000,000f to be lent to manufacturers to improve their machinery has passed the Legislative Body. That Body is now occupied in the discussion of the Budget of 1861, the amount of which is fixed at 1,840,121,858f.

The subscription for railway bonds opened by the Bank of France has, as had been expected, perfectly succeeded. Accord-

ing to a notification published by the Bank, 38,600 persons subscribed, and the result is as follows:—

	No. of Bonds to be issued.	No. of Bonds subscribed.	Award (about) Per cent.
Ardennes	100,000	115,995	86
Dauphine	24,000	42,768	56
Eastern	154,000	186,831	82
Paris and Mediterranean	275,000	492,250	55
Southern	100,000	120,395	83
Orleans	200,000	494,593	40
Western	170,000	172,323	98
Total	1,023,000	1,625,155	

Business on the Bourse continues to be very inactive. The following are the quotations:—

The following is an account of the markets:—

Flour, at *Paris*, has undergone a further decline: yesterday, the quotation was 62f to 66f the sack of 159 kilogs, and for the four marks, 61f for the current month, 62f for August, 63f for September, and 65f for October.

Wheat, at *Paris*, was likewise declined: yesterday, ordinary qualities were 35f to 35f 50c the sack of 120 kilogs; good, 36f to 37f; choice, 37f 50c to 38f. At *Marseilles*, and almost everywhere all over France, there has been a fall; in fact, out of 135 markets from which reports have been received, 124 present a fall of from 20c to 2f the hectolitre; only 7 a rise of 9c to 1f; and 4 have undergone no change.

Cotton.—At *Havre*, in the week ending Friday, the sales were 7,329 bales, and the importations 3,091. Prices remained unchanged: low New Orleans, 86f the 50 kilogs, and very ordinary ditto, 95f. The stock on the 1st of the present month was 254,200 bales. The market has not been animated this week, and yesterday low New Orleans was still quoted at 86f.

Sugar.—At *Havre*, in the week ending Friday, business was rather important: 3,450 hogsheads French West India were sold at 47f 50c to 48f 50c the 50 kilogs duty paid; upwards of 100 ditto "usine," part at 48f 50c, and part at 51f and 56f; 8,000 bales Reunion, 52f; and 3,250 sacks Mauritius, 56f 50c. The arrivals were 248 hogsheads and 374 sacks. The stock on the 1st of this month was 13,000 hogsheads French West India, 10,500 bales Reunion, 36,500 cases Havana, 15,000 sacks Brazil, 14,720 sacks Manilla, and some small quantities of other sorts. This week, sales have not been very large: French West India, 48f 75c to 49f 25c; ditto "usine," 56f 50c. At *Bordeaux*, last week, various lots of French West India went at 46f 50c to 48f; 3,000 bales Reunion at 53f 50c; 800 at 52f; 2,806 at prices kept secret. This week, little has been done: French West India, 48f; Reunion, preceding quotations. At *Nantes*, last week, upwards of 6,000 sacks Reunion and disposable went at 51f to 54f 50c; 1,863 Nossi Bey, 47f 50c; a small lot French West India at 48f 50c; and one of "usine" ditto, 55f to 58f 50c. This week, two lots of Reunion gros grain have been sold at 55f to 56f 50c.

Coffee.—At *Havre*, in the week ending Friday, the market was calm. 100 sacks Hayti, disposable, went at 80f the 50 kilogs in bond; 500 Hayti Jacmel, at 77f 50c; 1,670 Rio, not washed, 74f to 75f 50c; and a small lot of French West India, at 130f to 135f duty paid. In addition there were some sales of damaged. The arrivals were unimportant. The stock on the 1st of the month, including the quantities in bond, was 4,518 tons. This week, sales have been rather numerous: Rio, 75f to 78f in bond; Port-au-Prince, 78f; Gonaives, 81f and 82f. At *Bordeaux*, last week, 500 sacks Mysore and 585 Malabar went at prices kept secret; 157 Costa Rica, for delivery, at 116f 50c. Nothing important has been done this week. At *Nantes*, last week, the sole transaction was the sale of some lots of damaged; and this week there have been no sales. At *Marseilles*, last week, 2,600 sacks Rio went at 72f in bond; a lot of Mocha, at 105f to 112f 50c in bond; 2,000 sacks Hayti, 75f 50c to 76f 25c.

Indigo.—At *Havre*, in the week ending Friday, 32 cases Bengal were sold, part at 11f 60c the ½-kilog duty paid, part [at prices kept secret. There were no arrivals. The stock on the 1st of the present month was 1,240 cases Bengal, 88 Java, 39 Madras and Kurpah. There have been no sales this week. At *Bordeaux*, last week, sales were insignificant, and prices underwent no change. Some petty sales have been made this week, but prices are not given.

Hides.—In the week ending Friday, at *Havre*, business was animated. 247 La Plata dry went at 152f 50c the 50 kilogs duty paid; a lot of ditto salted matadero at prices kept secret; 126 Buenos Ayres salted saladero (cow), 80f; 1,900 ditto for delivery, 81f 50c; 431 Rio Janeiro salted, 66f; 3,200 Pernambuco salted, 67f to 67f 50c; 2,503 Minas dry, 124f; 400 Lima drysalted, 86f; 3,226 Central America dry, to be delivered at London, 117f 50c; 1,511 New York salted, 52f 50c; 2,327 New Orleans ditto, 50f to 52f 50c; 1,011 Ireland, 50f; 1,900 horse La Plata salted, at prices kept secret. Several lots of damaged were also sold. The arrivals exceeded 8,000. The stock on the 1st of the present month, excluding horse hides, was 216,000. This week the sole sales have been a lot of New Orleans salted, 50f 75c; and a lot of horse Buenos Ayres salted, 100f the 100 kilogs.

Wool.—At *Havre*, in the week ending Friday, business was rather animated: 550 bales La Plata unwashed went at 1f 10c to 3f 25c the kilog; 22 Entre Rios washed, 4f 10c; 52 Monte Video washed, 3f 75c to 4f 17½c; 74 Alpaga, 5f 25c; 60 bales sheepskins, La Plata unwashed, 75c to 1f 40c. The stock on the 1st of the present month exceeded 4,500 bales. This week, there have been some sales of Buenos Ayres and Chil.

Tallow.—At *Havre*, last week, nothing was done, and there were no arrivals, and the same has been the case this week. At *Paris*, yesterday, the 100 kilogs were 142f 50c—a not unimportant decline on last week's quotations.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg., first quality, was 96f the hectolitre; Montpellier of 86 deg., 130f. At *Bordeaux*, on Monday, 3-6 Languedoc was 130f; and beetroot, first quality, 100f.

Rotterdam, July 10.

An official return shows that the quantity of cotton imported here in the six months ending the 30th ult. was 50,639 bales, and that the stock remaining on that day was 13,301 bales. Last year the imports for the same period were 32,872 bales, and the stock at the same date 13,322 bales.

Antwerp, July 10.

The quantity of coffee imported at this place in the course of the first six months of the year was 134,549 bales. This was more than the imports of the corresponding periods of the two preceding years, but considerably less than those of the years 1857, 1856, and 1855. The stock on the 1st July was 30,000 bales. The importation of hides in the first six months of the year was 482,145, and in the same period of last year it was only 234,177. The stock on the 1st of the present month was 185,324.

Berlin, July 10.

Some time ago it was stated that the French Government had made overtures to the Prussian Cabinet for the conclusion of a treaty of commerce, but that they were for some reason not favourably received. France has since, it appears, renewed the offer, and, in consequence, Prussia has deemed right to confer with her confederates in the Zollverein on the matter.

St Petersburg, July 3.

The Government it is reported has made some not unimportant concessions to the Great Russian Railway Company. It is said to have decided, for example, that it will not share in the profits of the Warsaw line until they shall amount to 8 per cent., instead of 5 per cent. as at first stipulated, and that it will increase its guarantee from 62,500 to 80,000 roubles for the Moscow to Theodosia line. The Company moreover, it is said, is to be allowed to issue, when it pleases, bonds or shares to the amount of one-half of its realised capital, and even to increase the capital. Finally, it is stated the Government agrees to sell to the Company the railway from St Petersburg to Moscow, and to give it a guarantee for each particular line, instead of for the whole network as originally stipulated. The projected site of the Moscow line encounters some opposition,

COMMERCIAL AND MISCELLANEOUS NEWS.

A commercial report from Bombay, dated the 6th ult., says:—Business languishes, and great stagnation pervades nearly all markets. The most noticeable fact is the continued extreme abundance of money, which finds no profitable outlet, and the further relaxation of the Bank of Bombay's rates on the 31st ult. by 2 per cent., leaving discounts at the almost unprecedented figures of 3 per cent. for Government and 5 per cent. for short private bills. Even this had little effect in causing applications for accommodation, the joint stock banks lending at still lower rates. Government paper has slightly declined in value. The tenders of the holders of Treasury bills for conversion of the same into Government stock were opened at the Bank on the 2nd inst., when the rates which Government were prepared to accept were announced to be 83 per cent. for Four, 97 for Five, and 103 for Five-and-a-Half per Cent. paper. At these, or slightly higher rates, about 60 lacks of rupees were taken up, being nearly the whole amount of bills granted in this Presidency. This addition to the loans as yet produces no effect upon the stock market, the notes being issuable only about two months hence. The demand for cotton piece goods has been very small. Cotton continued with little change until yesterday, when a telegram from Galle, with news to the 10th ult. from England, reporting American a little firmer, and a sudden fall in freights, caused by numerous arrivals, led the dealers to raise their prices, and a few bargains have been made, chiefly among themselves, at an advance. They now quote 128r to 130r for Broach, and 120r to 124r for Dhollera and Bhownuggur per candy, but these rates have not been paid, while the remainder of our quotations, though raised, are also nearly nominal. Very few English houses have been in the market, and the price is chiefly kept up by native purchases, most of which go forward to the China market. It is difficult to estimate the stock now in the godowns, and with which we shall commence the monsoon,

but it is not believed to be as large as that of last year, which, judging from the exports during the rains, could not have been less than 250,000 bales. The sailings during May were 91,143½ bales to Great Britain, and 93,844½ bales to all quarters.

An official statement of the trade of Scinde in each of the past eleven years, shows that the introduction of the railway system in that province has tended considerably to increase its commercial importance:—

Year.	Imports. £	Exports. £	Total. £
1848-49	344,715	107,136	451,849
1849-50	419,352	114,378	533,731
1850-51	425,831	196,461	622,293
1851-52	489,220	244,122	733,343
1852-53	535,690	376,337	600,000
1853-54	508,793	376,310	885,103
1854-55	575,198	346,893	922,089
1855-56	629,813	604,440	1,234,253
1856-57	685,665	734,522	1,420,187
1857-58	1,081,100	1,078,100	2,159,200
1858-59	1,540,600	1,044,200	2,584,800

The commercial advices from the Australian colonies report one or two more failures at both Sydney and Melbourne, but the crisis was over. Trade remained in a stagnant state, but money was more plentiful and confidence was returning. In all speculative operations, however, cash was invariably demanded. Messrs Kerchner and Co., of Sydney, New South Wales, had failed, with liabilities of 60,000*l*, and assets 24,000*l*. Trade generally was very dull, with some want of confidence apparent. The shipments from Europe had shown some decrease, but the diminution was not sufficient. About 3,000 bales more of wool of the season was expected to be shipped. At Melbourne there was some change for the better in all the markets. The only suspension of any consequence was that of Messrs E. Bradley, oil and general merchants, whose liabilities are said to be very large and assets very small. A composition of 2s in the pound had been offered. From Adelaide, South Australia, we have the important news that the propositions of the late Government had been carried through both Houses for the abolition of the *ad valorem* duties upon imports, and the harbour and light dues. Trade was depressed in consequence of the rush to the Snowy River diggings.

Annexed is a comparative table showing the returns of trade for Australia for the years ending April, 1859-60, inclusive:—

Imports. 1858-9 £	Imports. 1859-60 £	Exports. 1858-9 £	Exports. 1859-60 £
14,079,758	13,703,283	12,849,314	12,897,819

In the first period the account stood thus:—

	£
Imports	14,079,758
Exports	12,849,314
Balance for the colony	1,230,444

In the second period:—

	£
Imports	13,703,283
Exports	12,897,819
Balance for the colony	905,464

The National Bank of Australasia, says a report from Melbourne to the 17th May, has again been the scene of dissension and difference between the directors and its *employes*, exhibiting a most unfortunate want of system and management in its operations. The manager, accountant, and several of the heads of departments, have resigned, and the bank, which was gradually assuming a most promising appearance, has attracted an unpleasant attention from the whole colony.

The latest advices from Trinidad state that the sugar and cocoa crops were completed with satisfactory results. At Barbadoes the crops were nearly finished. The sugar crop was considered an average one. Exchange, 30 days, 490 dols. At Demerara there was every prospect of a good crop. Sugar was scarce. Freights had risen. Trade was dull. Two vessels had arrived with emigrants from Calcutta and China. Business at Jamaica was quiet. The coming crop of pimento was freely offered at 2½d. Coffee, 44s to 45s per 100 lbs; sugar, 16s to 20s. Freights were quiet. Exchange on London, 30 days, 1 per cent. premium; 60 days, ½ per cent. premium; 90 days, par.

The average note circulation of the Bank of England, country banks in England and Wales, chartered, private, and joint stock banks in Scotland, the Bank of Ireland, and Irish private and joint stock banks, has been as follows during the last 15 years:—

	£		£		£
1845	29,490,206	1850	34,108,003	1855	37,567,174
1846	29,138,297	1851	33,947,062	1856	37,663,504
1847	25,921,758	1852	37,594,611	1857	37,568,955
1848	32,982,724	1853	30,688,364	1858	37,130,159
1849	32,822,526	1854	38,445,766	1859	39,400,101

The circulation, it will be observed, has been curtailed materially in troubled years.

An account, pursuant to the Act 8 and 9 Vict., cap. 38, of the amount of bank notes authorised by law to be issued by the several banks of issue in Scotland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 30th day of June, 1860:—

Name and Title.	Authorised Circulation £	Average Circulation. £	Average Amount of Coin held. £
Bank of Scotland	300485	466109	259481
Royal Bank of Scotland	183000	472488	324060

COTTON.

NEW YORK, June 26, 1860.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with the closing prices, f.o.b., with freight in sterling at current exchange:—

	Sales.	Closing.	Middling.	Freights.	f.o.b.
New Orleans...June 23	11000	¼c lower	11⅛c	13-32d equal to	6.12d
Mobile 23	2000	unchanged	10⅝c	¼d —	5.85d
Charleston 22	700	nominal	10⅝c	¼d —	5.66d
Savannah 22	400	—	10⅝c	5-16d —	5.80d
New York 26	5000	⅛c lower	Upl. 10⅝c	¼d —	5.60d
Total	19100 bales			Average	5.81d

There is now an excess in receipts of 794,000 bales over last year, when the crop reached 3,851,000, and of 1,437,000 over 1857-8 (crop 3,114,000).

New York Market—This market during the past week has, like the preceding, been very dull, and the lower grades are nominal, while the better are held with more firmness. The week's sales amount to about 5,000 bales. We quote middling Uplands nominally 10¾c.

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years:—

	Receipts. Week's Receipts. bales	Receipts. Since 1st Sept. bales	Exports for the Week. To Great Britain. bales	To France. bales	To other For. Pts bales
1859-60	13000	4419000	22000	...	3000
1858-59	8000	3625000	42000	2000	1000
1857-58	14000	2982000	64000	10000	9000
1856-57	6000	2873000	38000	9000	11000
1855-56	13000	3427000	45000	...	5000
1854-55	31000	2620000	17000	1000	5000

	Exports Since First September. To Great Britain. bales	To France. bales	To other For. Pts. bales	Total. bales	Stock. bales
1859-60	2619000	567000	467000	3653000	246000
1858-59	1877000	400000	524000	2801000	250000
1857-58	1626000	369000	344000	2339000	287000
1856-57	1356000	380000	389000	2125000	182000
1855-56	1832000	472000	487000	2791000	177000
1854-55	1379000	403000	250000	2032000	175000

Thus the receipts show an increase of 794,000 bales over those

of last year, and an increase of 1,437,000 over 1857-8, and the exports exhibit the following results:—

	To G. Britain.	To France.	To other F.P.	Total.	Stock.
Compared with last year.....	Inc.742000	...Inc.167000	...Dec. 57000	...Inc. 882000	...Dec. 4000
Compared with 1857-8.....	Inc.993000	...Inc.198000	...Inc.123000	...Inc.1314000	...Dec. 41000

Southern Markets by Telegraph—The continued dull news from Liverpool has prevented the few buyers still at the South from operating, so that the business at most ports has been very small. At New Orleans, however, a moderate business has been done—11,000 bales being sold at ¼c decline; middling being quoted 11¼c. At Mobile, prices are unchanged at 10¾c for middling. Sales only 2,000 bales. The Atlantic markets have been very quiet, and prices are nominal. Freights are rather lower at New Orleans and Charleston, but unchanged at other ports. Sterling exchange has advanced slightly at Mobile.

The reports of the growing crop from most sections continue very favourable, although from some localities we still have complaints of drought, which speak of the damage the plant must sustain unless soon visited with rain. From other localities, however, we hear of there having been showers, and the crop is spoken of as being in a most prosperous condition.—*From Messrs Neill Bros. and Co.'s Circular.*

There has been a good demand for cotton throughout the week. The trade have somewhat increased their stocks, and exporters and speculators have done a large business. There is still an abundant supply, but with the increase of demand, prices of American have become much more regular, and in most cases during the last two days a slight advance even has been obtained in some special qualities. Egyptian are without change, but are not readily saleable. Brazil maintain last week's prices. East India have improved in conjunction with American. The sales to-day are estimated at 10,000 bales. There is barely so active a market. The reported export amounts to 17,140 bales, consisting of 10,300 American, 800 Brazil, and 6,040 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The advices at hand from the manufacturing districts, this week are, on the whole, favourable. For most kinds of goods—the stocks of which continue low, even for the time of year—there has been a healthy demand, and, with some few exceptions, prices have ruled steady. The value of wool is still very high, and many of the manufacturers complain that they are working at unremunerative quotations. The iron trade is firm at full prices; but there has been less doing in coals.

Manchester, Thursday Evening.—The letters received on Tuesday from Calcutta and Bombay, reporting an unusual paucity of business, even for the quiet period of the season, and the drooping tendency of prices, has afforded no relief to shippers; and buyers are acting with extreme caution. To-day, telegrams are received from Shanghai to the 17th of May, reporting a large speculative demand for shirtings at improved rates; and we have also rumours of a telegram from Calcutta, bringing dates down to the 11th of June, which speaks more favourably of the prospects in that market, but little impression has been made by these accounts upon the evident dulness creeping upon us, and we close the week spiritless. The announcement, on Wednesday, of the suspension of Messrs R. Freeland and Brothers, with liabilities amounting to 70,000*l*, all of which will fall upon our manufacturers and agents, has tended to increase our depression.

Bradford.—The wool trade just now is an exceptional state. The prices current are so much above the usual rates that buyers are necessarily cautious and backward in their operations. The export demand for yarn is moderate, but the limits put upon the agents here by their correspondents abroad prevent any extensive orders being placed. Prices are alike unsatisfactory to buyer and seller, leaving no margin for profit. The accounts given of the piece market are most conflicting: the merchants describe it as decidedly flat, and as a proof state that orders are being delivered before they are due, and that looms are standing idle to a considerable extent, On the other hand, we learn that there is a more lively demand for goods, and that prices are the only barrier to a fair business.

Huddersfield.—Orders for first-rate fancy trouserings in winter styles have been freely given to manufacturers, and goods of this description brought into the market have hitherto met with prompt sale. Crapes and other regular makes at and about 4s per yard are selling steadily, and makers keep well employed. Shipping houses are ordering very sparingly just now, and stocks of low-priced unions large. We have no change to report in the local wool trade.

Leeds.—The flax and linen yarn trader are still busy. At the same time spinners are complaining of the speculation in flax, which is evidently at work in Russia, and which, according to recent telegrams received here, has again sent up the raw material some 4*l* or 5*l* per ton.

Rochdale.—The change to summer weather is followed by still more activity in the demand for fine flannels, and so many pressing inquiries are made by post that many manufacturers absent themselves from the regular market. Shipping houses are now on the look-out for goods to export, but are deterred by the extreme rates asked. Yorkshire goods also move steadily off, and prices are unaltered.

Bradford.—The business doing continues on a comparatively limited scale. Wool remains very steady, and just a fair amount of transactions is taking place. In worsted yarns we have no alteration to report.

Glasgow.—Business continues remarkably steady in the wool trade. The demand for all classes of Scotch wools is very brisk, and any lots of the new clip are disposed of as soon as they come to hand. Prices are very firm, with a tendency in favour of the seller. Laid washed Cheviots of first quality are wanted. Crosses are in considerable request, especially combing lots, which fetch large prices. Laid and white Highland are easily saleable at full rates. The Irish markets have been characterised by great buoyancy, and prices have been going very high. The wool is nearly all brought up in the country districts.

Leicester.—There is a fair demand for some descriptions of hosiery, but business generally remains quiet; still, for the time of the year, there is nearly an average amount of business doing, and most good workmen meet with employment. In the country districts the hosiery trade is for the most part quiet. Yarns are high in price, and rates will doubtless keep up, as all descriptions of work command extreme prices.

Nottingham.—The continuance of seasonable weather favours the home demand, and, although the improvement is slight, yet more will be done in goods suitable for the summer if the fine weather continues. There is a fair business doing in plain goods (foundation nets), and some fair orders are in course of completion in Mechlin quiltings. The cotton fancy trade has improved, and orders are being received for this class of goods. There is a slight demand for certain descriptions of silk goods. Manufacturers are keeping down stocks as much as practicable; a good deal of machinery is still standing, and many lacemakers are out of employ. The hosiery trade is quiet, and the flatness which has characterised the trade for several weeks past continues, consequently employment in many branches is scarce.

Wolverhampton.—The first of the series of meetings of the ironmasters of this district for the current quarter was held in this town on Wednesday. The attendance of the trade was smaller than it generally is. The business transacted was almost nominal, but against this must be set the reports of the leading ironmasters that they are moderately well off for orders, and there is this further favourable feature for the trade, that consumers' stocks are low. The price which mine pig iron realised was about half-a-crown per ton below the price of last quarter-day. The second meeting was held at Birmingham on Thursday, when a moderate business was done in iron at the reduction above noticed.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, June 28.—Flour—State and Western steady, with a moderate business doing, closing quiet: superfine State, 5 dols 35c to 5 dols 45c; extra State, 5 dols 60c to 5 dols 65c; round hoop Ohio, 5 dols 80c to 5 dols 90c; super Western, 5 dols 35c to 5 dols 45c; common to good extra Western, 5 dols 55c to 5 dols 75c; Southern scarcely so firm; mixed to good, 5 dols 75c to 6 dols; fancy and extra, 6 dols to 7 dols 75c; Canada quiet. dol 31c; white Ky., 1 dol 55c to 1 dol 50c; white Canada, 1 dol 50c; Western, 1 dol 40c; amber ditto, 1 dol 45c. Corn firm: mixed Western, 68c; for sound shipping round yellow, 70c; small parcels white Northern, 65c. Oats quiet.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Most of the leading provincial markets held this week have been very scantily supplied with wheat. All kinds, however, have moved off slowly, but without much change in value. At the outports, foreign wheats have met a dull inquiry; nevertheless, importers have refused to accept lower rates. There has been a moderate inquiry for barley, on former terms; but malt has commanded very little attention. Oats have ruled a shade lower, and the value of beans, peas, and flour has had a drooping tendency.

The annexed return shows the ARRIVALS of GRAIN, &c., into the PORT of LONDON during the 2nd QUARTER of the YEARS 1858, 1859, and 1860.

The accounts at hand from most of our leading grain districts state that the wheats have rapidly improved in appearance during the last ten days. They are now mostly in blossom; but the general impression is that the harvest work will be nearly, or quite, a month later than in 1859. Barleys are looking thin upon the ground; but other spring crops are somewhat promising. The stocks of wheat in the hands of the farmers are now considerably reduced.

Throughout the Continent the wheat trade has become more quiet. In prices, however, very little change has taken place. The markets in the United States continue to be well supplied with produce, and shipments to England have rather increased.

In Scotland, wheat has met a slow inquiry, at barely stationary prices. Barley and other articles have ruled inactive, but not materially lower.

The Irish markets, almost generally, have continued dull. Prices have had a drooping tendency, but without much anxiety on the part of holders to realise.

A very limited supply of English wheat was on offer to-day, yet sales progressed slowly on former terms. In foreign wheat very little was passing; nevertheless, importers were firm in their demand. Oats were 1s per qr dearer than on Monday. In all other produce, very little business was passing at late rates.

Mr Ed. Rainford thus refers to the floating trade:—Floating Cargoes.—The only arrivals off coast since this day week are 5 cargoes, telegraphed this morning, viz., 1 of maize from Ibraila, 2 Sulina, 1 from Odessa, and 1 of Odessa Ghirka wheat from Odessa. The only transactions reported up to the close of the market since this day week are a cargo of Egyptian barley, on passage, at 25s 6d per 400 lbs, direct to London, and 5,000 quarters Danubian, at 25s per 400 lbs, to be shipped in October or November. For the arrived Ibraila maize 32s per 480 lbs is asked, and 30s is said to have been refused.

The London averages announced this day were:—

COLONIAL AND FOREIGN PRODUCE MARKETS

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The market continues firm, but is not quite so active as quoted last week. Strong refining qualities and West India have found the most ready buyers. The grocers take off the better descriptions freely at fully previous quotations, and inquiries still prevail for low sugars by the exporters. Of 472 casks Barbadoes by auction, a fair proportion sold as follows: yellow, 39s to 43s; brown, 35s 6d to 37s 6d. A parcel of grainy Demerara went at 42s to 43s 6d. The deliveries last week were very large, being 6,200 tons against 5,020 tons in 1859. Owing to the continued heavy landings, the stock at this port has been augmented to 72,000 tons, against 56,000 tons in the previous year. The stock in Great Britain on the 1st instant amounted to 120,000 tons.

Mauritius.—10,059 bags by auction chiefly sold: grey and yellow, 38s 6d to 41s 6d; low to good brown, 34s to 37s 6d; grainy sorts, 39s to 45s 6d. A good deal of business has been done in the lower qualities by private contract.

Bengal.—A considerable quantity of low brown date Bengal has changed hands privately at 30s per cwt.

Penang.—7,074 bags offered on Tuesday found buyers at the previous valuations: brown, 34s 6d to 37s 6d; low to good yellow, 38s to 42s; fine yellow to white, 42s 6d to 44s 6d per cwt.

Foreign.—By private contract, 8,500 bags clayed Manilla have sold at 36s 3d to 37s 6d. Two floating cargoes of Havana, No. 10½ to 11½, are reported at 26s 9d to 27s 6d. Of 1,725 casks Porto Rico in public sale, a fair proportion sold: grocery, 41s 6d to 48s; brown to middling grey, 37s to 42s. 379 casks Cuba were chiefly bought in for the sound portion: soft brown and grey, 38s to 41s 6d. 2,550 boxes Havana partly sold at extreme prices: brown, 37s to 41s; low yellow to good strong grey, 41s 6d to 45s 6d. 1,525 bags Siam sold readily at 41s 6d to 46s for yellow and white.

Refined.—The market has been steady, but not at all active. Common goods are still quoted 51s 9d to 52s per cwt. Crushed and pieces remain the same as before. Dutch crushed has been firm at the recent slight improvement in prices.

MOLASSES.—250 puns West India have been sold. Trinidad and St Lucia, 15s 6d to 16s; St Kitts, 15s 6d to 17s per cwt.

RUM.—Sales have been made in West India, chiefly Leewards, at 1s 6d to 1s 7d per proof gallon, which is rather lower.

COCOA.—No public sales were held to yesterday, and the market is quiet.

COFFEE.—The public sales of plantation Ceylon have been rather large this week, but the bulk of the supplies brought forward met with buyers and at steady prices. 1,069 casks 540 barrels and bags went as follows: low middling to good, 68s 6d to 77s 6d; small berry and pale, 65s 6d to 68s. 25 brls 2,300 bags native: good ordinary to good, 61s 6d to 63s. 131 packages Mocha went chiefly at 111s to 115s per cwt for small berry. A few lots Jamaica at previous rates.

TEA.—The public sales held this week have gone off at lower prices. 17,000 packages passed on Tuesday and Wednesday, including a large proportion printed "without reserve." About 10,200 packages sold. Flowery pekoe went 1d to 2d cheaper, and common scented caper at a decline on previous rates. Low to middling blackish leaf congous showed 1d reduction in some instances. A parcel very common, of old import, sold for cash at 1s 3½d to 1s 4d per lb.

RICE.—This article is still inactive. Privately, the few orders executed do not establish any material change in prices. Java has sold at 13s; Moulmein, 9s 10½d; white Bengal, 10s 3d to 13s 6d. At auction, 4,500 bags Bengal were only partially disposed of: good new white, 13s 6d to

14s; fine bought in above the value, and broken at 10s 6d. 1,723 bags pinky Madras, of old import, were taken in at 10s 6d to 11s per cwt.

IMPORTS and DELIVERIES of RICE to July 7, with STOCK on hand

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	15250	10450	59600	33200
Deliveries for home use	33400	13900	17550	15130
Exported	8220	12320	9650	30000
Stock	46540	70330	95600	40360

SPICES.—The market shows little alteration to notice. Black pepper is steady, a few orders being executed in Singapore at previous rates. 716 bags Penang partly sold at 3⅞d to 4d for fair quality; the remainder bought in: good, 4¼d to 4½d; common dusty, 3⅝d to 3⅞d. 121 cases Tellicherry white: good to very fine sold at 1s 0¼d to 1s 5d; coriander kind, 9¾d to 10d. 207 bags Penang sold at 6d. 18 cases mace: middling to fair, 1s 2d to 1s 4d. 10 casks Amboyna cloves were bought in at 5d. 17 cases Penang sold at 1s 4d. 337 bags pimento partly found buyers at 3⅜d to 3½d per lb. 150 barrels Jamaica ginger sold at 4*l* 8s to 5*l* 17s for ordinary to middling.

SALTPETRE.—A limited inquiry prevails, but holders have obtained full prices for the few parcels of Bengal sold by private contract. Yesterday, 537 bags, at public sale, were bought in: refraction 9 to 9¼, 41s to 41 6d per cwt.

IMPORTS and DELIVERIES of SALTPETRE to July 7, with STOCK on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	7800	10550	6120	9110
Delivered	6600	9700	7840	5950
Stock	5100	3800	4950	5200

Deliveries last week 360 tons.

NITRATE OF SODA.—The market is exceedingly dull, owing to the large stock here and at Liverpool. 50 tons have sold at about 13s 6d per cwt, being under the late nominal price.

COCHINEAL.—152 bags went at steady prices, and a fair proportion of the Honduras submitted found purchasers: small to fine bold silvers, 3s 1d to 3s 9d; blacks, 4s to 4s 10d; low, 3s 4d to 3s 8d. Mexican silvers, 3s 1d to 3s 2d; blacks, 3s 4d to 3s 9d; Teneriffe, 3s 3d to 3s 4d per lb.

OTHER DYESTUFFS.—Cutch has met with more inquiry at 26s to 26s 6d. Gambier is quiet. No change in safflower. Red Sanders wood sells at 5*l* 5s to 5*l* 10s per ton.

STICKLAC.—100 cases, of indirect import, went at 80s per cwt.

METALS.—The most important feature in the market this week has been the rise upon Scotch pig iron, which, at one period, touched 54s for mixed Nos. A reaction since occurred, and the price receded to 52s 3d. Rails and some other kinds of manufactured iron continue steady. A few sales have been made in spelter at 19*l* 15s to 20*l*, to arrive and on the spot. The market is quiet. No change has occurred in foreign tin: Straits, 131s 6d to 132s. There is now less inquiry. British has been steady.

HEMP.—The transactions are of very moderate extent, both in Russian and Manilla.

JUTE.—On Wednesday, 2,650 bales were about half sold, and at rather lower rates for some marks, ranging from 14*l* to 18*l* 10s; fine up to 22*l* 10s per ton, nearly supported the previous value.

TALLOW.—The market has been quiet, and prices of foreign have receded 3d to 6d. Yesterday there was rather more inquiry. First sort Petersburg Y. C., 52s 9d; for arrival in the last three months, 52s 6d per cwt. Imports have been rather large.

HIDES.—The sales of East India, yesterday, attracted much attention, and went off better than had been anticipated. Qualities suitable for the home trade were ¼d to ½d per lb lower, but the shippers paid full prices for other sorts.

TURPENTINE.—2,700 barrels rough sold during the week at 8s 9d. Spirits have been dull: American drawn, 33s 6d per cwt.

LINSEED.—Some further business has been done for the United States. Calcutta quoted 49s to 49s 6d; Bombay, 51s 6d to 52s; Black Sea and Azoff, 49s 6d to 50s per quarter.

OIL.—Quotations of olive are nominal, and the heavy export duty of 7*l* per ton to be remitted at Naples has increased the depression in the market. Cocoa-nut is firm: Cochin, 47s; Ceylon, 46s. Palm steady at 45s to 45s 6d. Sperm can be obtained on easier terms, viz. 93*l*. Pale seal, 35*l* per ton. Other fish oils are quiet. Linseed oil is in better supply at 28*l* 10s to 28*l* 12s 6d, and 29*l* 5s to 29*l* 10s per ton for future delivery. Sales in rape have been limited at last week's quotations.

PARTICULARS OF TALLOW.—Monday, July 9.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market was steady to-day, and the numerous parcels West India offered by auction found buyers. The total quantity of that description sold for the week amounts to 4,400 casks. 2,002 bags Mauritius and 4,340 bags Penang realised full prices. 2,700 bags native Madras, brown and yellow, 31s 6d to 34s 6d. 1,895 bags Port Natal, 37s to 44s. Two cargoes of Havana sold: one No. 14, at 45s 3d duty paid; one No. 6, at 26s in bond, for the United Kingdom.

COFFEE.—422 casks 159 barrels and bags plantation Ceylon realised full prices. 39 casks 500 bags native, 60s 6d to 63s 6d per cwt. 60 casks 153 barrels and bags Jamaica, 60s to 68s 6d per cwt.

COCOA.—137 bags Granada partly sold at 64s 6d to 68s 6d. 177 bags Trinidad were bought in at 70s to 75s per cwt.

SPICES.—Low nutmegs went cheaper; other kinds without change. 78 cases sold: small brown, 1s 4d to 1s 6d; fair to good, 2s to 2s 3d. 17 cases mace, 1s 1d to 1s 5d. 19 bags Penang white pepper, 6⅜d to 6¼d. 370 bags dusty brown Penang pepper were bought in at 3¼d. 296 bags pimento sold at 3¼d to 3⅜d per lb for low to good. 1,150 bags African ginger part sold at 37s to 38s; 350 bags Bengal brought 22s to 22s 6d; 60 cases Cochin, 76s to 78s; and 316 barrels Jamaica, 85s to 165s per cwt.

SALTPETRE.—1,700 bags Bengal, by auction, were bought in: refraction 18¾ to 6¾, 38s to 43s per cwt.

COCHINEAL.—247 bags partly sold at the previous value.

LAC DYE.—556 chests various marks were nearly all bought in.

OILS.—Ceylon in public sales part sold at 46s; Cochin was chiefly bought in at 47s. 382 casks palm part sold at 43s to 45s per cwt. Sperm oil and headmatter partly sold at 92*l* 5s to 96*l* 5s. Southern whale at 34*l* to 35*l* per ton.

TALLOW.—Foreign dull again. Town unaltered. 110 pipes South American, by auction, went at 51s 3d to 53s 3d per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar remains firm; rather higher prices paid for fine pieces and bastards. No alteration in any other description of goods.

GREEN FRUIT.—The sale of pine apples continues brisk; 15,000 sold by Keeling and Hunt at public sale, went at an advance of 2d to 3d per pine. Lemons of good quality sustain their value. Stock light. Less inquiry for nuts, owing to a more liberal supply of fresh fruits to market.

DRY FRUIT.—In currants there is a greater degree of firmness than has been visible for some weeks; and, though buyers are scarce, 1s advance has been paid. Raisins, notwithstanding the reports of extension of blight in Denia, had shown a further decline, and 21s has been accepted for a considerable parcel of Valentias. Chesmes are very dull at 26s.

SEEDS.—The prices of all kinds have advanced under unfavourable prospects of crop.

ENGLISH WOOL.—Very little doing except in deep grown wools. Prices steady.

COLONIAL WOOL.—There is not any change in the market, and sales are expected to open firm on Thursday next at last sale's rates.

HEMP.—Russian a little firmer, with less disposition to sell goods on the spot.

COTTON.—Sales of cotton wool from Friday, 6th July, to Thursday, 12th July, inclusive:—900 bales Surat, at 3d to 3⅜d for very middling to middling fair; 600 bales Madras, at 4¼d to 5¼d for fair to good fair Tinnivelly. By private contract a fair amount of business has been transacted at last week's prices, and the market is rather steadier. Yesterday 4,800 bales Surat, 2,370 Tinnivelly, 66 Carriacou, and 42 sawginned St Vincent's were offered at public sale. Of the Surat, 2,000 bales were sold at and after the sale, viz.: 1,500 fair to good fair Dholleras and Oomrawattee, at 3⅜d to 4¼d, being full prices; and about 500 various descriptions, at 3d to 3⅛d and 4⅛d for good fair sawginned. Of the Tinnivelly, 500 fair to fully fair were sold at 4⅜d to 4⅝d, being a decline of ⅛d to ¼d per lb; and of the Carriacou, 21 bales were sold at 8⅜d per lb. The remainder of the cotton was bought in at full prices. Sales to-day:—500 Tinnivelly, 4⅜d; 150 Surat, 4¼d.

TOBACCO.—Sales of Western leaf and strips have been made to a fair extent at prices in favour of buyers, especially for parcels and middling to ordinary sorts.

TIMBER.—The fresh supplies of wood come forward slowly, and considerable portions of the arrears of stock on hand have been removed from the docks for consumption. We can quote the full prices for Swedish fir timber, and for all yellow deals and battens. Of whitewood deals and battens the fresh supply has been large, particularly of Norway wood, and the demand does not increase, as was expected, to the displacement of the spruce deals of British America. The prices of spruce deals have advanced 1*l* on the lowest rates previously quoted. For pine deals and all other Canadian wood there will be no certain guide until the importation takes place. The ship-building trade is dull, the local demand being of little avail in the sustaining of the present high import prices.

LEATHER AND HIDES.—The shock sustained in the leather market by the recent failures has, as might have been expected, almost entirely suspended business during the past week. At Leadenhall on Tuesday there were, however, some symptoms of returning calmness and confidence. The sales effected were only to a small extent, and a decline of 1d per lb may be quoted on most articles. Market hides, which, in the panic of the previous Tuesday, were sold at so very great a reduction, were in small supply on Friday last, and nearly recovered the decline they had sustained. Yesterday there was scarcely any alteration from Friday's rates, but prices were rather in favour of the buyer. At the public sales this week, 3,000 salted Australian hides (an indirect importation), were scarcely noticed; and 460 dry Buenos Ayres horse hides were withdrawn. Of 74,400 East India kips 46,800 were sold at a slight advance for those of heavy weights: the lighter descriptions were a shade lower. The chief demand was for exportation. 1,287 drysalted Mogadore kips brought 5¾d to 7¾d; seconds and wet, 4d to 4¼d. Not any River Plate hides were offered.

METALS.—Business in metals continues to be done only on the smallest scale. Copper is well maintained in price, and a rather better demand exists for fine foreign. Iron—The quarterly meetings have been held this week without any change in prices, nevertheless it is generally admitted that orders come forward but slowly. Tin is well supported in prices by a steady demand. Spelter is flat, and little is doing even at reduced prices. Lead, also, is very flat. Tin plates sell pretty fairly, but prices are rather weak.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	55	0
Fat by ditto	2	0½
Yellow Russian	54	9
Melted stuff	56	6
Rough ditto	22	6
Greaves	16	0
Good drags	7	0

Imports this week 2,568 casks.

Rest	3,335,113	Other Securities	19,616,568
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	4,120,050	Notes	8,033,180
Other Deposits	15,388,935	Gold and Silver Coin	769,985
Seven Day and other Bills	738,609		
	38,135,107		38,135,107

Dated the 12th July, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,641,854	Securities	29,253,142
Public Deposits	4,120,050	Coin and Bullion	16,232,810
Private Deposits	15,388,935		
	42,150,839		45,485,952

The balance of Assets above Liabilities being 3,335,113*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£7,459
A DECREASE of Public Deposits of	4,089,319
An INCREASE of Other Deposits of	1,640,809
A DECREASE of Government Securities of	103,309
A DECREASE of Other Securities of	2,053,602
A DECREASE of Bullion of	264,120
An INCREASE of Rest of	4,938
A DECREASE of Reserve of	206,300

The above returns show, by the small decrease in the circulation, that the bankers and public still hold at the date of this return the notes of the Bank, in order to meet any contingencies that might arise from the unsettled state of credit arising from the late failures.

The public deposits have, of course, been lessened by the payment of the dividends.

The decrease of other securities represent the repayments to the Bank on the opening of stock for transfer, and amounting as they do only to 2,053,602*l*, shows that the demand for money at the Bank must have been very considerable, which is still further proved by the fact of the small increase of other deposits as compared with the decrease in the public deposits, and also by the still further decrease in the reserve.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,605,635	£ 20,702 003	£ 21,625,188	£ 22,575,737	£ 22,641,854
Public deposits	5,090,507	3,107,922	2,525.291	4,871,793	4,120,050
Other deposits	11,263,012	10,918,691	15,616,388	16,364,798	15,388,035
Government securities	14,294,583	10,218 724	10,587,486	11,420,680	9,714,574
Other securities	10,822 249	16,455,171	15,620,435	17,802,911	19,616,568
Reserve of notes & coin	10,570,787	6,104,915	10,590,306	10,704,261	8,803,965
Coin and bullion	16,841,307	11 592,160	16,898,666	17,941,791	16,232,810
Bank rate of discount	2½ p. c.	6 p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	96⅞	91¼	95⅛	95⅛	95⅛ xd
Average price of wheat	41s 3d	63s 10d	43s 4d	46s 9d	57s 9d
Exchange on Paris (short)	25 40 47½	25 25	25 2½ 10	25 5 10	25 7½ 15
— Amsterdam ditto	12 1½ 1⅝	11 17 18	11 15	11 11 12	11 14⅛ 18
— Hamburg (3 months)	13 11½ 11⅝	13 8½ 8⅝	13 6½ 7	13 3½ 3⅝	13 5 5½

In 1850, most public stocks were firm in price, although money was in request for commercial purposes. Consols, for money, were done as high as 97. The Continental Exchanges were steady.

In 1857, the course of affairs in India was anxiously watched. A large number of troops were being sent out, and the financial embarrassments of the Government had commenced. The rate of discount at the Bank of England, however, was upon the point of being reduced from 6 to 5½ per cent.

In 1858, the arrivals of gold were large, and money very easy. The Queen was about to visit Cherbourg.

In 1859, money was very abundant; the rate of discount at the Bank of England was 2½ per cent., and in Lombard street 2¼. Preliminaries of peace had been signed between France and Austria.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 740,733*l*; in 1857, a deficiency of 5,536,480*l*; in 1858, a deficiency of 4,047*l*; and in 1859, a deficiency of 1,438,113*l*. In 1860, the deficency is 4,227,633.

DISCOUNT AND MONEY MARKET.—Money is abundant, but in good demand. In certain exceptional cases bills have been discounted a fraction below 4 per cent., but, generally speaking, an active demand has taken place during the week at that rate in Lombard street and at the Bank of England. The fineness of the weather, however, induces many to believe that the rate of discount will be easier.

The rate of money allowed by the discount houses at call is 3 per cent., and at 7 days' notice 3½ per cent.

The following are the rates of discount in

	Bank rate. Per cent.	Open market. Per cent.
London	4	4
Paris	3½	3
Amsterdam	3	3
Brussels	3	3
Berlin	4	4
Frankfort	2	1½
Hamburg	No Bank rate	2
New York	...	4½ to 5
St Petersburg	5	5 to 6
Vienna	5	4½

It will be observed that the only changes since our last week's report is a rise of ½ per cent. in the rate at Amsterdam, and ¼ per cent. at Hamburg.

We observe that the Commissioners of the National Debt will only apply 8,244*l* 18s 3d to the purchase of stock during the present quarter, and the balance of one-fourth of the surplus, amounting to 396,000*l*, will be applied to the payment of Deficiency Bills, therefore the Exchequer Bill market, which can scarcely be sustained at par, will receive no relief from that quarter. The surplus revenue for the quarter ending 30th March amounted to 1,587,379*l* 13s 2d.

ENGLISH FUNDS.—The extreme fluctuations in the English funds during the week have been from 93½ to 93⅜. The closing price to-day is 93⅝ buyers. A steady, although limited, demand for stock on the part of the public exists, and the consequence is that the disparity in price between Reduced and New 3½ per Cents. and Consols, to which we have drawn attention for the last three weeks, has approximated during the week ⅛ per cent., the difference being now ⅝ per cent. instead of 1 per cent., which it was when we first drew attention to the subject.

There is still, however, a profit of ⅝ to be obtained by the exchange of Consols for New 3 per Cents. and Reduced; and we understand the Court of Chancery has made the exchange to-day of about 75,000*l* Consols for New 3 per Cents. at that difference.

Money has been very abundant in the Stock Exchange since the payment of the dividends, the rate being 2½ per cent. on Government Securities.

Money has been lent to-day on Exchequer Bills at 2 per cent. for a short period.

Nothing has transpired in the City relative to the manner in which the Chancellor of the Exchequer intends to raise the money required for the Chinese war and fortifications. It is to be hoped that the announcement will be made this evening, as it keeps the money market in suspense.

Exchequer Bills continue very heavy at 1s discount to 2s premium.

FOREIGN FUNDS.—The transactions in the foreign funds have been very limited during the week. A considerable rise has, however, taken place in Peruvian 4½ and 3 per Cents., the former having been done at 95 and the latter at 72. It is supposed the rise has taken place in anticipation of purchases on account of the Sinking Fund.

Spanish Bonds have been rather heavy. It is stated, however, that the Spanish Government have decided on placing on the 31st inst. about 95,000*l* sterling at the dis-

posal of the Board of the Public Debt for the purchase of 3 per Cent. Consolidated and 3 per Cent. Deferred stock of the National and Foreign debts in equal proportions.

Turkish Bonds are rather better to-day, in consequence of the united action of France, England, and Russia in suppressing the atrocities in Syria.

The new Russian Loan is quoted nominally $\frac{5}{8}$ to $\frac{7}{8}$ prem., but the transactions are very limited.

An instalment of 15 per cent. falls due on the Russian Loan of 5,000,000*l* on the 16th instant; and an instalment of 8 per cent., making 58 per cent. paid, on the Canada Loan of 2,800,000*l* on the 17th inst. The amount actually payable in the latter case is, however, only 5½ per cent., 2½ per cent. interest being due on the 1st inst.

The last price of French funds this afternoon is 69.15, showing an improvement.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

Consols

Railways.—The railway market has been well supported during the week, but the fluctuations have been, comparatively speaking, small, as will be seen by a comparison of the closing prices of to-day and last week:—

Russian Railways.—A letter, dated St Petersburg, the 1st July, contains the following intelligence relative to Russian railways:—

The Emperor, with the assent of his Ministers, has adopted the following resolutions, at the demand of the Board of Directors of the Great Russian Railway Company:—

1. The capital guaranteed on the line from Moscow to Theodosia, and on that from Liebau to Orel or to Kusk, that is on a distance of 2,400 wersts, is raised from 62,500 to 80,000 roubles.

2. The division of profits on the line from Warsaw will commence after the Company has divided 8 per cent., instead of 5, as had been stipulated in the original concession to the extent of 18,000,000 roubles, the cost of the works executed by the Government when the concession was made.

3. The guarantee of interest on the part of the State will take place for each line separately, and not altogether, as was first agreed.

4. The Company is authorised to issue either bonds or shares, at their choice, as far as the half of the capital of the Company for each description of security.

5. The Nicholas Railway, from St Petersburg to Moscow, will be sold to the Company when the price is arranged.

6. The Board of Directors is authorised to increase the capital of the Company by the issue of bonds or shares.

When the Emperor signed these resolutions, Messrs Baring, Pereire, Hollinguer, and Baron Sellieres quitted St Petersburg.

Bullion.—Messrs Pixley, Abell, and Langley's Circular gives the following particulars in regard to bullion, the exchanges on India, and Indian Government paper:—

Gold.—But little has been doing in gold since our last circular of the 5th inst., and we have only to report the following arrivals:—The Arago, from New York, with 30,000*l*; the Vigo, from New York, with 91,000*l*; the Niagara, from New York, with 50,000*l*; Armenian, from West Coast of Africa, 2,600*l*. And these amounts have been taken for exportation. The vessels now on the way from Australia are:—The Maid of Judah, out 92 days; the Eagle, out 85 days; the Kent, out 80 days; bringing together nearly 500,000*l*. And they were to be succeeded by the Agincourt, Leaping Water, Yorkshire, Jack Frost, and British Trident, and by each of these ships large amounts of gold would be sent. The Tyne has taken 24,250*l* to the Brazils.

Silver.—The market for silver is still flat; the Bombay steamer which leaves to-day will not take out a single box of specie—a most unusual occurrence. The letters from India and China will be here on Monday, and if orders come to hand, we may then look for a trifling recovery from the present price, which we quote to-day as 61½d per oz standard. The Delta has brought 4,032*l* from Alexandria, and the Sultan about 2,500*l* from the Peninsula.

Mexican Dollars.—The market is quiet for these, and holders are waiting the arrival of the letters from China. The Vigo brought 30,000*l* from New York, which have been sold; and we quote the price as 62½d per oz nominal.

Exchange on Bombay and Calcutta for 60 days' sight bank drafts continues nominal, at our last quotation of 1s 11½d to 2s 0½d; bills with documents, 1s 11d to 1s 11½d. Madras, 60 days' sight bank drafts, 1s 11⅜d nominal.

India Government Loan Notes have improved very decidedly during the past week. 5½ per Cents. have been dealt in to a fair extent at 102¼ to 102½, and 5 per Cents. at 97. This has been owing to the improved reports from India, where by last accounts, 5½ per Cents. had risen to 5¾ and 4 prem. at Bombay and Calcutta respectively.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 73s 9d to 74s per oz, last price; United States gold coin, 76s 2¾d per oz, last price. Silver—Bar silver, 5s 1½d per oz std, last price; bar silver, containing 5 grs of gold, 5s 1¾d per oz std, last price; fine cake silver, 5s 6½d per oz; Mexican dollars, 5s 2½d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11½d to 4s 11⅝d per oz, last price.

In addition to the arrivals mentioned in Messrs Pixley's Circular, the following vessels have arrived:—The Shannon, from West Indies and Pacific, 773,721 dollars; City of Washington, from New York, 622,740 dollars; Hammonia, ditto, 184,940 dollars; or about 316,000*l* sterling.

No bullion transactions have taken place at the Bank of England this week.

Failures.—The *Manchester Guardian* announces the suspension of Messrs Robert Freeland and Brothers, shippers to India. Their liabilities are mentioned by the firm to be about 60,000*l*.

Another dividend of 1s in the pound has been declared on the estate of Messrs Reid, Irving, and Co., making altogether 7s in the pound.

A meeting of the creditors of Messrs J. Herbert Smith and Co., of Wyld's Rents, Bermondsey, was held to-day, when a statement of their affairs, prepared by Messrs Quilter, Ball, Jay, and Co., was submitted, showing on the debtor side unsecured creditors, 122,544*l* 9s 10d; creditors secured, 3,380*l* 17s 4d only; liabilities on bills receivable, 83,377*l* 11s 6d, of which it is estimated 43,562*l* 7s 1d are bad. The total liabilities are 168,306*l* 6s 7d. On the other side of the account there is cash in hand, 2,107*l*; bills receivable, estimated to realise 1,172*l*; debtors, good, 9,342*l*; doubtful, 4,711*l*, estimated to yield 1,468*l*; while the bad debts are 88,811*l*. The stock in trade is valued at 20,984*l*. There is 9,000*l* private property in a legacy to Mr Smith, with sundry assets amounting to 3,000*l*. The total assets are estimated at 46,654*l* 8s 1d, showing a nominal deficiency of 121,652*l*. A composition was offered of 5s in the pound,

payable at three, six, nine, and twelve months, the two first instalments of 1s 6d each, the last two of 1s each; the first three on promissory notes, the last guaranteed. There was also a proposition to wind up the estate under inspection, but the composition was accepted, subject to the approval of a committee of three gentlemen who are to inquire and report upon Mr Smith's interest in the San Domingo Mine.

The suspension of Messrs D. and J. Macintosh is stated to arise merely from a desire to protect themselves pending the results of the late crash in the leather trade; and it is alleged that they will pay in full. It is calculated that, including large and small houses in town and country, the late crisis in this trade has resulted in the stoppage of something like 120, but of this number only about 20 to 25, or thereabouts, are of any consequence. The small failures referred to include persons engaged in the hide and skin trades, tanners, leather merchants, boot and shoemakers. To the lists previously given have to be added Messrs Parker and Co., of Northampton (liabilities 50,000*l*); Messrs Ridley and Son, of Newcastle-on-Tyne, for 35,000*l*; and Messrs Rider and Co., of Paris. Their liabilities are estimated at 45,000*l*, and the event is attributed to the failure of Messrs Streatfeild. The books of the house have been placed in the hands of Messrs Coleman, Turquand, and Co.

A meeting of creditors of Mr R. Mortimer, tanner, of Chippenham, who lately stopped, was held to-day, when a balance-sheet was presented, showing liabilities 34,400*l*, and assets estimated to yield 17,500*l* net. A composition of 10s in the pound was proposed, but the consideration of this offer was adjourned for a week, pending a further examination by Messrs Coleman, Turquand, and Co. into the accounts.

Meetings of Public Companies.—The Union Bank of London held its annual meeting on the 11th—Mr Northall Laurie presiding—when the report submitted to the meeting with the exception of one proprietor dissenting, was unanimously adopted, and a dividend of 12s per share for the last six months ending 30th June was declared, making, with the dividend and bonus paid in January last, 12½ per cent. on the sum of 720,000*l*, the paid-up capital of the Company.

The general balance sheet will be found in our advertising columns.

The chief interest of the meeting turned on the mode of dealing with the frauds committed by Pullinger, which were ascertained to amount to 263,125*l* 6s 10d, less 11,116*l* 14s 10d realised out of his property, which reduced them to 252,008*l* 12s.

The investigation of the Directors showed that this sum had been disposed of in the following manner:—

Sums credited to four stock brokers, in their accounts current with this Bank, which were not received, 84,058*l* 18s; sums credited in the same way to a bullion broker (Nathan), 57,559*l* 3s 2d; sums credited in the same way to two other persons, customers of the Bank (J. Thornhill and Parr), 1,543*l* 15s; sums received from the counter cashiers to take up bills, but not so applied, 25,463*l* 10s 8d; sums credited to various parties, and supposed to be in cheques handed to the counter cashiers, but afterwards withdrawn by Pullinger, and not presented for payment, 11,400*l*; amount of gold charged as paid to the Bank of England, but not received by it (small amounts of which were abstracted in coin, but the bulk of it is believed to have been exchanged for notes in the office), 83,100*l*; total, 263,125*l* 6s 10d. Of this amount, 117,274*l* 15s 2d has been traced as payments to members of the Stock Exchange, and is supposed to represent losses sustained by Pullinger in time bargains. The investigation also shows that 62,799*l* 6s 2d has been traced to the bullion broker referred to—who is known to have been largely engaged with Pullinger in speculative operations, but was not a member of the Stock Exchange. These sums, amounting together to 180,074*l* 1s 4d, leave an amount of 83,051*l* 5s 6d not yet traced to parties as having received it.

It is now known that Pullinger had an interest in certain race horses, and that he had betted largely on races; but nothing has transpired to throw any doubt upon his own statement, that only a small portion of the money was lost in that way.

It will be seen, by the accounts appended to this report, that the Directors have realised 11,116*l* 14s 10d from property of various kinds that belonged to Pullinger; and though they have taken the safe course of assuming the balance as a loss, they can assure the proprietors that the subject engages their constant attention, and that no steps are neglected which may lead to the further recovery of property.

In order to meet these frauds, the Directors have appropriated, after having taken the opinions of Sir Hugh Cairns and Mr Daniel, Q.C., as to its legality:—

	£	s	d
1. The reserved fund, which realised	100,851	15	10
2. The reserved fund which was carried last year to the credit of capital account, which will have to be debited	120,000	0	0
Profits of the year	31,156	16	2
	252,008	12	0

The Chairman stated that this plan will not reduce the *nominal* amount paid on the shares, which will still stand at 12*l* each, and dividends paid on that amount. Also, that since the commencement of the Bank 1,000,000*l* has been paid in dividends, and 1,400,000*l* in interest on deposits. That the losses by Pullinger have been a severe blow, but that the confidence of the public had not been shaken. In the week succeeding their announcement nine acccounts were withdrawn, but since then sixty-eight new ones have been added. The aggregate amount of deposits had also increased.

In answer to questions put by proprietors, it was stated that the balances were as follows:—

On the 30th June,	1857	... In the Union Bank	£391,347
—	—	... Ditto Bank of England	198,188
—	1858	... Ditto Union Bank	378,557
—	—	... Ditto Bank of England	294,832
—	1859	... Ditto Union Bank	452,564
—	—	... Ditto Bank of England	343,255
—	1860	... Ditto Union Bank	355,271
—	—	... Ditto Bank of England	668,457

The deficiency in the Pullinger frauds:—

On the 30th June,	1855	£23,900
—	1856	35,400
—	1857	66,222
—	1858	209,969
—	1859	234,924
On the 19th April,	1860	263,125

The pass-book of the Bank of England was in more than one handwriting, but whose had not been discovered.

The past due bills amounted to 11,738*l*, against which securities were held amounting to 15,000*l*, out of an aggregate of nearly ten millions.

The Chairman also stated that the accounts were audited by a Committee of the Board, which he preferred to a public audit. Also, that no losses had been sustained by the late failures in the leather trade—a statement which gave great satisfaction to the meeting, who passed a vote of thanks to directors, manager, and other officers of the establishment, and expressed their entire confidence in their management. As the payment of losses out of capital has given rise to much controversy in the City, we append the case submitted to Sir Hugh Cairns and Mr Daniel, Q.C.:—

[Case.]

Whether after applying the existing surplus fund, and the whole or a part of the current half-year's profits, to the liquidation of the present deficiency, the directors or the shareholders, by a majority of votes at a general meeting, specially convened for the purpose, had power to write off the balance of the present loss against the capital of the Company?

[Answer.]

We are of opinion that it is within the powers of the Company to resolve by a majority at a general meeting duly convened, that the loss of 263,000*l* sustained in consequence of the frauds referred to, shall be made good in the manner pointed out, that is to say—first, by applying so much of the capital as consists of the 120,000*l* capitalised in July, 1859; secondly, by applying 100,000*l* of the reserve fund; thirdly, by applying 40,000*l* out of the year's income; and we are further of opinion that the Company may in like manner resolve that all or any part of the remainder of the earnings of the year shall be divided as a dividend.

The report of the Bank of New South Wales, presented at Sydney on the 25th April, for the half-year ended the 31st of March, showed an available total of 50,553*l*. A dividend was accordingly declared at the rate of 15 per cent. per annum, leaving 3,277*l* to be carried forward. In consequence of the losses from the recent failures, no addition was made to the reserve fund. A branch has been opened at the new goldfields on the Snowy River.

The half-yearly meeting of the London and Greenwich Railway was held yesterday at the offices, Gresham House, Mr Josiah Wilson in the chair. The report stated that the stipulated rent for the half-year had been received from the South-Eastern Company, and the interest paid on the Company's bonds and preference stock. On the motion of the Chairman the report was adopted, and a dividend declared at the rate of 1*l* 7s 6d per cent., or 5s 6d per share on 43,077 shares, absorbing 11,846*l* 3s 8d, when the proceedings terminated.

MISCELLANEOUS.—Advices from China, dated 23rd May, quotes the rate of exchange without any material alteration, viz., at Hong Kong 4s 10d, and 6s 7½d at Shanghai. The exports of tea to that date were 78,000,000 lbs of tea, and of silk 65,000 bales. The British force had left for the Peiho.

The *Moniteur* contains the following notifications relative to goods passing through France in transitu :—

1. All restrictions and formalities in the case of goods declared to be on transit are henceforward suppressed, whenever the goods belong to that category of articles whose importation as well as exportation have been altogether freed of duty.

2. Whenever the goods declared to be on transit belong to that category of articles whose importation is free of duty, while the exportation is not, a ticket of free passage is to be substituted for the conditional quittance now resorted to, and which have evidently no meaning with regard to articles not charged with import duties.

3. The practice of double plumbage, and of taking a pattern of the articles, is to be discontinued concerning a certain number of articles, when on transit, particularly colonial goods.

4. Suppression of plumbage, as well as mark in the case of animals of burden and beasts—milch cows and hogs included.

A Bill has been presented to the French Legislative Body to enable the city of Paris to borrow 143,809,000f (about 5,772,040*l*) in bonds of 500f (20*l*) each.

The *Moniteur* of to-day contains the monthly returns of the Bank of France. The principle alterations are—

	£
Decrease in Bullion	1,500,000
— Current accounts	750,000
Increase in Advances	560,000
— Bills discounted	2,160,000
— Bank Notes	1,700,000
— Treasury Balance	50,000

The only thing worthy of notice in these returns is the decrease of bullion, amounting to nearly 1,500,000*l* sterling, and an increase in the bills discounted to the extent of 2,100,000*l*, which would indicate a revival of trade.

The expenditure for the year, as fixed by the French Budget, amounts to 1,840,121,858f, or upwards of seventy-two millions and half sterling.

Accounts from the Cape of Good Hope state that the subject of the Table Bay harbour works had been prominently brought before the Legislature, and it was to be proposed that the Government issue debentures to the extent of 300,000*l* for the purpose—the wharfage dues and harbour revenue, amounting to 20,000*l* a year, to be hypothecated for the payment of the interest. The estimated expenditure for the construction of roads and bridges for 1860 was 125,150*l* 15s. A return of the Customs revenue for the first four months of the year gives a sum of 94,499*l* 7s, against 83,883*l* 18s in the same period of 1859.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3½ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 2-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 109¾ to 109¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; and after making allowance for charges of transport and difference of interest, the present rate leaves a small profit on the importation of gold from the United States.

The Commercial Times.

EXTENSION OF BOOK POST TO LABUAN.—On the 1st August next, and thenceforward, the provisions of the colonial book post will be extended to books transmitted between the United Kingdom and Labuan by packet viâ Singapore. The postage on book packets addressed to Labuan will be as follows:—If sent in the mail from Southampton, for a packet not exceeding 4 ounces in weight, 4d; above 4 ounces and not exceeding ½ lb, 8d; above ½ lb and not exceeding 1 lb, 1s 4d. If sent in the mail viâ Marseilles, for a packet not exceeding 4 ounces in weight, 6d; above 4 ounces and not exceeding ½ lb, 1s; above ½ lb and not exceeding 1 lb, 2s. The postage must in all cases be paid in advance by means of postage stamps.

MONEY ORDER OFFICES AT GIBRALTAR AND MALTA—1. On the 1st of August next, the post offices at Gibraltar and Malta will be empowered to pay as well as to issue money orders, and from that date money orders will be issued at all money order offices in the United Kingdom on Gibraltar and Malta. A commission of 9d will be charged on any sum not exceeding 2*l*, and of 1s 6d on any sum above 2*l*, and not exceeding 5*l*. Beyond this latter amount no single order can be issued. 2. The issue of money orders under this arrangement will, in all other respects, be on the same conditions as regulate their issue by one office on another in the United Kingdom. As, however, the advice authorising payment of an order must always pass through the metropolitan office, it may occasionally reach Gibraltar or Malta, as the case may be, some days after the order itself, and hence there may sometimes be a short delay in the payment.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

At Mark lane, this morning, little or nothing was doing in wheat, either English or foreign. Compared with Monday, however, no change took place in the quotations. Oats were in request, at 1s per quarter more money. All other produce, as well as flour, moved off slowly, on former terms. The imports this week are 8,990 quarters of wheat, 3,920 barley, 26,840 oats, 1,150 sacks and 1,770 barrels of flour. From nearly all parts of the country favourable advices have come to hand in reference to the crops.

At Liverpool, to-day, produce generally changed hands slowly on former terms.

The state of the grain trade at Alexandria to the 27th ult., is thus reported by Messrs Briggs and Co.:—

The intelligence of higher prices in England, and of the continued prevalence of unfavourable weather for the growing crop, had an immediate effect upon our markets, and prices of all descriptions of grain and pulse underwent a material advance. At the latter end of the week the market slightly subsided, but since the arrival of the mail, with London dates to the 18th instant, prices have again become very firm. The following is the usual note of sales to this day, and present quotations of prices free on board:—Wheat, Saide, 10,900 qrs, 36s 6d to 37s 9d; ditto, Behera, 6,280 qrs, 35s to 36s 6d; ditto, ditto (white of Pacha's produce), 630 qrs, 37s to 37s 4d; beans, Saide, 2,600 qrs, 26s 9d to 27s 6d; ditto, Behera, 5,700 qrs, 25s 6d to 26s 3d; barley, 2,170 qrs, 20s to 21s; chick peas, 140 qrs, 33s 6d to 34s 6d; Indian corn, 95 qrs,

28s; lentils, 25s 6d to 26s nominal, per quarter. Freights—The excessive scarcity of shipping has caused a heavy advance in freights, which must now be quoted as follows, namely, for beans to the United Kingdom for orders, and other grain in proportion, 6s 6d to 7s per quarter by small vessels, 5s 10d to 6s 6d for vessels of 2,500 qrs and upwards; grain to a direct port 4s 9d, Liverpool about 4s 6d. Exchange on London at 3 months' date opened on the 23rd instant at 96½ per £; but paper is now freely offered at 96¼.

There has been an increased demand in the Liverpool cotton market during the week, in consequence of advices received this week from America, stating that the next crop is likely to be much affected by excessive drought, which has of late prevailed there. The sales have amounted to 76,000 bales, including 53,500 bales to spinners, 5,500 on speculation, and 17,000 bales for export. Prices are partially enhanced ⅛d per lb for the week, but the choice is so large that a general advance could not be obtained. The sales to-day are 10,000 bales, without change.

Messrs Briggs and Co., of Alexandria, have forwarded the annexed report of the cotton trade to the 28th ult.:—

Cotton has been dearer, but the paucity of the stock allows of little being done. The sales from 19th to 27th inclusive have been only 291 bales. Refuse to middling, at 5¼d to 8¼d per lb free on board. Freights, by steamers, are at 5-16ths nominal. Exchange opened at 96¼ piastres and closes at 96¼ piastres. Export of cottton in bales from 1st to 16th June, 1860:—Great Britain, 1,935; France, 760; Austria, 51; total, 2,746.

Advices from New York to the 30th ult. bring no material change in the value of cotton. At New Orleans on the 29th ult. prices were rather drooping. One report says:—The stock on hand unsold amounts to 50,000 bales. The weather continues favourable, and the advices from the country are satisfactory. We quote—Good ordinary, 8¼c; middling, 10¾c. Receipts during the week ending to-day, 1,300 bales; sales, 2,800 bales. Exports to Liverpool, 6,000 bales; Havre none; other foreign ports, 600 bales. Vessels loading—for Liverpool 10, Havre 2, other foreign ports 10. Exchange—Sterling 10 per cent. premium, France 5 10. Freights to Liverpool 15-32d, Havre 1c.

The public sales of tea, held this week, have gone off heavily, and, in some instances, prices have declined 1d to 1½d per lb. Privately, the demand has fallen off.

Import of Tea in London, from Jan. 1 to June 30, 1860, and the Stock on hand on July 1, 1860, compared with the corresponding date in 1859.

The quantity of tea now on passage from China amounts to 10,027,900 lbs, against 9,422,200 lbs at the corresponding period in 1859. The total exports to the 22nd of May were 78,373,000 lbs.

All raw sugars have been in improved request, and prices have ruled in favour of sellers. Refined goods have changed hands freely, and fine pieces are worth 45s 6d to 46s per cwt.

We have very little change to notice in the value of coffee. The demand, however, has continued somewhat restricted.

Rice has sold slowly on former terms, owing to the heaviness in the wheat trade.

As the public sales of colonial will commence next week, the wool trade has been in a most inactive state, and prices have ruled almost nominal.

"The improved demand for silk," observe Messrs Durant and Co., "continued throughout June, resulting in large business at the advanced prices then established. During the last week there has been rather less doing, the accounts from the Continent inducing the idea that the European crop may be less unfavourable than was at first anticipated. The particulars annexed show that the deliveries of the month were very large in all classes—in Chinese thrown silk especially, and this the first time for many months they had approached any decent figure. Bengal silk shared fairly in the generally improved demand, and holders availed themselves of the opportunity to push off several large parcels of very old silk. In Italian silk nothing: it is yet too early for the arrival of any new silk: the prices now mentioned for the probable cost are materially less than at one time contemplated, but still far beyond any point of competition with Asiatic silk. In Brutia and Persian silk nothing of moment.

State of the Silk Warehouses.

M. Arles Dufour, of Lyons, writing on the 10th inst., thus refers to the silk trade:—

Although not entirely terminated, the silk crop is sufficiently advanced to allow of an appreciation being formed regarding its general results. Prices paid for cocoons are still very high, and will bring the cost of new silk very near the parity of our present quotations. Transactions have been rather limited during the last two weeks, manufacturers being provided for the execution of orders placed.

Deliveries of Silk through the Lyons Condition House.

	bales.	kilogs.
From May 1 to 31, 1859	3,200	243,000
From May 1 to 31, 1860	2,810	206,000
From June 1 to 30, 1859	3,300	250,000
From June 1 to 30, 1860	3,310	248,000

The public sales of indigo commenced on Tuesday. They have comprised 15,207 chests, consisting of 14,307 in Catalogue A—viz., 10,353 Bengal, Benares, &c., 649 Plant Oude and Oude, 1,267 Madras, 1,913 Kurpah, 13 Java, 11 Pondicherry, and 101 fig, and in Catalogue B 900 chests sundries. The sale opened by importers chiefly buying in at from May rates at 3d discount, only a few being sold, the trade exercising considerable reserve. Importers having shown in some instances a more evident disposition

to meet the market, the decline on middling and ordinary Bengal, later in the day, became decided, and ranged from 3d to 4d per lb lower than the May sale, and in some instances in damp, heavy, weak indigo even more. The good shapely shipping qualities, dry and coloury, sold at the last sale's prices. The few Kurpah Madras passed of ordinary and low quality sold from May rates to a slight decline. To-day, several parcels of Kurpah and dry leaf Madras have passed, and sold with spirit at from last sale's prices to 3d advance for the good and fine qualities, about par for ordinary to middling, but the very low sorts have remained neglected, even at a discount of 3d to 4d per lb. There is no alteration to notice in Bengal. The proportion bought in this day is 260 chests, leaving 754 sold. Of the quantity which has now passed the hammer (4,755 chests), 1,037 have been withdrawn, and 1,000 bought in, leaving 2,718 sold.

Very little has been passing in rum, and, where sales have been forced, prices have had a drooping tendency. Brandy and grain spirits have maintained their previous value.

Scotch pig iron is selling at 52s 9d cash mixed numbers. In the value of other metals, very little change has taken place. Fruit and saltpetre have ruled heavy, whilst hemp and flax have commanded very little attention.

There has been a fair demand for linseed oil, at 28*l* 10s to 28*l* 15s per ton. Most other oils have moved off slowly, but at full prices.

The tallow market has continued steady, at 52s 9d for P. Y. C., on the spot. The latest advices from St Petersburg are of a dull character.

PROVISIONS.

Bacon market flat, prices a little easier. 74s to 75s f.o.b. for prime sizeable Waterford bacon is made with difficulty. Pigs still very high on other side. Butter market buoyant; a shade dearer.

METROPOLITAN CATTLE MARKET.

MONDAY, July 9.—The total imports of foreign stock into London last week amounted to 11,806 head. In the corresponding week in 1859 we received 5,939; in 1858, 8,696; in 1857, 5,848; in 1856, 7,629; in 1855, 4,710; and in 1854, 5,788 head.

Prime beasts sold steadily; other kinds slowly at last Monday's currency. The general top figure for beef was 5s 6d per 8 lbs. The show of sheep was moderately good; but there was a great deficiency in quality of all breeds. Prime Downs and half-breds were in fair request, at full quotations; otherwise the mutton trade was inactive at late rates. There was less activity in the lamb trade; however, compared with last week no quotable change took place in prices. Calves supported last week's currency, with a fair demand. The supply was tolerably good.

SUPPLIES.

	July 12, 1858.	July 11, 1859.	July 9, 1860.
Beasts	4085	3735	3720
Sheep and Lambs	28500	28530	25900
Calves	470	291	298
Pigs	440	350	348

THURSDAY, July 12.—Only a limited supply of beasts was on offer in to-day's market. The demand for most breeds, however, was inactive, at Monday's currency. We were fairly supplied with sheep, which moved off steadily, at full quotations. Lambs, the show of which was moderately good, were firm in price, with a steady inquiry. There was a full average business doing in calves on former terms.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	4	0	4	4	Prime Southdown sheep	5	4	5	6
Second quality ditto	4	6	4	10	Large coarse calves	4	6	5	0
Prime large oxen	5	0	5	2	Prime small ditto	5	2	5	6
Prime Scots, &c.	5	4	5	8	Large hogs	4	0	4	6
Coarse and inferior sheep	4	0	4	4	Small porkers	4	8	5	0
Second quality ditto	4	6	4	10	Suckling calves...each	19	0	23	0
Prime coarse-woolled do.	5	0	5	2	Quarter old store pigs	23	0	29	0

Lambs, 6s 0d to 7s 0d.

Total supply—Beasts, 837; sheep and lambs, 11,600; calves, 480; pigs, 312.
Foreign supply—Beasts, 520; sheep, 2,000; calves, 320.

NEWGATE AND LEADENHALL.

FRIDAY, July 13.—Only moderate supplies of meat are on offer in these markets. The demand is very inactive; nevertheless, prices continue firm.

Per 8 lbs by the carcase.

	s	d	s	d		s	d	s	d
Inferior beef	3	10	4	2	Mutton, inferior	4	2	4	4
Middling ditto	4	4	4	6	— middling	4	8	5	2
Prime large	4	6	4	8	— prime	5	4	5	6
Prime small	4	10	5	0	Large pork	4	0	4	8
Veal	4	0	5	2	Small pork	4	10	5	4

Lamb, 5s 0d to 6s 2d.

HOP MARKET.

BOROUGH, Monday, July 9.—The reports from most districts of the plantations are very much worse, fly being greatly on the increase, and the bine in many grounds perishing away. The trade to-day has been very active, and an advance of 6s or 7s per cwt has been freely given.

FRIDAY, July 13.—The market is very active, and the accounts from plantations are worse. Duty, 130,000*l* to 140,000*l*.

POTATO MARKET.

BOROUGH AND SPITALFIELDS, Monday, July 9.—Very few old potatoes are on sale here, and the value of them is almost nominal. New qualities are coming freely to hand in good condition, and the demand is firm, at from 6s to 14s per cwt. Last week's imports amounted to 10,209 baskets from Rotterdam, 1,860 ditto from Dunkirk, 8 ditto from Boulogne, 21 hampers 13 sacks from Hamburg, and 86 baskets from Oporto.

WATERSIDE, Thursday, July 12.—The season for old potatoes is now about over, and no stated prices can be given for those which are saleable. The supplies of new potatoes are moderate, and trade brisk at from 160s to 200s per ton, or 8s to 10s per cwt.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* 5s to 5*l* 5s; clover, 4*l* to 6*l* 6s; and straw, 1*l* 8s to 1*l* 16s per load. A fair demand.

CUMBERLAND.—Meadow hay, 3*l* 5s to 5*l* 5s; clover, 4*l* 4s to 6*l*; and straw, 1*l* 8s to 1*l* 18s per load. Trade steady.

WHITECHAPEL.—Meadow hay, 3*l* 3s to 5*l* 5s; clover, 4*l* 0s to 6*l* 6s; and straw, 1*l* 8s to 1*l* 16s per load. Trade tolerably firm.

New meadow hay sold at from 1*l* 16s to 4*l*; and new clover at 4*l* to 4*l* 4s per load.

COAL MARKET.

FRIDAY, July 13.—Wall's-end Acorn Close 17s 3d—Kepier Grange 17s 9d—Russell Hetton 17s 9d—South Hetton 18s 9d—Eden 17s 3d—Belmont 16s 3d—Auckland Park 16s—Hetton 18s 9d—Framwellgate 17s 3d—Heugh Hall 17s 3d—Tanfield Moor Butes 13s—Walker Primrose 13s—Davidson's Hartley 15s 9d. Ships at market, 37.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 13.—Since the close of our public sales the market has been rather quiet; still there is a fair inquiry for the more current descriptions, and they are held at very firm prices, as stocks continue to be but light.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 13.—Grain market steady. Wheat in good request at full rates. Flour dull. Indian corn rather easier. Galatz, 31s 6d. Mixed American the same. Beans unchanged and neglected. Oats, oatmeal, and barley quiet.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 13.—At the meeting of ironmasters, held this week at Birmingham, it was decided to make no change in the prices that have recently ruled for manufactured iron in the district, and there appeared to have been a fair amount of orders generally given out. In Scotch pig iron there has been less animation in the market this week, and prices have slightly receded. The operations in copper and lead only limited, and most other metals quiet.

The Gazette.

TUESDAY, July 10.

BANKRUPTCY ANNULLED.

J. Gibson, Todmorden, Yorkshire, manufacturer.

BANKRUPTS.

J. Nutt, Leadenhall street, jeweller.

EPITOME OF RAILWAY NEWS.

ENGLISH TRAFFIC RECEIPTS.—The traffic returns of railways in the United Kingdom for the week ending June 30 amounted to 555,190*l*, and for the corresponding week of last year to 509,660*l*, showing an increase of 45,530*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 249,643*l*, and for the corresponding period of 1859 to 229,643*l*, showing an increase of 20,048*l*.

IRISH TRAFFIC RETURNS.—The traffic returns of the following railways for the six months ending 30th of June show an increase of 25,662*l* over those of the coresponding period of 1859, namely, 476,842*l* against 451,180*l*. The traffic receipts on the Great Southern and Western amounted for the six months to 191,765*l*, against 180,205*l*,; the Midland Great Western to 108,257*l*, against 102,036*l*; Dublin and Drogheda to 43,122*l*, against 40,794*l*; Dundalk and Enniskillen, and Londonderry and Enniskillen to 40,182*l*, against 37,101*l*; the Dublin and Belfast Junction, 33,181*l*, against 31,251*l*; the Waterford and Limerick, 31,631*l*, against 31,363*l*; and the Dublin and Kingstown, 27,704*l*, against 27,530*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, July 9.—The railway market continued without the slightest animation, but generally with a firm tendency. Colonial descriptions remained without change. Grand Trunk of Canada stock closed at 28 to ½; ditto, ordinary bonds, 55 to 57; and preference bonds, 91 to 92. French railway shares and Dutch-Rhenish improved, while South Austrian and Lombardo-Venetian were dull at par to ¼. In American securities the bonds and shares of the New York and Erie advanced. Few transactions took place in mines, but prices were generally firm. No alteration of importance occurred in joint stock banks. In miscellaneous securities the announcement of the safe arrival of the Great Eastern at New York caused a rise in Great Ship shares, the ordinary leaving off at 12s 6d to 13s, and the preference, par to ¼ pm.

TUESDAY Ju 10.—In the railway market the principal feature was a rise of ⅛ per cent. in Lancashire and Yorkshire. London and North-Western and Great Western also improved, especially the latter. Other stocks were dull, and occasionally a slight decline was shown, the market being less steady at the close than at one period of the day. In colonial descriptions, Grand Trunk of Canada stock receded to 27¼ to 28¼. The bonds were steady, the ordinary issue leaving off at 55 to 58, and the preference, 91 to 92. Buffalo and Lake Huron improved 5s. Foreign shares were less firm, especially French. American railway securities and mines closed without change of importance. There were few transactions in joint stock banks, and the general tendency was a little unfavourable.

WEDNESDAY, July 11.—In the railway market there was a moderate business only, and the changes were unimportant. A slight improvement took place in Lancashire and Yorkshire, Great Western, and North British, and a similar decline in South-Western, South-Eastern, Caledonian, and Sheffield. In the colonial market, Ceylon shares improved. Grand Trunk of Canada stock remained at 27¼ to 28¼, and the preference bonds at 91 to 92; the ordinary debentures declined to 54 to 56. No change of importance occurred in foreign descriptions. In American railway securities, New York and Erie bonds were firmer. There was little doing in mining shares, and in some cases a reduction was shown, particularly East Bassett and St John del Rey.

THURSDAY, July 12.—The railway market was inactive, but well supported. In one or two stocks a slight advance took place, particularly Caledonian, Berwick, Sheffield, and Eastern Counties. In the colonial market Great Western of Canada shares and Grand Trunk stock improved. Foreign descriptions continued generally neglected. Bahia and San Paulo were quoted a fraction higher, while South Austrian and Lombardo-Venetian remained dull at par to ¼ pm. The only change of importance in American railway securities was a decline in the shares of the Michigan Central. Mines were again rather heavy.

FRIDAY, July 13.—Scarcely any business has been passing in the railway share market, and prices in nearly every instance were quoted the same as at 4 o'clock yesterday. Lombardo-Venetian railway shares were firmer. Grand Trunk of Canada stock was rather dull. Foreign lines generally were very quiet.

The Economist's Railway and Mining Share List.

THE HIGHEST PRICES OF THE DAY ARE GIVEN.

FIRST-CLASS PROTESTANT EDUCATION, at the Royal Continental Collegiate Institution, Bushey heath, Herts.—In addition to all its qualities as a first-rate classical and commercial school, it is also highly recommended for a thorough French education. Some of the parents who are continually visiting France, and whose sons have scarcely been two years at this school, are most happy to assure those parents who are desirous that their children should acquire a thorough knowledge of the French language, without wishing them to neglect their English and classical education, that their sons speak far better and more grammatically than any of the sons of their friends who have spent two or three years in schools in France merely for the purpose of acquiring that language. Terms inclusive, and vary, according to age and requirements, from £40, £50, to £60 per annum—list, four terms, each of 75 days' duration, with two months' holidays. Pupils are received any day, their term beginning from the day of their arrival. No restrictions to parents. Not one case of illness has occurred since the school has been established (1857).—Address, stating age and requirements, Professor Vellère (late of the Harrow Preparatory School), Bushey heath, Herts. The pupils wear a uniform very elegant and becoming.

AT HAMBLY HOUSE ACADEMY, Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.
By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.
London: J. Churchill, and to be had of all booksellers

JULLIEN FUND.

Committee Room—50 New Bond street.

The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.

The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitche | Mr W. Duncan Davison
Mr W. R. Sams | Mr Jules Benedict
Mr Thomas Chappell | Mr A. Blumenthal

HONORARY TREASURERS.

Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street

BANKERS.

Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Havover square

Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.

April, 25th, 1860.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

A TOILETTE REQUISITE FOR THE SUMMER.

—Among the many luxuries of the present aze, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

HOLLOWAY'S PILLS AND OINTMENT.

—Health to the Sick.—Purifying and renovating properties of a remarkable kind are the characteristics of these inestimable vegetable remedies. The poor sufferer, well nigh worn out by lengthened disease, may still be strengthened and restored by the tonic influence of these medicaments. In dyspepsia, loss of appetite, flatulence, and liver complaints, while the Pills are taken, the Ointment should be rubbed over the digestive organs. In heart and chest complaints it should be rubbed on the back and chest as assiduously as salt is rubbed into meat. By steady perseverance with this treatment, the blood is purged of all impurities, and the whole animal system thoroughly regulated. These excellent remedies, in most cases, restore the sick to health.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE

of PREMATURE DECLINE, with Plain Directions for Perfect Restoration; to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

Mr CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by Mr CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12, and 6 till 8. Sundays from 10 till 1.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS

on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of all booksellers.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS

is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer,

Mr WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c.,

for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER 228 Piccadilly, London

THE BEST REMEDY FOR INDIGESTION.

NORTON'S CAMOMILE PILLS

are confidently recommended as a simple but certain remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." NORTON'S PILLS act as a powerful tonic and general aperient; are mild in their operation; safe under any circumstances; and thousands of persons can now bear testimony to the benefits to be derived from their use.—Sold in Bottles at 1s 1½d, 2s 9d, and 11s each, in every town in the kingdom.

CAUTION!—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the various imitations

---

NO MORE MEDICINE.—

For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and Incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulancy, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, flaking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hemorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most infeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn Norfolk.——Cure No 53,816.—Field Marshal the Duke of Plaskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. 181 Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

DINN EFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

Allotment of Shares of this Company will take place at next meeting of Directors, on Thursday, 26th inst. Application for shares to be sent to London Joint Stock Bank, or to Mr Arthur Clarke, Secretary, 10 Coleman street, E.C., on or before Monday, 23rd inst., after which no application will be received.

MADRAS RAILWAY COMPANY.

—The Directors are prepared to receive Applications for Loans on Debentures for four or five years, from the 1st July, 1860, at 5 per cent. per annum, payment of the principal and interest being guaranteed by the Secretary of State for India in Council.

Particulars and forms of application may be obtained at the offices of the Company.

JAMES WALKER, Managing Director.

No. 33 New Broad street, London, E.C., June 22, 1860.

THE BOARD OF DIRECTORS

of the EAST INDIAN RAILWAY COMPANY are prepared to receive Tenders for 10 MILES of GREAVES' PATENT SLEEPERS, as per specification and drawing now lying at these offices for inspection. Tenders must be delivered to the undersigned in sealed envelopes, marked "Tender for Sleepers," on or before 12 o'clock at noon, on Tuesday, the 24th July instant.

The Company is not bound to accept the lowest or any tender.—By order of the Board.

D. L. NOAD, Secretary.

East Indian Railway House, 9th July, 1860.

GREAT INDIAN PENINSULA

RAILWAY COMPANY.—The Directors are prepared to receive LOANS on DEBENTURES of £100 and upwards, for five or seven years, from the 1st July inst., at 5 per cent. per annum interest, payment of both principal and interest being guaranteed by the Secretary of State for India in Council, and the interest being payable Half-yearly, on the 10th January and 10th July, at the London and County Bank, Lombard street, London, by means of Coupons attached to the Debentures. Forms of proposal may be obtained on application at this office. THOS. R. WATT, Secretary.

Company's offices, 3 New Broad street, London, E.C., 13th July, 1860.

INVERNESS AND ABERDEEN JUNCTION RAILWAY.

ISSUE OF NEW SHARES.

The Inverness and Aberdeen Junction Railway Company having, under the powers of "The Inverness and Aberdeen Junction Railway Act, 1860," resolved upon issuing further Capital to the extent of £100,000, in shares of £10 each, bearing a Preference Dividend, payable Half-yearly, at the rate of 4½ per cent. per annum, the Directors are now prepared to receive applications from the public for portions of the same.

These shares represent the only stock in the Company having any preference, and the dividend on them will be paid before any dividend is paid upon the existing or ordinary shares of the Company, the whole being amply secured by a surplus income.

Applications may be made for one or more shares to the Secretary, at Inverness, or through a Broker or Agent.—By order of the Board,

AND. DOUGALL, Secretary.

Company's office, Inverness, 30th April, 1860.

CRANE MINE, CAMBORNE,

Cornwall.

On the Cost-book Principle.

In 1,024 shares; Term, 21 years; Dues, 1-15th.

Upwards of 500 shares are applied for by mining men in the district. No premium.

The sett is large and is traversed by seven large lodes, including the lodes of North Roskear, South Roskear, Wheal Seton, West Wheal Seton, and the rich counter lode of Stray Park and Dolcoath; and has the Ivan courses which make the ore in those celebrated mines.

The subjoined statement of the cost, dividends, and present value of mines on the same lodes stamps the mine value of the Crane Mine:—

	Cost.	Dividends.	Present value.
	£	£	£
Dolcoath	5,000	 500,000	 179,000
Wheal Seton...	21,186	 60,145	 21,700
West Seton ...	5,460	 94,400	 128,000
East Crofty ...	11,750	 78,960	..... unknown.
North Roskear.	11,200	 109,900	 22,500

The Dolcoath and Stray Park counter passes through Crane Mine.

Prospectuses will be forwarded on applications to the Secretary, 146 Gresham House, London, E.C.

CRANE MINE, CAMBORNE,

—Notice.—No Applications for Shares will be received after Friday, the 20th instant.

J. ELLIOT SQUARE, Secretary.

146 Gresham House, London.

CEYLON RAILWAY COMPANY.—

Notice is hereby given, that an Extraordinary General Meeting of the shareholders in the Ceylon Railway Company will be held at the offices of the Company, 9 Broad street buildings, London, on Monday, the 23rd day of July inst., at One o'clock in the afternoon precisely, for the purpose of considering a tender for the construction of the Railway, and a report from Mr Hawkshaw, C.E., to the Duke of Newcastle, and a correspondence between his Grace and the Directors thereon, and passing resolutions thereon, and generally for the purpose of passing such resolutions as the meeting shall think expedient in relation to the construction of the Railway by contractors or otherwise, or to the contracts passing between the Ceylon Government and the Company, or to any proposal affecting the same, and giving instructions and powers to the Directors in relation to the matters aforesaid, and for the purpose of completing the unfinished business of the meeting originally convened for the 30th day of April last, and held by adjournment on the 31st day of May last. The Transfer Books will be closed from the 16th July inclusive until immediately after the meeting.—By order of the Board, G. E. COOPER, Secretary.

9 Broad street, Buildings, London, July 6, 1860.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

HEAD OFFICE—No. 9 ST ANDREW SQUARE, EDINBURGH.

ESTABLISHED 1815.

This Society is constituted on purely Mutual principles. The Members (Policy-holders) alone form the Society, there being no Proprietary Body (Shareholders) controlling its affairs and participating in the Profits arising from the Contributions of the Members. The whole funds belong to the Assured, and the profits are divided among them alone.

These principles have found very extensive acceptance in the past operations of this Society, having been applied in such a way as to afford the amplest returns to the members, while, at the same time, careful regard has been had to the establishment and preservation of that unquestionable security, which is essential in the business of Life Assurance.

The Realised and Invested Funds at 31st December last Amounted to

THREE MILLIONS FIVE HUNDRED and EIGHTEEN THOUSAND TWO HUNDRED and THIRTY POUNDS,

which exceeded the whole Liabilities, and yielded a Surplus Fund of

NINE HUNDRED and NINETY-TWO THOUSAND SIX HUNDRED and THREE POUNDS,

out of which there was reserved as a Guarantee Fund

THREE HUNDRED and THIRTY THOUSAND EIGHT HUNDRED and SIXTY-EIGHT POUNDS,

and the remainder of this Surplus Fund

(Less an unappropriated Balance of £11,860), amounting to

SIX HUNDRED and FORTY-NINE THOUSAND EIGHT HUNDRED and SIXTY-SEVEN POUNDS,

being divided among the Members according their respective rights, yielded a

BONUS of from £1 12s 6d to £3 6s per cent. per annum on the original sums assured,

besides providing a prospective Bonus upon an increased ratio for such policies as shall become claims prior to next division of Profits, all which taken together are equivalent to

AN AVERAGE BONUS of £2 5s 8d per cent. per annum, one of the largest Bonuses ever declared by any office.

Viewing the Policies of the SCOTTISH WIDOWS' FUND simply as Investments for Money, a Table, attached to the Report read at the Annual General Meeting of Members held on 25th May, 1860, shows the lowest Bonus declared (on Policies newly opened) to be 58½ per cent., and the highest Bonus (on the oldest Policies) to be 111 per cent. of the Premiums paid. Thus, in the latter case, more than the whole premiums paid have been added in bonuses, the interest alone has been more than sufficient to provide the original sum assured.

For example:—

	£	s	d
A. B., aged 33, opened a Policy in 1819, for.....	1,000	0	0
There has been added as bonuses	1,262	1	5
Present amount of Policy	2,262	1	5
Deduct from this amount the Principal of the whole Premiums paid.....	1,136	0	7
The difference shows the Amount of Insurance purchased by the Interest alone.....	1,126	0	10

Being an improvement of Money which may challenge comparison with many other modes of investing sums of small amount, the advantage of an assured sum in the event of death at any time after the commencement of the Policy being also secured.

The Substantial Benefits accruing under the Society's System are not confined to a favoured class of Policies, but are proportionally distributed among the whole body of Assured Members.

New Entrants may safely rely on the continuance of a Scale of Bonus as ample as that which has hitherto prevailed, because, irrespective of a permanent guarantee fund, the margin of Profit in the Premiums payable, which forms the main index of any Life Assurance Society's Bonus-giving power for the future, remains wholly untouched in the additions hitherto declared.

The magnitude and select character of the Business,—the very small average of Expenses of Management,—the favourable rate of mortality and interest,—and all the other elements productive of Surplus, are therefore combined in the position and prospects of the Society, and afford inducements and guarantees to intending Assurers of the most satisfactory kind.

The Directors, in terms of the Constitution and Bye-Laws, afford to Members every facility and privilege consistent with due regard to the general interest of the Society.—In particular—

(1.) Declared Bonuses may be surrendered for present cash, or applied in reduction of future Premiums, the right to share in subsequent Divisions on the Sums remaining Assured not being thereby lost.

(2.) Surrender Value is allowed upon every discontinued Policy, although no more than One Premium has been paid.

(3.) When Policies attain the value of £50, Loans are made to Members without expense, and at a medium rate of interest, as upon first-class securities.

(4.) Members are permitted to Travel and Reside in any part of the World, either without charge, or subject to moderate extra rates of Premium suitable to the risk.

(5.) In the Settlement of Claims, the wishes and convenience of parties are carefully attended to, and the full sums due are made payable without charge in any part of the Kingdom.

(6.) Members are allowed, without any Extra Charge, to serve in Volunteer Rifle and Artillery Corps, within the United Kingdom.

Reports, Prospectuses, Forms of Proposal, and all information, will be promptly supplied from the Head office and Agencies.

June, 1860. SAMUEL RALEIGH, Manager.

James Harris, 38 St George's square, Belgrave road, Pimlico.
Henton Seeley, Islington green, Agent for Islington District.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

ENGRAVING AND PRINTING.

HENRY BRADBURY AND CO.,

BANK-NOTE MANUFACTURERS,

FOREIGN, ENGLISH, AND COLONIAL;

Designers, Engravers, and Printers of Bonds, Coupons, Bills of Exchange Cheques, Certificates, Drafts, Shares, &c.

MERCHANTS and BANKERS are respectfully informed by HENRY BRADBURY (late of Whitefriars), that the Business of BANK-NOTE ENGRAVING and PRINTING, which, under his personal direction, has hitherto been carried on by Messrs BRADBURY and EVANS, is now conducted by a separate Firm under the title of HENRY BRADBURY and CO.

"TIMES' City Article, January 28, 1860:—"A Series of Specimens of Bank-Note Engraving of a very remarkable character has just been issued by Mr Henry Bradbury, who has spent some years in perfecting that art. Apart from their beauty of design and finish, they present the essential advantage of being producible only by machinery so costly and so complex as to prevent all chance of successful forgery."

*** The above Specimens may be had upon application.

OFFICES: 12 and 13 FETTER LANE, FLEET STREET, E. C. (Facing Her Majesty's Record Office.)

MERSEY DOCK ESTATE.—LOANS OF MONEY.

The Mersey Docks and Harbour Board hereby give notice, that they are willing to receive LOANS of money, on security of their bonds, at the rate of £4 5s per centum per annum interest, for terms of three, five, or seven years, at the option of the lenders. The Board will accept loans for a longer period than seven years, on such terms as may be agreed upon.

Interest warrants for the whole term, payable half-yearly at the bankers' of the Board in Liverpool, or their correspondents in London, are issued with each bond.

All offers to be addressed to George J. Jefferson, Esq., Treasurer, Dock office, Liverpool.—By order of the Board, DANIEL MASON, Secretary.

Dock office, Liverpool, May 10, 1860.

NOTICE TO BONDHOLDERS.—IMPERIAL TURKISH £6 PER CENT. LOAN. 1854.

Issue of £3,000,000 sterling, negotiated by the late Baron de Goldsmid and John Horsley Palmer, Esq.

Notice is hereby given, that by the tenor of the General Bond for the above Loan, a sum equal to £1 per cent. on the amount of the Loan negotiated, together with a sum equal to one year's interest on so much of the said Loan as shall have been redeemed, shall be employed annually on the 10th of October in each year, commencing with the year 1856, in redeeming the Loan at par.

The Ambassador of the Sublime Porte at London, and Thomas Dent, Esq., one of the partners of the firm of Messrs Dent, Palmer, and Company, the present agents of the Loan, in the presence of Mr William Wood Venn, Notary Public, have therefore, in compliance with the stipulations of the General Bond, this day drawn by lot, with the usual formalities, the following numbers of Bonds of this loan, amounting to £37,900 sterling, or 947,500 francs:—

Number of the Bonds drawn as above stated.

LETTER A.—13 Bonds, Nos.

42 62 110 226 250 709 748
786 844 902 915 919 969

	£	Francs.
For £1,000 sterling each	13,000	or 325,000

LETTER B.—24 Bonds, Nos.

6384 6515 6567 6576 6623 6701 6814
6841

For £100 sterling each	11,300	or 282,500

LETTER D.—32 Bonds, Nos.

51 94 318 581 601 629 688
723 731 762 799 813 968 970
1001 1032 1037 1102 1157 1269 1299
1307 1360 1477 1557 1588 1768 1785
1871 1894 1940 1949

For £50 sterling each	1,600	or 40,000

182 Bonds amounting together to the sum of | 37,900 | or 947,500

Which Bonds are to be paid off at par, on the 10th of October next, when the interest thereon will cease. Holders thereof are therefore requested to present the Bonds bearing the above numbers for payment at par on that day, either to Messrs Dent, Palmer, and Co., at No. 11 King's Arms yard, Moorgate street, London, or to Messrs Bischoffsheim, Goldschmidt, and Company, Rue de la Chaussée d'Antin, Paris, who will be authorised to pay the same, with the interest then due.

London, 13th July, 1860.

(Signed) C. MUSURUS.

WITNESS—William W. Venn, Notary Public.

N.B.—The General Bond also provides that if the Bonds are not presented for payment within 12 months from the day fixed for their redemption, the same shall only be paid on the written order of the Representative of the Sublime Porte at London or Paris.

ENGLISH, SCOTTISH, AND AUSTRALIAN CHARTERED BANK.

Capital paid up, 500,000*l.*

LETTERS OF CREDIT ON THE BRANCHES are GRANTED on the most favourable terms. Bills on the Australian Colonies negotiated and sent for collection.—By order of the Court,

73 Cornhill, E.C. HENRY MOULES, Secretary.

SOUTH AUSTRALIAN BANKING COMPANY.

—Incorporated by Royal Charter, 1847.—Letters of Credit and Bills issued upon Adelaide, Port Adelaide, Gawler, and Robe Town. Approved Drafts negotiated and sent for collection. Every description of Banking business conducted direct with Victoria and New South Wales, through the Company's Agents. Coupons on Australian Government Bonds discounted —Apply at 54 Old Broad street, London, E.C.

WILLIAM PURDY, Manager.

CHARTERED MERCANTILE BANK of INDIA, LONDON, and CHINA.

HEAD OFFICE, 62 Threadneedle street.

Agencies and Branches at Bombay, Calcutta, Madras, Colombo, Singapore, Penang, Hong Kong, Shanghai, and Mauritius.

The Bank, at its Head office in London, grants Drafts on its various Agencies and Branches; issues Letters of Credit; purchases approved Bills on India, China, Ceylon, and Mauritius; undertakes the purchase and sale of Indian Government and other Securities, and the collection of Private and Mercantile Bills, at the ports and places at which its Agencies are established; receives Deposits at Interest for Fixed Periods, the terms of which may be ascertained on application; and transacts generally all Indian Banking business, including the receipt of Pay, Pensions, and Dividends on Stock of all kinds.

ORIENTAL BANK CORPORATION.

Incorporated by Royal Charter, 30th Aug., 1851.

Paid-up capital, £1,260,000; reserved fund, £252,000.

The Corporation grant Drafts, and negotiate or collect Bills payable at Bombay, Calcutta, Madras, Ceylon, Hongkong, Singapore, Mauritius, Melbourne, Sydney, Auckland, and Wellington, on terms which may be ascertained at their office. They also issue Circular Notes and Letters of Credit for the use of Travellers by the Overland Route. They undertake the agency of parties connected with India, the purchase and sale of Indian Securities, the safe custody of Indian Government Paper, the receipt of Interest, Dividends, Pay, Pensions, &c., and the effecting of remittances between the above-named dependencies.

They also receive deposits of £100 and upwards, repayable on a notice of 10 days, and allow interest thereon at 1 per cent. below the Bank of England minimum rate of discount, rising and falling therewith. Deposits subject to longer notices of repayment bear higher rates which may be ascertained at their office.

Office hours 10 to 3. Saturdays, 10 to 2.

Threadneedle street, London, March 23, 1860.

THE AGRA AND UNITED SERVICE BANK (LIMITED)

is established in India 1833. Incorporated by Letters Patent 1857. Paid-up capital £1,000,000 sterling. Reserve fund £100,000. Branches at Calcutta, Bombay, Madras, Agra, Lahore, Hongkong, and Shanghai.

Head Office—27 Cannon street, London, E.C.

Current or floating accounts opened with Individuals and Firms bearing interest, when the minimum monthly balance at credit is not less than £100, at the rate of two per cent. per annum.

Deposits for Fixed Periods are received at Interest, particulars of which may be obtained at the Bank.

Bills issued at the Exchange of the day, and free of any extra charge, on the Branches of the Bank.

Approved Bills drawn against Funds, or upon Parties in India, purchased.

Bills payable in India sent out for collection.

Circular Notes, payable at the principal Cities of Europe, granted.

Interest on Indian Government Securities drawn, and the equivalent paid to parties interested, without charge.—By order of the Board,

WILLIAM SHIPMAN, Officiating General Manager

Hours of business, 10 to 4; Saturdays, 10 to 3.

BANK OF NEW SOUTH WALES.

—The Nineteenth Half-yearly Meeting of the shareholders of this Bank was held at the Banking house in Sydney, on Wednesday, the 25th day of April last; Sir Daniel Cooper in the chair. The following report was read and unanimously adopted:—

The Directors have now to lay before the proprietors the annexed statement of the affairs of this bank for the half-year ended the 31st ultimo:—

	£	s	d
The undivided balance of Sept. 30 was	5,287	0	1
To which are to be added the profits, after deducting rebate on current bills, allowing interest on deposits, paying all expenses of management, and providing for bad and doubtful debts	45,246	3	11
Leaving for distribution	50,533	4	0
Which the Directors recommend to be applied as follows:—			
To payment of dividend on capital paid up to date, at the rate of 15 per cent. per annum	£47,256	0	
To balance carried to present half-year	3,277	4	
	50,533	4	0

During the past half-year the state of commercial matters in this and the neighbouring colonies has been such as to lead to considerable losses, but your Directors have pleasure in stating that they have been enabled to make full provision for these without entrenching on the reserve fund, although they are unable to recommend any addition to that fund from the profits of the half-year.

Some of the proprietors having been absent from the colony at the time of the allotment of the new shares, on the 27th October last, without having left sufficient authority to their agents to accept the shares to which they would have been entitled, the moiety of shares upon which payment should have then been made were necessarily forfeited. These gentlemen have since requested the Board to allow them now to accept and pay up in full the whole of such shares. The Directors recommend the admission of these claims, such shares to be entitled to dividend from the date of payment only.

The Directors have to report that they have recently secured a valuable allotment of land in the Southern part of the City, where a Sub-branch will be opened in the ensuing month; also, that on authentic intelligence having been received of the existence of a gold-field on the Snowy River, an agency of the bank was at once opened there; from both these sources the Directors anticipate considerable benefit to the bank, and recommend that authority to open such branches and agencies as may be deemed desirable for the interests of the bank be continued to them.

The Directors have to remind the proprietors that the remainder of the new shares allotted on the 27th October last falls due to-morrow, and that shares not taken up will be forfeited.

The dividend will be paid at the Head office, to-morrow, and at the branches on receipt of advice.—For and on behalf of the Board of Directors,

DANIEL COOPER, President.

AGGREGATE BALANCE SHEET OF THE BANK OF NEW SOUTH WALES, MARCH 31, 1860.

(Including London Branch, to 31st December, 1859.)

Cr.	£	s	d

THE SUPPLEMENTARY BUDGET.

AFTER many delays, and perhaps some changes of intention, we have at length the Supplementary Budget. As the sum to be obtained was, for a Chancellor of the Exchequer, not large, the present scheme is a simple one. The substantial features are two only.

Mr Gladstone has proposed to raise the spirit duties by 1s 11d a gallon, so as to make British spirits liable to a duty of 10s, Colonial spirits to a duty of 10s 2d, and foreign spirits to a duty of 10s 5d. He has done so on the express ground that alcoholic spirit is an article on which we should endeavour to obtain the *maximum* of possible revenue, and that so far from regarding any consequent diminution of consumption as an evil, we ought on the contrary to consider it as a benefit. Perhaps this is a somewhat stern dictum; nevertheless, there can be no substantial objection to it. If it be admitted, the only question that remains is,—Will Mr Gladstone get his money?

The annual sum which he expects to gain is—

	£
By the Excise duty on home-made spirit	1,000,000
Customs	400,000
	1,400,000

If we looked only at the most patent part of the subject, we should expect the Excise duty not only to yield the sum here estimated, but to yield much more. The amount of home-made spirit consumed in the year 1858, the last for which the returns are as yet complete, was—

	Gallons.
England	12,149,083
Scotland	5,301,056
Ireland	5,636,912
	23,087,056

which, at 10s a gallon, would give 11,543,528; the duty derived from spirits at present is on an average of years about 9,250,000*l*, which would seem to show that the increase of duty proposed by Mr Gladstone would give 2,293,000*l*. But it would be very sanguine to suppose that so great an increase of revenue would result from this augmentation of duty. We should not, indeed, lay so much stress on the effect of the treaty with France as Mr Gladstone does. We question whether the competition of wine, especially where wine is admitted at a duty to be regulated by an alcoholic test, will much affect the consumption of spirit. The difficulty is a more general one. Both illicit distillation and dilution are much stimulated by an increase of duty; and these two disturbing influences may have considerable effect when combined with the diminution of consumption naturally consequent on an increase of duty. They had an extreme effect on the last occasion when the spirit duties were altered. In 1858 Mr Disraeli raised the duty on *Irish* spirits from 6s 2d to 8s. He estimated that he should get 500,000*l* by the operation; he only got 188,625*l*,—partly of course in consequence of diminished consumption, but partly also, it is to be feared, in consequence of an increase in the illegal manufacture. The average quantity of duty-paying spirit made in Ireland

	Gallons.
Was, for the three years before the change	6,723,514
It was in the first year after the change	5,655,500
Falling off	1,068,014

or more than 15 per cent.

This change was one of about the same amount as the present, and the effect of illicit competition may be expected to augment with each augmentation of duty. But, on the other hand, the change was confined to Ireland, and Ireland is the part of the Empire where illegal distillation has always prevailed more than elsewhere. Mr Gladstone has estimated a reduction of 10 per cent. in the amount paying duty throughout the three kingdoms, and this seems to be sufficient.

We may observe that the tax now imposed, which Mr Gladstone tells us is to be permanent in its character, should calm the fears of those who have been led to think that Mr Gladstone has irreparably impaired that part of the permanent revenue of the country which is derived from indirect taxation. If the paper duty is retained, the account of the year will stand:—

	£	£
Indirect taxes repealed by original Budget at once	2,931,000	
Ditto, prospectively	700,000	
		3,631,000
Indirect taxes imposed by first Budget, allowing for 180,000*l* which have been abandoned	802,000	
Ditto second	1,400,000	
		2,202,000
Difference between amounts repealed and imposed		1,429,000

so that the whole effect of the year's operations will be about an additional 1¼d of the income tax.

The second proposal of Mr Gladstone's second Budget is to spend 1,286,000*l* of the balances in the Exchequer. There are at present 6,594,000*l*, which is a large sum. The following table shows what the balances have been at the end of each of the years mentioned:—

Years.	Amount. £
1853	4,485,230
1854	6,015,613
1855	3,688,600
1856	6,942,428
1857	6,879,659
1858	7,755,455
1859	5,380,228

These figures show that the present balances, though by no means extravagant, are somewhat large. But still it is unfortunate that in 1860, which has so long been looked forward to as an epoch of financial plenty, two species of national capital,—the credits on malt and hops and the balances, amounting together to 1,686,000*l*,—should be spent on the services of the year, and that we may probably have to renew the 1,000,000*l* of Exchequer Bonds falling due in November next. It is disheartening to have so evident a

dearth just when we expected so great a surplus. But the exigencies of the national expenditure have thrown on us an additional burden which the falling in of the annuities is not enough to counterbalance.

The effect of spending 1,286,000*l* of the balances in the Exchequer upon the money market will be much the same as if the money had been in any other way obtained by the Government from the capital of the country. But in the present state of Lombard street it is worth while to observe that it is unfavourable to the power of the Bank of England. It tends to lessen the public deposits over which the Bank has special control; whereas, if the money had been raised by loans, it would have been drawn from sources over which the Bank has no peculiar control,—from the funds of capitalists that *may* be kept at the Bank, but are equally likely to be kept elsewhere.

NATIONAL DEFENCES.

THE REAL DANGER AND THE REAL REMEDY.

We must be very cautious that we do not spend money idly on our National Defences. We say so not only for the sake of our money, but also for the sake of our security. The public mind is at present anxious, we believe justly anxious, as respects foreign affairs; we are ready to do not only what is necessary, but something more; we very much wish to be safe, and we are not offended at proposals "of abundant "caution." But on such subjects the public feeling changes rapidly. We are now in a hot fit; we may soon be in a cold fit. We must be very careful not to do anything in our eagerness which may seem absurd when the inevitable reaction comes. We must remember that every item of folly and overcaution which we indulge in now will then be magnified excessively—that it will then, perhaps, be tortured into a reason for not doing what is in the strictest sense necessary.

The first question which we should distinctly answer is the simple one—What is our danger? *We* at least have no difficulty in saying what is *not* our danger. We have no belief in the feasibility of a decisive *coup de main* on the English shores by France or by any other Power. There is a lurking fancy even among sensible persons that Louis Napoleon may in a short time—say in 48 hours—land a large force in England, without any warning and in the midst of peace; that he may take London, and may dictate a shameful peace to us. Many people who do not much consider the matter have before them the dread of a decisive and sudden descent. But it should seem that such a dread is entirely unreasonable. There is no instance of such a descent in the whole history of the world; and there is nothing in the recent changes in the art of war to make us suppose that the future, in this respect, will differ from the past. It is true that railways and steamers facilitate attack; but they likewise facilitate defence. They are particularly favourable to the military efficiency of a population which is usually pacific. Our most recent history shows this. In the last war our militia was a very effective body,—as effective, probably, as any similar body can be expected to be. But it was a purely *local* body. The difficulties of travelling at that time of necessity made it so. The militia of Lancashire was not available for the defence of Sussex, nor that of Cornwall for the protection of the capital. But this is now changed. For the first time in the history of the world, a military force, composed of persons who are *to-day* pursuing their ordinary peaceful calling, can be to-*morrow* made available for the defence of their country *wherever* it may be attacked. The volunteers of Manchester could be conveyed in a night to the South of London, and could encamp there side by side with a *corps* from Bristol. We do not believe that any invader in his senses would risk an unsupported attack—a "hurried dash" at a country so defended. And until our fleet was vanquished, any attack on our shores must be unsupported. A numerous army might, it is probable, be landed here: but so long as the sea was ours, it would be deprived of communication with its own country, would have no basis of operations, no means of obtaining supplies, no resource but an enemy's country for food, no resource but an enemy's country for ammunition. As we have shown, it would be exposed to the attack of a body that would be drawn from the whole island, and would outnumber it in a very few hours. We do not believe any sane general would risk an attack on London, so long as the English Channel was held by English ships.

The real danger to be provided against is some possible calamity to our fleet. We may believe that the English sailors are as good as they ever were; that the English ships are as well built, and will be as well handled; that our fleet is as superior to others as it ever was. We by no means say that this is so, but for the sake of argument we may admit it to be so, for even this would not be sufficient. A naval action must always be a matter of chance; an incompetent commander, or an adverse accident, may cause the best fleet, as well as the best army, to be defeated by one which is altogether inferior to it. However superior our fleet may be, the battle with an adversary may be a drawn one, may be rather more of a defeat than a victory. The artillery of modern war would in such cases be fearfully efficacious. The injury done to a fleet by a naval battle would now be incalculably greater than any injury that could formerly have happened to it in such circumstances. The art of injury has improved. Our present guns would shatter and disable many ships which no artillery ever before used could have shattered. For ten days after even a drawn battle, much more after a defeat, the Channel may be at the disposal of the enemy.

What would be his course during these ten days? His best course would be an obvious one. He would attempt *permanently* to cripple our fleet. He would endeavour to keep the advantage which he had gained; as he was in full possession of the Channel, he would be able to maintain himself there; he would prevent our fleet from recovering from its disadvantageous position. And at present we fear he might do this. Our great arsenals of naval stores are all on the sea-coast; they are exposed, as everything on the sea-coast must be, to an attack by sea; their defences are inefficient. Their situation was not even selected for the purposes of defences. A worse place than Plymouth for defensive purposes could not it would seem have easily been found. These stations, though now used as arsenals, were at first selected for their nautical advantages as ports, and not for their merits as defensible stations. We know that now; and we fear that hereafter the immense establishments which we maintain at the water's edge might be exposed to sudden attack, and not improbably to sudden ruin. And their contents are in the strictest sense necessary to us. Without the stores of material—the elaborate machinery—which we now have at these ports, and which we now have nowhere else, the rapid repair of our fleet would become impossible, and on the rapid repair of our fleet almost everything must depend. If we were *long* inferior to an enemy in the Channel seas, London itself would be in danger.

The first remedy, as we recently showed at length, is to do all we can, not on the sea-shore, which is exposed, but at convenient inland spots which are not exposed. We are sure a competent investigation would show that an immense portion of the naval preparations now made on the sea-side might more safely, and nearly as conveniently, be made elsewhere; and it is evident that our stores of material may be kept anywhere, and it seems very imprudent to keep them just where an enemy could most easily destroy them.

The second remedy is to make reasonably secure the mere dockyards in which our fleets are to be repaired. The dockyards selected should be in naturally defensible situations; and, as they would not cover an enormous extent of ground, the fortifications necessary to protect them need not be of stupendous magnitude, or involve an incalculable outlay.

We must be careful not to spend money on attempting to make places defensible which are indefensible. It is quite possible that some of our present dockyards, having been selected from any other motives than those of defence, are not in situations that are practically defensible. Nor is there any use in spending a small sum on places which can only be made defensible by a large sum; we must count the cost, and see whether we are willing to make the place defensible or not. If we are not willing, we should let it alone; and if we are, we should make its defences complete.

Thirdly, we should make no one dockyard essential to our safety. We should maintain several in a fairly defensible state, and we should be ready to supply them at any moment

with all they require for repairing a fleet from secure depôts within the country.

THE BREACH BETWEEN GARIBALDI AND THE ANNEXATIONIST PARTY.

The great success of Garibaldi in Sicily, the recent desertion of the Neapolitan corvette the Veloce to his side, the paralysis of terror into which the Neapolitan commander at Messina has been plunged by the hostile activity of the Veloce, the general disaffection in the Neapolitan fleet which has shown itself in the refusal of the sailors and officers of the navy to sail against Garibaldi,—all these great steps towards the final success of the Italian cause may be neutralised and made of none effect, if the various partisans of Italian freedom cannot earnestly unite. That the Sicilians are nearly useless as soldiers even in Sicily, and would be quite useless as allies to Garibaldi out of Sicily, seems now to be a fact only too well established. If, therefore, the Piedmontese Government be either by its own fault or that of Garibaldi so far alienated as to disown, discourage, or even it may be prohibit the departure of the Italian volunteers who are so eager to aid Garibaldi's enterprise, he may find himself when he lands on the continent of Naples dependent almost entirely on the uncertain aid of the people of the country and of such troops as may be persuaded to desert to him, and even thwarted instead of encouraged by Piedmont. It is obvious enough that such a breach would be most disastrous for the Italian cause, and in all probability would entail absolute ruin. Yet of such a breach there is, unfortunately, already the commencement.

La Farina was one of the most conspicuous among the Sicilian revolutionists in 1848. He is said by those who know him well to be a man of energy, talent, and very great ambition. After the failure of the Sicilian revolution he went to Sardinia, and there busied himself in literary undertakings of no great importance. He is the author of a voluminous History of Italy, and in other ways has showed considerable energy and perseverance, though not genius. At last he attached himself to Count Cavour, entirely adopted his policy and echoed his convictions. When Garibaldi's expedition to Sicily was first talked of, no one wrote of the scheme with more contempt or spoke of it with more ridicule than La Farina. He did all in his power to discourage it, and to the last prophesied its immediate and total failure. When, however, Palermo was in the hands of Garibaldi, then and not till then he followed him to Sicily, and expected to take as prominent a part there as he had taken in 1848. He was at first received, as he himself admits, most courteously by Garibaldi. But he is said to have given out that he had in his pocket a commission from the King of Piedmont to assume command of the island in his name directly the annexation should be voted. At all events he rallied round him a party bent on immediate annexation, and especially opposed to the Ministry of Crispi.

Crispi had exactly those claims on Garibaldi which La Farina wanted. For a long time an exile in London, he devoted himself exclusively to the Sicilian cause. In the spring of 1859 he went under a Wallachian name and character to Sicily at the greatest personal risk, visited every great town there, gathered up and once more brought into communication all the various threads of the liberal cause, and planned an insurrection for the month of October. The events of the autumn rendered it needful to postpone the insurrection, first till November, then till the present year, and in the meantime Crispi solicited the aid of Garibaldi. Garibaldi replied that he would do nothing to excite an insurrection; but if it once broke out and gave evidence of a unanimous feeling in the island, he would perhaps lend it some aid. At last the insurrection came. Crispi, with his wife (the only woman of the expedition), accompanied Garibaldi, and he fought desperately in every action, — his wife superintending the attendance on the sick and wounded. When they were at last masters of Palermo, it was natural that Garibaldi should place confidence in the man who had hazarded more than any other (except himself) in the cause. Though certainly less clever than La Farina, Crispi's disinterestedness had stood the severest trial, and his views for the future accorded much more with Garibaldi's than did those of the Piedmontese party. La Farina, in his eagerness for immediate annexation, was willing, like almost all Sicilians, to sacrifice Italian unity and Neapolitan freedom entirely to the security of Sicily. Garibaldi's dictatorial power once at an end, the invasion of Naples could only have been accomplished by a declaration of war on the part of Piedmont, which France, as we all know, would not have permitted. Yet for the immediate annexation La Farina was scheming so actively that he obliged Garibaldi to dismiss Crispi and to form a new Ministry. This the Dictator did under protest, retaining Crispi as a personal councillor and friend; but apparently he soon found that this step would not be enough. The selfish desire of the Sicilians for immediate and separate annexation was skilfully worked upon by La Farina, until at last Garibaldi found that, without decisive action against the annexationist party, he should be fettered in all his plans.

The official statement of the Dictator's reasons for summarily arresting La Farina and dismissing him from Sicily is not very full, but it unequivocally represents the feelings we have described. It runs thus:—

On Saturday, the 7th inst., by special order of the Dictator, were banished from our island, Signors Giuseppe La Farina, Giacomo Griscelli, and Pasquale Totti. Signors Griscelli and Totti, Corsicans by birth, are of those who have contrived to connect themselves with all the police authorities of the Continent. The three expelled persons were in Palermo conspiring against the actual order of things. The Government, which is vigilant for the public tranquillity, and should not be the least disturbed, could not any longer tolerate the presence amongst us of such individuals, who had come here with culpable intentions.

The retort of La Farina is much more detailed. He accuses Garibaldi of seeking allies everywhere but with the moderate Piedmontese party,—of trusting at one and the same time renegade Bourbonists and followers of Mazzini, alike unpopular in Sicily. He says:—

I believed, and still believe, that the only salvation for Sicily is immediate annexation to the constitutional kingdom of Victor Emmanuel, the most ardent wish of all the Sicilians, already manifested by the chiefs of more than 300 municipal bodies. General Garibaldi believed, and perhaps still believes, that the annexation should be postponed till the liberation of all Italy, including Venetia and Rome, has been effected. I believed, and still believe, that it was a great act of imprudence to confide a share of authority and of the public forces to ministers like Crispi, unpopular (I do not know whether rightly or wrongly) with the great majority of the Sicilians; to ministers like Raffaelle, Bourbonist in 1847, republican in 1848, deputy of Filangieri and member of the Bourbon municipal government in 1849; or to a notorious Mazzinian like Mario, or to abhorred Bourbonists like Scordato and Miceli, who, after betraying the revolution of 1848, have fought against the insurgents in 1860; or, lastly, to men who have been made infamous through all Europe as the inventors of most atrocious torments against the liberals. General Garibaldi believed, and still believes, that the union of such elements can be useful to the national cause.

It grieved me that every method was tried of discrediting in the eyes of the public the Piedmontese Government and statesmen to whom Italy owes so much; it grieved me that the men most devoted to the national cause, and who have done and suffered the most in the Sicilian revolution, and all the most able and intelligent men should be excluded from the administration of public affairs; that all administrative order should be disregarded; that all the tribunals should be closed; that there should be no force to protect public security; that men of no reputation or of bad reputation should (with three or four honourable exceptions) be chosen governors of districts, with full powers; that furious opposition should be made to the institution of a national guard, the only palladium of order in a country where there are neither magistrates, nor gensdarmes, nor police; it grieved me that the country, while most averse to Mazzinian notions, should be made the nest of all the most incorrigible Mazzinians in Italy.

The reply to this statement appears to be that Garibaldi had no great choice of able Ministers, and that there was only one practical danger before him which he felt it necessary for the cause of Italian liberty to avoid,—the danger of leaving behind him in power at Palermo a party eager to hurry on a premature union with Piedmont, which would have defeated his plans for Italy. That Garibaldi showed no jealousy of the Piedmontese party originally, is admitted by La Farina himself. It was not a prejudice against the men,—it was the imminence of danger from a particular measure that influenced him. Mazzinians or even old Bourbonists, if really sincere in their present liberalism, were not likely to endanger the Italian cause in his absence. They might be less moderate and less justin their views, but there was no practical course open to them of a character likely to compromise Gari-

baldi's plan. Any foolish errors they might make in the civil administration could be rectified at leisure: but the error of paralysing his hand altogether by a premature annexation, and the quarrel with Sardinia which it would involve, could not be rectified at leisure. On the whole, we doubt if any other course was open to him than that which he has pursued. We trust that Count Cavour will have too much self-command to resent Garibaldi's policy, however mistaken he may think it.

One word as to our English policy. The French troops which, as it was promised, were to be *definitively* withdrawn from Rome before this time, still hold the capital, and their departure appears to be deferred *sine die*. The reason is but too obvious. The Emperor of the French is, we fear, utterly opposed to a united Italy, and he knows that while France holds Rome, Italy must continue disjointed. Garibaldi may conquer Naples and may easily disperse the Papal army, but he cannot venture to attack the French garrison. Now it is England's duty to represent in the most explicit form that the tenure of Rome by the French army is a breach of that principle of non-intervention in Italian affairs to which France as well as England has committed herself, and to use our whole influence and strain our whole power to obtain the fulfilment of the arrangement so long promised. Lord John Russell has himself adopted the traditional diplomatic opinion that Italy cannot be safely united under a single crown,—but he is still more deeply pledged to the policy of restraining all other Powers from any attempt to interdict the experiment, should the Italians appear bent on trying it for themselves.

THE MASTERS' VIEW OF THE WAGES QUESTION.

MR CHADWICK'S PAPER ON LANCASHIRE WAGES.

Mr David Chadwick has, at the request of the Manchester Chamber of Commerce, printed a very valuable paper, showing the progressive changes in the rates of wages in the different trades of Lancashire during the last twenty years. Only the other day, too, the many influential members of the Manchester Chamber of Commerce signed, as we believe without exception, the petition which Lord Overstone presented to the House of Lords against the Bill which provides Councils of Conciliation in the different trades consisting in one-half of masters, in the other half of skilled labourers, and intended to arbitrate on all points of dispute between the two. We do not believe that the permissive Bill in question, were it to pass into law, could ever be much more than a dead letter, and this is, we understand, the opinion of those who have far better opportunities of judging than ourselves. But the report which the Manchester Chamber of Commerce have so unanimously welcomed from the able pen of Mr Chadwick, and their petition against the Councils of Conciliation Bill, are both in their way significant facts, and point to the same view, which we may call the Masters' view of the wages question. We fully enter into that view. We believe that it is in a great degree sound, and based on the clearest teachings of political economy. But we have always held and striven to enforce, with the excellent writer in the current number of the *Westminster Review*,* that it is incomplete,—that it partially blinds many of our ablest manufacturers to the best social tendencies of the day, and that unless it is enlarged by an impartial study of the opposite side of the case, it will aggravate the character of those hostilities between capitalists and labourers, which present one of the most threatening features of our time. Let us look for a moment at the facts of the wages question so far as they are known, and at the view which they should suggest to the minds of economists.

First, let us take the most encouraging aspect. Mr Chadwick, in his very valuable paper, has established that in Lancashire at least, during the last twenty years, there has been a steady advance, not only in the money wages, but in the real wages, of labour in almost all the more important branches of trade. It is true that Lancashire is scarcely a fair specimen of England at large. It has been in Lancashire that our most expansive trade during that period—the cotton trade—has developed itself, and of course the prosperity of one enormous trade ensures to a considerable extent the prosperity of many others. Where cotton mills and silk manufactories increase, there buildings will increase also; where there is a steadily increasing demand for spinners, there will be in all probability an increasing demand for bricklayers and stonemasons, and probably for all the labourers besides who are engaged in producing the clothing of the working population, such as shoemakers for instance. And such in fact we find to be the case. In the cotton trade the advance of wages, as Mr Chadwick shows, has averaged from 10 to 25 per cent. during the twenty years, 1839-1859. In the silk trade an advance of wages has taken place in all the branches equal to more than 10 per cent. In the building trades the increase of wages during the same period has averaged from 11 to 32 per cent. In the mechanical trades there has been a general advance in nearly all branches; in some instances this has been equal nearly to 45 per cent. The bootmakers have got an advance of some 20 per cent., and so forth. Mr Chadwick gives the cause of these advances in a few words, which his facts show to be incontestable. "The wages of the workmen have invariably decreased in "every trade where the supply of labour has exceeded the "demand [such as brass-moulders, engravers to calico-"printers, &c.]. In like manner, the wages of the workmen "have been invariably maintained or increased where the de-"mand has equalled or exceeded the supply. The advance of "wages in the great majority of the cases has been directly occa-"sioned by the *improvements in machinery*, whereby the in-"creased production has lessened the cost, and thereby caused "a largely increased demand. This is shown in a remark-"able manner in the cotton trade, the extraordinary exten-"sion of which is certainly owing to the cheapening of "the means of production. But the remarkable case of "the large advance of wages in the building trades presents "a peculiar exception to that of other trades. The ope-"ratives in those trades, by restricting the number of appren-"tices and other arbitrary regulations, have prevented the "supply of labour from being equal to the demand, and "thereby enhanced its value." Elsewhere, after quoting the Building Trades Unions' restrictive conditions of labour, Mr Chadwick adds: "The source of obtaining an increased "supply of skilled labour in the trade is, therefore, to a great "extent, restricted; and this fact has already given rise to "serious apprehensions as to the possibility of being able "to meet the increased demand for labour in the build-"ing trades which the present prosperity of the manu-"facturing districts is now causing." The recent history and present state of wages in Lancashire is, therefore, on all hands admitted to be this. In most of the principal trades they have increased, and are increasing, without injury to the rate of profit, in consequence of improvements in production, which enable both capitalists and labourers to take simultaneously a larger share in the product without loss, nay even with great gain, to the public; but in certain important trades where this has not happened, the gain of the workmen is fast endangering the trade and the capital engaged in it. Now what has happened in Lancashire may be but an imperfect gauge of the tendency elsewhere, for Lancashire has been the seat of our most thriving and productive trade. But still it will not be denied that the tendency in Lancashire is some guide to the tendency elsewhere. In some, though in less degree, the same result will, in all probability, hold of the rest of England, that wages have on the whole risen, in part concurrently with a rise in profits, in part at the expense of profits, and at the risk of diminishing the capital employed in the various trades.

Let us now turn to the less satisfactory question of the *mode* in which this result has been effected, and we find that in almost all trades, whether those in which machinery has greatly increased the productiveness, or those which are unaltered in productive power, the rise of wages has been attended by a chronic conflict between the masters and the workmen, manifesting itself in a continuous series of disputes and strikes, and involving the expenditure of a very large reserve fund on both sides. The fact deserves to be fairly considered, that during a period of not uncheckered, but yet, on the whole, uniformly increasing prosperity, the frequency of those disorganising phenomena called strikes has by no means abated. The violence, the excitement, the unpleasant physical accompaniments of strikes, have, no doubt, been much modified. Even in cases where the combination has been powerful, and the contests long and exhausting, the cases of

* In the article on "Strikes: their Tendencies and Remedies."

violence have been of late years comparatively few. But still the fact remains, that year after year, though masters and workmen are alike learning to administer their own resources with greater prudence and more frugal economy,—though they are learning to estimate with more and more dispassionate accuracy the forces at the command of their opponents,—yet none the less do they find it necessary to appropriate a very considerable capital on both sides for the purpose of inspiring mutual uneasiness, and occasionally of inflicting mutual loss. Very few people are at all aware of the extent and gravity of this social phenomenon. Now and then a great strike forces itself on public notice. But a multitude of smaller strikes happen every month even in the most prosperous years, of which no one hears. The present time is not a period of great trade depression. Yet, without any special knowledge on the subject, we can enumerate at once four or five of these disputes still going on or just ended with various results. There is the Coventry ribbon-makers' strike, the South Yorkshire coal strike, the London bootmakers' strike,—all still pending. In Wednesday's paper a Burnley stonemasons' strike was announced as ended by the concession of the masons' demands. A Leeds strike in the same trade was then pending; and to all these we must add the menace of a renewed London builders' strike. This list we might doubtless double if we had access to any adequate sources of information. One of the Secretaries to the Association of United Trades told the Select Committee of the House of Commons appointed to consider the Councils of Conciliation Bill, that something like 1,000 strikes must have come within his personal knowledge; that during 1846,—a bad year,—at least 50 new strikes were on one occasion reported in a single week, and he enumerates a whole shoal of trades which were all on strike at the same time. And though an unusual number of strikes indicates a period of considerable depression, it is by no means true that in prosperous periods the organisation of trades is relaxed. The difference, probably, consists mainly in this,—that in periods of depression the operatives ignorantly and unreasonably desire to resist,—and therefore resist in vain,—the causes which compel their participation in the sacrifices of their masters, while in times of prosperity they *not* unreasonably demand, and therefore often demand with success, to share the increasing prosperity of their masters.

It is true, then, that wages have risen, in many trades concurrently with profits,—in others at the expense of profits, and even at the risk of seriously diminishing the investment of capital in those trades. But it is also true that it has not been solely the law of demand and supply that has been at work. Mr Chadwick shows clearly enough that where more workmen are wanted, wages must usually rise in order to tempt them into the trade; where there are more than are wanted, wages will usually fall; but it does not come within his scope to examine the exact case in which combination produces a real effect. This is, either where the increase in profit does not arise from increase in demand, but from intrinsic improvements of method in production,—or where the demand occurs in a state of the labour market which enables the masters to engage more labour without giving any higher rate, although their profits could afford it. In either of these cases it is certain that combination may obtain, and does obtain, a higher rate of wages where it could not otherwise be attained. In the words of the *Westminster Review*:—

> The Preston strike has taught the workmen a no less valuable lesson. They also may say—We can never hope to organise a strike more successfully than we did the one of 1854. We were supported by the most munificent subscriptions, and we carried on the struggle much longer than it was believed to be possible. We gained nothing whatever; if therefore our masters are not in a position to give us an advance of wages, no strike can obtain it. We will never, therefore, again make such sacrifices unless we first assure ourselves that our masters are obtaining increased profits from which we can demand a rise of wages. Thus one of the very intelligent leaders of this Preston strike not long since, in a conversation we had with him, said, "For my part, I believe the Lancashire operatives will never strike again." We now observe with the greatest care the current prices of the trade, and we are therefore able to calculate exactly what our masters' profits are; when they increase, we demand a rise of wages; our masters recognise that we have the power of combination, and they thus quietly give us the advance, and every thing now goes on smoothly and pleasantly.

Now what we want the Manchester Chamber of Commerce to consider is simply this,—whether this chronic and expensive reserve fund, which both capitalists and labourers accumulate and expend as a kind of insurance against each other, is always to be a matter of necessity. Its only effect is to procrastinate that division of profits and loss between masters and workmen which the course of trade eventually forces on them. The workmen waste the accumulations of years in contending, as in the Preston strike, for a rate of wages which cannot be given. The masters (less frequently) waste large sums in resisting advances of wages which they eventually concede. Were that most wholesome relation between capital and labour established which, as in the co-operative associations and *commandite* partnerships, fairly recognises the principle of master and workmen sharing increased profits and submitting together to the evils of temporary decline,—this awkward and warlike machinery for coming to terms could not exist. Of course, it is not the work of a year or a generation to introduce this relation, but gradually, we believe, something might be done to extend it, and, in the meantime, a much more complete understanding between master and workman might be brought about by means of friendly and open communications as to the state of trade on the masters' part than at present exists,—without so cumbrous and undesirable a machinery as that which the Bill for Councils of Conciliation would introduce.

THE CASE OF THE UNION BANK.

A PRACTICAL SUGGESTION.

The case of the Union Bank is rather suspended than determined, and we would give no opinion as to its merits—of which indeed it is not possible to know anything of much value without a careful perusal of their deed of settlement, on which everything must turn. The case, however, is a very hard one. The Union Bank is almost the only one which could have provided for a loss of 250,000*l* out of its surplus profits—out of profits which have never been distributed as dividends. Such a praiseworthy example is as rare as the disaster which will sweep away its fruits. It is much to be regretted that any technical difficulty should have interposed to prevent the application of the savings in what is clearly the best way.

Such a difficulty, however, has arisen. The Union Bank had accumulated a surplus fund of in round numbers 220,000*l*, and thinking it too large, they added 120,000*l* to their capital at the rate of 2*l* per share. This sum it is now proposed to "debit back"—to apply it, that is, to wipe out Pullinger's defalcations. But there is a difficulty in so doing. All shares, at least such is the usual form, state that such and such amounts are paid up on them. If a man buy a share with 12*l* paid up on it, there is a difficulty without his express consent in taking away 2*l* of it. As between him and the Directors, doing so is an anomaly. If a capitalist purchase a 50*l* Bank share with 12*l* paid up, the Directors of the Bank could never obtain from him more than 38*l*. Doubtless, if the Bank failed, the creditors of the Bank could take his whole property; but the power of the Directors is limited to that of making calls, and the nominal capital is the maximum they can ask for. But this would be indefinitely affected by "debits to capital." If you could diminish the sum paid up on each share, you could make the same person pay up his capital several times.

To evade this evident evil, the Directors of the Bank do not propose to alter the amount paid up on each share. They propose to keep a floating debit of 120,000*l* to the capital account, until such time as they can wipe it out from future profits.

On the legality of this scheme we can give no opinion; but we would recommend that all Banks which in future add to their capital from profits,—as is often a wise and prudent course,—should take good care not to be obliged to resort to it. They should be able to deduct from each shareholder the amount so *given* to him. A general meeting should have power to do what is right in this case as in other cases. Nor is it difficult to show how this might be done. Each share certificate should state the real facts. A special clause or foot-note should run thus:—" pounds of the capital "which is above stated to be paid were added from the "profits of the Bank to the actual payments of the share-

"holder, and are subject to withdrawal in the manner pro-
"vided for in the deed of settlement." Such words in the share certificate, and a proper clause prescribing fitting formalities in the deed of settlement, may save a Bank in case of loss from much discussion,—perhaps from a Chancery suit.

SPIRIT DUTIES.

Bill to grant Excise Duties on British Spirits and on Spirits imported from the Channel Islands. After preamble:—

Duty on British Spirits.—I. There shall be charged, collected, and paid for the use of Her Majesty, her heirs and successors, for and upon every gallon of spirits of the strength of hydrometer proof, which on or after the several days respectively hereinafter mentioned were or shall be distilled within the United Kingdom, or which, having been distilled within the United Kingdom, were on the said several days respectively in the stock or possession of any distiller, or in any duty-free warehouse, or removing to such warehouse, and were or shall be on or after the said several days respectively taken out for consumption within the United Kingdom, the several and respective duties following; that is to say, on and after the 29th day of February, 1860, the duty of *Eight Shillings* and *One Penny:* and on and after the 16th day of July, 1860, the duty of *Ten Shillings:* and so in proportion for any greater or less degree of strength, or any greater or less quantity, in lieu of all other duties of Excise now chargeable on such spirits.

Duties on Channel Islands Spirits.—II. In lieu of the duties of Excise now chargeable on spirits manufactured or distilled in the Islands of Guernsey, Jersey, Alderney, and Sark respectively, and imported into the United Kingdom, there shall be charged, collected, and paid for the use of Her Majesty, her heirs and successors, for and upon the several articles next hereinafter mentioned, on the importation thereof respectively into the United Kingdom from any of the said islands, on and after the respective days mentioned in the several columns marked respectively (A) and (B) in the following schedule the several and respective duties of Excise therein specified:—

Schedule.	(A.) Duties on and after March 28, 1860. £ s d	(B.) Duties on and after July 17, 1860. £ s d
Spirits or strong waters, not being sweetened or mixed with any article so that the degree of strength thereof cannot be ascertained by Sykes's hydrometer, for every gallon of the strength of proof by such hydrometer, and so in proportion for any greater or less strength than the strength of proof, and for any greater or less quantity than] a gallon.....the gallon	0 8 6 ...	0 10 5
Æther and spirits being sweetened or mixed so that the degree of strength cannot be ascertained as aforesaid, and perfumed spirits to be used as perfumery only the gallon	0 12 0 ...	0 14 0
Spirits or strong waters imported into the United Kingdom mixed with any ingredient, and although thereby coming under some other denomination, except varnish, shall nevertheless be deemed to be spirits or strong waters, and be subject to duty as such.		
Water, Cologne, the flask (thirty of such flasks containing not more than one gallon).....each	0 0 5 ...	0 0 6
When not in flasks as perfumed spirits the gallon	0 12 0 ...	0 14 0

All which said last-mentioned duties shall be levied and collected by the officers of Customs under the direction of the Commissioners of Customs, who shall cause a separate account to be kept and to be furnished to the Commissioners of Inland Revenue of all such duties collected and received, and the amount thereof shall from time to time be paid over to the account of the Receiver-General of Inland Revenue at the Bank of England, and shall be dealt with and applied in the same manner as other monies arising from duties of inland revenue; and all such spirits imported from any of the said islands shall be subject to the same laws and regulations as spirits imported from foreign parts, and shall be dealt with by the Commissioners and officers of Customs in all respects as if the same had been so imported under the laws relating to the Customs.

Allowances.—III. In consideration of the loss and hindrance caused by Excise regulations in the distillation and rectification of spirits in the United Kingdom, there shall be paid to any distiller or proprietor of such spirits on the exportation thereof from a duty-free warehouse, or on depositing the same in a Customs warehouse, on or after the 5th day of March, 1860, the allowance of *Twopence* per gallon computed at hydrometer proof, and to any licensed rectifier who, on or after the said last-mentioned day has or shall have deposited in a Customs warehouse spirits distilled and rectified in the United Kingdom the following allowances; (that is to say,) on rectified spirits of the nature of British compounds not exceeding eleven degrees over-proof as ascertained by Sykes's hydrometer, an allowance of *Threepence* per gallon, and on spirits of the nature of spirits of wine an allowance of *twopence* per gallon, such gallons being computed respectively at hydrometer proof.

IV. The said several duties and allowances by this Act imposed and granted respectively shall be under the management of the Commissioners of Inland Revenue, and shall be charged, raised, levied, collected, recovered, paid, and allowed respectively by the ways, means, and methods provided by this Act, and by the several Acts in force relating to the duties of Excise; and all such last-mentioned Acts, and all fines forfeitures, and penalties for any offence against or in breach of any Act in force in relation to duties of Excise, and the several clauses, provisions, powers, and directions contained in any such Act, shall (except as the same are altered, repealed, or superseded by the express provisions of this Act) extend to and shall respectively be applied, practised, and put in execution for and in respect of the said duties and allowances hereby imposed and granted respectively, in as full and ample a manner, to all intents and purposes, as if the same respectively had been repeated and re-enacted in this Act with reference to the said duties and allowances respectively.

V. And whereas contracts or agreements may have been made for the sale or delivery of some of the goods or commodities on which increased or additional duties of Excise are by this Act granted and imposed, which contracts or agreements may have been made with no reference to such additional duties, and thereby the several contractors may be materially affected: for remedy thereof be it enacted, that every person who shall have made or entered into any such contract or agreement shall be and is hereby authorised and empowered, in the case of any such contract or agreement, to add so much money as will be equivalent to the increased or additional duty hereby granted on any such goods or commodities respectively to the price thereof, and shall be entitled by virtue of this Act to be paid and to sue for and recover the same accordingly.

MORETON BAY COTTON GROWING.

PROSPECTUS OF THE MARYBOROUGH AND WIDE BAY COTTON-GROWING ASSOCIATION.

Capital, 3,000*l.*
In Six Hundred Shares of Five Pounds each.
Liability limited to amount of shares.

Directors.

Mr James Buchanan | Mr Robert Case | Mr Charles Faulkner
Mr William Southerden | Mr James Dowzer | Mr Abraham Thacker.

Secretary—William Richardson.
Bankers—Australian Joint Stock Bank, Sydney.
Solicitors—Rowley, Holdsworth, and Co., Sydney.
Agricultural Manager—James King.

The mode of paying the amount of shares as below, or oftener, in small sums, as decided on by the directors, by four equal payments, six months apart:—

25 per cent., or	£1	5	0	on the commencement of the operations of the Association.
25 per cent., or	1	5	0	at 6 months.
25 per cent., or	1	5	0	at 12 months.
25 per cent., or	1	5	0	at 18 months.
Total	5	0	0	—or 1 share.

The objects for which this Association is formed is to prove the practicability of producing this valuable article of export in large quantities proportionately remunerative, with free labour, and the incalculably immense results which must follow its extensive cultivation in our new colony of Queensland. It is considered that the shares of this Association offer one of the most profitable investments for capital in the present day, and that while the shareholders are forwarding a noble enterprise, they are largely benefiting themselves also.

The cotton plantation is intended, in the first instance, to comprise not less than 100 acres, of which 50 acres will be under cultivation the first year, and will be formed on the banks of the river Mary, from whence the cotton bales can be shipped direct for England free from any other charges, and where the soil and climate are of such a nature as to ensure large crops of the finest and most valuable Sea Island cotton. Cotton sent home from these districts has been valued as high as three shillings (3s) per lb, as the following letter will show from Messrs Hollingshead, Tetby, and Co., the largest cotton brokers in Liverpool, and therefore in the world,—which was read before the Agricultural Association, at Sydney, in June, 1858, by his Excellency the Governor-General Sir William Denison:—

Copy of a Report on Moreton Bay Cotton.

To Messrs John Tetby and Sons, London.

Liverpool, January 23.

Gentlemen,—We have carefully examined the sample of Australian cotton sent to us for valuation. It ranks with the highest class of Sea Island cotton, and (free from a few spots of stains) is worth 3s per lb in this market. It is superior in fineness and evenness of staple, though a little inferior in strength of staple, as compared with Sea Island. We return you the sample, as you may not have retained any, and send you a small bit of Sea Island, worth, to-day, 2s 6d per lb, and another purchased to-day at 2s 9d per lb, both inferior to your sample in our opinion, and in the opinion of the purchaser of the 2s 9d lot.—Your obedient servants, Hollingshead, Tetby, and Co.

Mem.—The calculations in this prospectus are made, fixing the value of cotton at only 2s per lb.

It is generally acknowledged by all who have studied the nature of the cotton plant, that the warmer regions of the temperate zone are most suitable to its cultivation and perfection, as being subject to no frosts to cut short the produce of the crops. Now, Wide Bay is exactly so situated, and, as Dr Lang observes, is the cotton-growing district of Australia, now Queensland, and will enable the plantations there to produce nearly two-thirds more cotton than can be grown in the Southern States of America, which will render its cultivation so much more valuable to those who now engage in it. In fact, cotton was grown in the neighbourhood of Wide Bay last season, at the rate of 680 lbs of clean cotton per acre, which at only 2s 3d per lb, would realise 76*l* 10s per acre.

Form of Application for Shares.

I am willing to take shares in the Maryborough and Wide Bay Cotton-Growing Association (or such smaller number as may be allotted to me by the directors), and hereby bind myself to pay the deposit on such shares when called upon and every successive call to the amount subscribed for, according to the terms of the constitution of the Association.

Applications to be addressed to "The Chairman of Directors of the Cotton-Growing Association, Maryborough, Wide Bay."

Dr Lang says: "There seems to be a peculiar adaptation of the soil and climate of Queensland to this important article of agricultural produce; as compared with the United States there is everything in our favour. The summer heat of the country is much the same as the cotton-growing States of America; but there is all the difference imaginable in our respective winters. The luxuriant richness of our alluvial soil will yield us a much fuller crop than that obtained from the sandy sod of South Carolina, besides saving us a cost of 5*l* per acre for manure; and the mildness and warmth of our autumn will cause our cotton plants to produce pods for two months later than the Southern States."

Agriculture.

NOTES AND PROSPECTS.

The time has arrived at which a tolerable estimate of our agricultural prospects for the present season may be formed. We can now judge with considerable accuracy what our crops are likely to produce, should the rest of the period—which, perhaps, according to the almanack, must be called summer—prove reasonably fine. During the past fortnight a good deal of hay has been cut, and some of it has been stacked, but nothing has been more remarkable, since the cessation of continual rain, than the slowness with which the grass has become hay. The sun has appeared to possess no great power, the temperature has been very low for the time of year, and there has been an absence of those breezes which sometimes in the hay season make up for deficiency of sunshine. Rain has again fallen this week, and has greatly impeded progress with the hay harvest. The crops of grass vary greatly. Where the land is in high condition and has not been trodden with stock during the winter the crop is abundant, but where the meadows are not in good heart, or where they have been depastured during the winter and early spring the crop of grass is but scanty. Even when well-drained the stronger loams were so constantly drenched with rain that they seem to have lost much of their vegetative power, for the grass since the rain has ceased has made no great progress, and especially it does not spring up after the bite of the stock as in ordinary seasons. An instance will illustrate this; last year five yearling Shorthorn heifers and three colts were turned out on the 1st May into a meadow of eight acres on land consisting of a fertile loam; all the animals remained until late in September, and had abundant pasturage during the whole time. This year on the 1st of May the like numbers of yearling heifers and of colts were turned into the same meadow, and, although there was then a somewhat better show of grass than last year at the corresponding time, it was found necessary during the last week of June to remove the five heifers to another field, leaving the three colts in sole possession of the eight acres, and which up to this time does not appear to promise any great superabundance of food for this diminished stock.

The wheat and oat crops, however, have made considerable progress since the cessation of the rains, and will, over a vast extent of England, be fair crops, though, being late, some hazard in the gathering has to be apprehended. The barley is still bad, and in many places almost irrecoverable. Beans and peas have improved, and, except on wet soils, will produce much more than could have been looked for a month ago. In some places, beans have been attacked by the black fly, and unquestionably the prayer of all farmers is for warmth—for more sunshine. The districts around and to the south of London have, it is clear, suffered more from wet than the more northern parts of the island, especially during the spring.

As regards sheep, the losses have been great and general. At the Canterbury dinner of the Royal Agricultural Society, Lord Berners, after pointing out "that the members of the Society had the advantage of communicating with its veterinary surgeon in case of a disease breaking out in the neighbourhood among the cattle, and if the malady is of sufficient importance," stated that in his own district [in Leicestershire] "last winter there was a terrible mortality among sheep, which he really believed might have been almost entirely prevented if the veterinary surgeon of the Society had been asked down. *Not less than* 15,000 *sheep died within an area of ten miles;* whereas in another district, which the Society's surgeon attended, the mortality did not exceed three in every hundred." Without doubt proper veterinary assistance will often do much to stay the progress of disease amongst a flock; but the above statement shows to what an extent disease was caused amongst sheep by the unfavourable winter and spring we have gone through.

In reference to another kind of stock, horses, Lord Winchelsea made some remarks at the same dinner, which may be noted for the consideration of English horse-breeders. He said: "They (the Americans) took away some of our best animals, and now, I believe that, for reasons I will presently mention, they beat us in their horses." This was certainly met with some cries of "No." His Lordship, however, persisted, saying: "They manage things in this respect on more intelligible principles. I can assure you that, in consequence of our short courses, the English breed has degenerated. We no more get animals that will go a long distance; whereas America sends us horses sixteen hands high, useful and strong, with great staying powers. This is just the sort we want; not a horse that is done up after running a mile or two, but one capable of lasting and being fit to work (which at present most of our English breed are not) after it is two or three years old. But America has improved upon us by means of that free competition into which we have entered with all the world; and this instance will show you how beneficial such competition is." These observations apply to racing horses, and we have no doubt they are in a great measure just. The present system of the turf induces breeders to seek to perpetuate speed, though only for a short distance, beyond all other qualities in their stock. And this must naturally affect other kinds of horses for saddle and quick harness-work, which are all more or less crossed with the thorough-bred horse. It is satisfactory to find such unqualified praises of competition in matters agricultural from such a quarter and in such a company. Of its immense benefits to all concerned there can be no question.

The Dean of Canterbury, in speaking on the "labouring classes," noticed a point of importance in connection with agricultural progress:—"And there are circumstances now passing around us that may give confidence and courage to all who are engaged in working for the good of the labouring classes. The improvement that has taken place in the labouring class cannot be denied. It is to be found in all the ranks of that innumerable army; in those whose march is in the furrowed soil, whose home is in the glebe, as well as in those who toil at the forge or devise and carry out those wonderful machines which we have seen to-day. One great benefit of modern improvement is the tendency to unite in the same workman the knowledge of different trades. The division of labour confines a man to a particular branch of a trade; the concentration of labour that these inventions aim at, and often attain, has precisely the opposite effect. For instance, agricultural servants will no longer be able to live in ignorance of machinery; every farm labourer will be soon also something of a machinist." The gradually increasing use of machinery is certainly doing much towards creating a class of skilled labourers amongst the agricultural workmen, and nothing can be more beneficial to themselves and their own class as well as to their employers.

Literature.

The Sources of the Nile: Being a General Survey of the Basin of that River, and of its Head-Streams; with the History of Nilotic Discovery. By Charles T. Beke, Ph.D. James Madden.

The volume before us is based on an essay "On the Nile and its Tributaries," contributed by Dr Beke to the Royal Geographical Society at the close of the year 1846, and on various subsequent papers which bring down the history of these geographical investigations to the present time. The last few years, as Dr Beke points out, have been marked rather by an intelligent and consistent reconstruction of the map of the district in accordance with ascertained information than by any great accession of geographical facts. The result has been the establishment of what Dr Beke claims as a special theory of his own. "The principal mountain system of Africa," he observes, "is now found to extend from North to South, in proximity to the Red Sea and the Indian Ocean, instead of running across the continent from East to West, as shown in all maps, both ancient and modern, excepting only those recently constructed, in which the 'Mountains of the Moon' are laid down in accordance with my views." A more important result from this theory was pointed out to Her Majesty's Government by Dr Beke as long ago as 1852. The vast continent of Africa has hitherto "remained, as it were, a sealed book" to civilised Europe, and this has been attributed to its "arid and inhospitable character, its want of navigable rivers, and the barbarism of its inhabitants. But, active as all these causes may have been, and still continue to be, recent discoveries have shown that they are far from being true to the extent generally attributed to them; for it is now demonstrated that Africa possesses fertile and genial regions, large rivers and lakes, and an immense population, which, if not civilised, is yet to a considerable extent endowed with kindly manners, humane dispositions, and industrious habits."

"The fundamental cause," Dr Beke proceeds to say, "of the erroneous notions prevalent respecting Africa, is that Europeans have always approached that continent in a wrong direction. Towards the north, the districts skirting the Mediterranean Sea are cut off from the other portions of the continent by the rainless sands of the great Desert; towards the west, the climate truly exercises those baneful influences on European constitutions which have stamped their mark on the rest of the continent; towards the south, the form of the peninsula, which there runs almost to a point, prevents ready access to the vast internal regions further to the north. On all these sides, however, have we during centuries persisted in our endeavours to penetrate inwards, while the east coast has been unattempted and remained almost totally unknown. And yet it is in this direction that the interior of Intertropical Africa is approachable with the greatest facility.

"Of the physical character and climate of Eastern Africa a general outline is given in my 'Essay on the Nile and its Tributaries;' and I cannot do better than repeat, on the present occasion, the concluding remarks there made on the subject:—'This survey of the physical

character of the plateau of Eastern Africa cannot be concluded without special attention being directed to a most important practical result which it affords. It is, that the eastern coast of that continent presents facilities for the exploration of the interior very superior to those possessed by the western coast. For, when the narrow belt of low land along the shores of the Indian Ocean—which, from its general dryness, arising from the absence of large rivers, is far from unhealthy at most seasons of the year—is once passed, and the eastern edge of the elevated table land is attained, a climate is met with which is not merely congenial to European constitutions, but is absolutely more healthy than that of most countries. I speak from the experience of upwards of two years passed on the high land under circumstances anything but favourable. Here,—that is to say, on the edge of the elevated plateau, and not in the low desert country along the sea-coast,—settlers might take up their permanent residence, without apprehensions as to the effects of the climate at any period of the year; while travellers might wait in safety, and even with advantage to their health, till suitable opportunities should present themselves for penetrating westward into the interior; and, in the event of their having to retrace their steps, they would only return upon a healthy and delightful country, where they might remain till the proper season should arrive for their journey down to the coast. On the other hand, the climate of the western coast, even far inland, is notoriously such, that few can long withstand its baneful influences; while a traveller is necessitated to press forwards, whatever may be the time of the year, whatever the condition of the country, whatever even his state of health. And should he, from sickness or any other unforeseen circumstance, be compelled to abandon his journey, he must do so with the painful knowledge, that the further he retrogrades the more unhealthy are the districts which he has to traverse, and the less likelihood there is of his ever reaching the coast, more fatal than all the rest.'"

The ancients, as Dr Beke, following the steps of Heeren, points out, were well acquainted with the fact now only beginning to be recognised by the modern world. Commerce has left the footprints of her former achievements in "a chain of ruins extending from the shores of the Indian Ocean to the Mediterranean." And with commerce have been introduced to a considerable extent the ideas of religious faith which are prevalent in these districts.

"As regards Africa, the fact is indisputable—and it is one which is pregnant with inferences—that the greatest movement of the population is from west to east and from east to west; pilgrims from the remotest regions of Western and North-Western Africa traversing the entire breadth of the continent, on their way to and from the Caaba and the tomb of their prophet and lawgiver. And this, indeed, is the road which has unalterably been trodden during countless ages; for it existed long before the time of Mohammed, who merely dedicated to the worship of the one true God the world-renowned fane of the idols of the Sabæans.

"The pilgrims who frequent Mecca are almost of necessity merchants, trading from place to place often as the sole means of enabling them to perform their journey. And it is by the same simple means that the Mohammedan religion has attained its great development throughout Central Africa;—not by any zealous and expensive, or indeed intentional, propagandism, but by the casual communication between these Moslem merchant-pilgrims and the rude Pagans through whose countries their route happens to pass. The strict outward devotional forms of the Mohammedans, and their constant mixing up of religious invocations in the ordinary processes of life, are no doubt mainly instrumental in bringing about those results."

The name of Mohammed has been introduced into regions wholly ignorant of his divine claims, simply by the chant of the native Pagans who towed the vessels on the Nile, caught up from the Mussulman crews.

In speaking of the sources of the Nile, Dr Beke uses the expression in the most general sense, "as meaning all the head-streams that take their rise at the extreme limits of the basin of that river, along the water-parting between it and the conterminous basins of other African rivers flowing towards the Red Sea, the Indian Ocean, the Atlantic, and the Mediterranean, or (as in the case of some Asiatic, American, and also other African rivers) forming separate inland hydrographical systems unconnected with the ocean." Proceeding with this understanding, our author points first to the remarkable fact that—

For a distance of more than thirteen hundred geographical miles from the Mediterranean, into which it discharges its waters by several mouths, this mighty river, the largest of the African continent, and probably unsurpassed in length by any river in the whole world, is a single stream. Fed by the copious rains of the tropics collected by its innumerable head-streams in the south, it is able to contend with the burning sun and the scarcely less burning sands of Nubia and Egypt throughout this extent of country, without the aid of a single tributary;—a phenomenon presented by no other river.

A peculiarity of the Nile scarcely less singular, is that for upwards of six hundred and fifty geographical miles above the point just mentioned, or in all full two thousand miles from its mouths, the river receives no affluent whatever on its left or western side. On its eastern side, however, within the same limits, it receives three tributaries, the Atbara, the Bahr-el-Azrek or Blue River, and the Sobat or Telfi, having their origin in the elevated table-land of Abessinia.

The first of these branches, called also the "Bahr-el-Aswad or the *Black* River," from the quantity of black earth brought down by it during the rains, "is most important, because it contributes the largest amount of the slime which manures and fertilises the land of Egypt." The third great tributary of the Nile—of which the Sobat is a feeder—known generally as the "Bahr-el-Abyad or *White* River," "is of great magnitude, and is said to contribute to the river nearly a moiety of its waters." Its main stream might, however, rather, according to Dr Beke, be called the "*Black* River," on account of the colour of its filthy, stagnant, unwholesome water." The water of the Sobat, on the other hand, is stated to be actually *white*. After devoting separate chapters to the description of the Black, Blue, and White Rivers, with their respective feeders, and tracing historically the knowledge we have been able to obtain respecting each of them, Dr Beke arrives at his critical chapter entitled "The True Nile and its Sources." As we decline taking upon ourselves the responsibility of so important a communication, we will quote the author's own words:—

There are two rules for determining which of the various head-streams of a river is entitled to be regarded as its upper course, and consequently to bear the name borne by the united stream lower down. The one rule is theoretical or natural, the other is practical or conventional. By the former the greater length and size and the general direction of the valley or basin of the river are the main considerations. By the latter it is the first acquaintance which the inhabitants or discoverers of the valley of the main stream may make with one of its branches (or the converse), that causes the name of the former to be carried over to the latter.

In the case of the great river of Africa it fortunately happens, that through the far greater portion of its course both rules are applicable; the direct and main stream having been the first known and first explored. Herodotus and all writers anterior to Ptolemy concur in describing the Nile as coming from the west, and the first explorers on record, namely, Nero's two centurions, passing by the mouths of the Astoboras or Atbara, the Astapus or Abai, and the Astæsobes or Sobat,—all three affluents of the Nile on its right or eastern bank,—penetrated up the main-stream, in a direction always tending towards the west, as far as the ninth parallel of north latitude the river there still coming from the west or south-west. Thus far, it is manifest, theory and practice went hand in hand.

From this point Claudius Ptolemy takes of the description of the river; and since his time the sources of the Nile in the Mountains of the Moon, with their snows, lakes, and cannibals, have been prominent and established features of African geography.

Here, unfortunately, facts end and conjecture alone remains. The last pages of Dr Beke's volume are, we must say, rather disappointing to those who have been led on to that point by his somewhat too solemn prefatory axioms. The existence of these Lunar mountains is, we believe, still strenuously denied. All the learned geographer is able to say is:—

It is, however, of little avail to reason on insufficient data. This alone is certain,—that *all* the head-streams of the Nile must be thoroughly explored before it would be in our power to finally and irrevocably to decide which among them is entitled to the designation of *the Source* of the Nile. Till then we must remain content to own, with the poet—

"Arcanum natura caput non prodidit ulli,
Nec licuit populis parvum te, Nile, videre."

Whether, therefore, the "Tubiri," or the "Sobat," or any other of the feeders of the "White River" is to be considered as representing the ultimate head-stream of the Nile,—and in what exact district, lake, or moon-mountains the "source" of the "Nile" is to be found,—remain as much as ever undecided questions, although undoubtedly Dr Beke's volume simplifies the matter by reducing the points which have to be discussed within a definite and comparatively narrow compass, and extinguishing those claims which are entirely beside the question.

Much of the interest of his volume consists in the subjects incidentally discussed. Among these, the possibility of turning the course of the waters of the Nile away from Egypt and discharging them into the Red Sea is one of the most curious. "In the beginning of the sixteenth century, it was a matter of popular belief in Europe that the King of Abessinia could prevent the Nile from flowing down into Egypt, and that the ruler of the latter country had in consequence to pay him a large yearly tribute." Dr Beke is extremely hostile throughout his volume to the celebrated traveller Bruce, whom he accuses, on the alleged authority of that traveller's own journals, of wilful misstatements and pure inventions in his published works. On the point of turning the Nile, he brands as apocryphal a story alleged by Bruce to have been told him "by Emmaha Yésus, Prince of Shoa, a young man between twenty-six and twenty-eight years of age, with whom the traveller lived several months in the most intimate friendship at Gondar, and from whose mouth he received some minute and circumstantial details respecting certain works, constructed in Shoa, by Lalibala, King of Abessinia, for the purpose of turning into or towards the Indian Ocean certain head-streams of the Nile within that kingdom."

Half a century ago, Mr Salt was led to doubt the tale, in consequence of the assurance given him by a native scribe, who had personally known Bruce in Abessinia, that Emmaha Yésus never visited Gondar during that traveller's stay there, and from the fact that no account of that prince's alleged visit is to be found in Bruce's original memoranda, where it could hardly have failed to be recorded. Since Salt's time, the kingdom of Shoa has been visited by several Europeans, myself among the number; and it is now known, as an historical fact, that the reign of Emmaha Yésus, the great-grandfather of the late King Sáhela Selássye, lasted from 1742 to 1774; so that, in the year 1770, when Bruce pretends to have known that prince at Gondar, as a young man between twenty-six and twenty-eight years, who had brought tribute from his father as a vassal of the Emperor, Emmaha Yésus had himself been upwards of twenty-eight years seated on the throne of the independent kingdom of Shoa. It might be shown that the description so elaborately given by Bruce, on the pretended report of Emmaha Yésus, of the gigantic works constructed by King Lalibala in the vicinity of Lake Zuwái in Southern Abessinia, is simply a romance. But it is needless to pursue the subject. It is merely requisite to remark that, so intimately has Bruce's circumstantial narrative associated King Lalibala and Lake

Zuwái with the traditional history, and so thoroughly have, on his authority, those two ideas become blended with the primary one, that subsequent travellers and writers have taken their connection for granted, and have treated the subject as if Bruce's fallacious commentary were an integral and essential portion of the original tradition.

The time has however arrived when the whole of these erroneous notions may be discarded. The Astaboras, Atbara or Tákkazye, is the "Nile" of Elmazin, Cantacuzene and Albuquerque: and the channel by which its waters might be made to pass into the Red Sea is Artemidorus's "branch" of that river, or the lower course of the Khor-el-Gash.

At the present day the plain country lying on the eastern side of the Atbara, formerly subject to the Axumite or Ethiopian monarchs, is occupied by tribes of doubtful origin, who continue to avail themselves of the facilities afforded by the physical character of the land, for diverting the course of the river flowing through it, and preventing its waters from reaching the regions lying lower down the stream; though in this instance it is not the Atbara itself, but the Khor-el-Gash, on which the operation is performed.

M. Ferdinand Werne, who in 1840 accompanied the Turco-Egyptian army under Ahmed Pasha in its campaign against Taka and the neighbouring districts, gives, in his published relation of the expedition, a circumstantial account of an attempt made by the Pasha, at the suggestion of Mohammed Ehle, one of the native chiefs, to dam up the Khor-el-Gash near Kassela-el-Lus, and to turn its waters into the Atbara. The attempt failed, from the works having been badly constructed; but the particulars recorded by M. Werne sufficiently prove the practicability of the undertaking under more favourable circumstances.

But if, as it appears from M. Werne's statement and from what we otherwise know of the extremely level character of the country, the waters of the Khor-el-Gash may be turned into the Atbara by means of a mere embankment and canal, the converse must be likewise practicable; that is to say, the waters of the Atbara might by similar means be turned into the bed of the Khor-el-Gash; or to express it more distinctly, they might be discharged into the plain country of Taka, over which (as has been shown in a preceding page) the waters from the Abassinian highlands spread themselves during the rains, and from whence, at Fillik, they pass away by two different outlets, the one into the Atbara itself lower down its course, and the other down the valley leading towards the Red Sea near Suwakin; and the one of those two outlets being closed, the entire waters would of necessity pass away by the other.

From these extracts, it will be seen that to those who are interested in tracing out what we may call the natural routes of commerce, Dr Beke has contributed a volume which will be a welcome book of reference and a trustworthy guide.

THE ART-JOURNAL for June and July, 1860. Arthur Hall, Virtue, and Co.

Two of the engravings in the June number of the "Art-Journal" are from pictures in the Royal Collection. One is a portrait of Lady Digby by Van Dyck, a fine composition in the elaborate allegorical style, and the other is Wilkie's popular and delightful picture of "The Penny Wedding." The third engraving, of Turner's "Dido building Carthage," is familiar to all frequenters of the National Gallery, where, hung between two Claudes, it fully sustains the equality of modern landscape with the best specimens of the old school, if, indeed, it does not surpass them. The number of wood-cuts is smaller than usual in the June number, owing probably to the amount of space devoted to notices of the Royal Academy and the two water-colour exhibitions. There are, however, two illustrated chapters, one on William von Kaulbach and one on the scenery of South Wales.

The frontispiece in the July number of the "Art-Journal" is the engraving of a picture entitled "Peace," by Mr Drummond, a Scotch artist, and member of the Royal Scottish Academy. This picture, with its companion "War," was exhibited in the British Institution in 1850, and both are now in the Royal Collection. Turner's "Bacchus and Ariadne" from the National Gallery, and MacDowell's simple and graceful statue of a young girl entitled "Reading," are the subjects of the two remaining engravings. Besides "Hudson" and "South Wales," there are two other illustrated chapters, one entitled "Rome, and her Works of Art," and giving wood-cuts of several of Raffaelle's works, and the other giving the rudiments of fleriated and ornamental drawing among the Hindoos. We recommend a study of the latter to all interested in art-manufactures.

THE LONDON QUARTERLY REVIEW. Alexander Heylin.

THE chief article in this number is a long and elaborate review of "Mansel and his Critics." The reviewer agrees mainly with Dr M'Cosh and Dr Young; against Mr Maurice he is exceedingly bitter, although adopting some of his arguments against Mansel. There are also articles on Darwin's "Origin of Species," and the Oxford "Essays and Reviews," written from an antagonistic point of view, but in a cordial and not ungenial spirit. A somewhat flippant paper on Dr Laycock's "Mind and Brain," a good *resumé* of "Slave Politics and Economies," a curious article on "London in the 13th Century," together with papers on Ragged Homes, Bishop Wilson, Domestic Annals of Scotland, and General Patrick Gordon, make up a very readable number of this Review.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The half-yearly returns of the indirect and direct taxes have been published. They show that the amount of indirect taxes received in the first half of the present year was only 521,476,000f, which was 11,997,000f less than in the corresponding period of last year, and 18,451,000f less than in that of 1858. It will be observed from the detailed account below, that the falling off is almost entirely in the Customs duties, and in the duties on the manufacture of native sugar, caused by the great changes effected or impending in the tariffs; and that the other items are on the whole satisfactory,—with, however, the exception that the wine duties for the present half-year show a small decline compared with the corresponding half-year of 1859, whereas they ought to have increased:—

	First Six Months of—		
	1860.	1859.	1858.
	f	f	f
Registration and mortgage duties	151,052,000	134,263,000	146,476,000
Stamp duties	27,657,000	26,751,000	28,816,000
Customs duties on imports of grain	399,000	746,000	208,000
— on different descriptions of merchandise	41,434,000	53,970,000	52,293,000
— on French colonial sugar	14,232,000	22,859,000	25,626,000
— on foreign sugar	13,116,000	17,632,000	13,777,000
— on exportations	1,531,000	2,693,000	1,684,000
Navigation duties	2,038,000	1,918,000	1,722,000
Various Customs duties and receipts	977,000	898,000	2,385,000
Tax on the consumption of salt in the Customs districts	13 023,000	12,421,000	12,295,000
Duty on wines, &c.	85,488,000	85,564,000	79,293,000
Tax on the consumption of salt beyond the Customs districts	4,171,000	3,991,000	3,595,000
Duty on manufacture of native sugar	17,773,000	25,944,000	34,396,000
Various duties and receipts	25,058,000	24,302,000	23,032,090
Sale of tobacco	91,029,000	88,411,000	86,158,000
Sale of gunpowder	3,540,000	3,388,000	3,878,000
Post office	27,682,000	26,927.000	25,175,000
Duties of 2 per cent. on money orders	861,000	901,000	820,000
Duty of 10 and 2 per cent. on securities transmitted through the Post office	218,000	...	...
Duty on transit of foreign mails	254 000	282 000	284,000
Various receipts	23,000	12,000	14.000
Total	521,476,000	533,473,000	539,927,000

As to the direct taxes, it appears from the returns, that of 478,004,000f due up to the end of June, not less than 243,996,000f had been paid. As these taxes can only legally be exacted in monthly instalments, and a month after they are due, the amount paid was 44,828,000f more than was called for; whereas last year the sum paid in advance did not exceed 40,268,000f. Moreover, in the course of the six months the average expense for recovering taxes in arrear was only 71c the 1,000f, whereas in the same period of last year it was 76c the 1,000f.

The Customs returns both for June and for the first six months in the year have appeared to-day, but I must reserve the analysis of them to my next. As will be seen from the preceding table, they show a decline in import duties for the first half of the present year compared with the corresponding period of the last two years. Several of the principal articles of export likewise present a decline.

The Superior Council of Commerce has, in its recent sittings, examined persons engaged in the woollen manufactures of Sedan, Louviers, and Elbeuf, in order to ascertain their views as to the duties to be imposed on woollen goods imported from England under the commercial treaty.

The Government Bill for lending 40,000,000f to manufacturers to change and improve their machinery, so as to enable them the better to resist English competition, encountered considerable opposition in the Legislative Body, and had to be modified before it was adopted. A committee pointed out, in somewhat decided terms, that for the Government to lend money to private persons causes many serious inconveniences; is altogether bad in principle; that the financial situation of the country does not allow such a sum as 40,000,000f to be disposed of without embarrassment; that to borrow it in order to lend again would be very objectionable; that it is lamentably insufficient for the purpose required, &c. The committee accordingly proposed the establishment of a special bank under Government guarantees to lend largely, and for long periods, to manufacturers, but this was rejected. Eventually a Bill was passed, allowing the Government to "dispose of a sum of 10,000,000f, as a guarantee capital, to an existing bank or company which will undertake to make advances to manufacturers at 5 per cent., and for a period not exceeding five years, the bank or company on its part supplying an equal guarantee capital." In the event of no bank or company treating with the Government on these terms, the Minister of Finance is authorised to advance manufacturers 40,000,000f at 5 per cent., and to raise the sum by an issue of Treasury bills.

The Legislative Body has by, as usual, an overwhelming majority adopted the Budget of 1861, which, as stated in my last, amounts to the enormous figure of 72.000,000*l* sterling. The discussion on it did not do much credit to the aforesaid "Body," most of the speakers confining themselves to vile laudation of the Government, or to small matters of detail. M. Jules Favre alone had the courage to show that, though by an artful arrangement of figures the Budget has been represented by the Minister of

Finance as presenting a surplus, various large items which ought to have been included have been omitted from it, on the pretext that they are "extraordinary." He also noticed the enormous increase which, under the present Government, has been made to the debt, the increase which has taken place in taxation, and other bad points in the financial situation.

The Minister of Agriculture and Commerce has addressed a circular to the Chambers of Commerce, informing them that England and France, in the war in China, intend to spare as much as possible the commercial interests of their subjects and those of neutral nations," and that, as regards the sharing of prizes which may be made, "the jurisdiction of each country" is to be exercised, instead of that of "the country of the captor" exclusively, as in the Crimean war.

It was stated some time back that the Government had presented a Bill to the Legislative Body, authorising it to concede to a Company the execution of railways in Algeria, with a subvention of 6,000,000f and a guarantee of 5 per cent. interest for 75 years, on a capital not exceeding 55,000,000f. The concession has just been made to M. Rostan, a director of the Messageries Imperiales and of the Credit Industriel Bank; M. Gauthier, director of the Dauphiné Railway; Count Branicki, director of the Credit Foncier; M. Lacroix, an architect; Mr W. Gladstone, of London, director of the Orleans Railway and of the Credit Industriel Bank; and Mr H. T. Hope, the London banker and M.P. The concession is for 99 years, and is for a railway from the sea to Constantine, to be made in four years; one from Algiers to Blidah, to be made in a year; and one from St. Denis du Sig to Oran, in three years. Of the subvention, 1,500,000f are represented in earthworks already executed on the Blidah line; the rest is to be paid in yearly instalments of the same amount. The cost of executing the lines will certainly not, it is alleged, exceed the 55,000,000f set down as the maximum capital to be guaranteed; so that shareholders are certain of 5 per cent. at the least: besides which there is every probability that they will obtain more, inasmuch as the Government engineers calculate the lowest revenue of the line at 2,900,000f; the guarantee of interest is, however, not to take effect until after all the lines shall be completed. On the whole, the Government is considered to have displayed needless liberality in the affair; but, doubtless, behind the gentlemen who have obtained the concession, are some influential personages also interested in it, whom it was anxious to oblige. The Credit Industriel Bank has already notified that it will receive next week subscriptions for the said 55,000,000f, which are to be represented in 110,000 shares at 500f each. An English Company has, it appears, contracted with the company for the execution of the works.

Some French ironworks, it appears, contemplate bringing into use on rather a large scale the iron ore found in Savoy, which is represented to be abundant and of superior quality.

The events in Syria, and the armed intervention of France and other Powers which they seem likely to occasion, have naturally increased the anxiety previously prevailing in the financial world; and the consequence has been a fall in the quotations of the Bourse; not, however, so large a one as might have been expected.

The following is an account of the makets:—

Flour.—At *Paris*, sales have not been active during the past week; and yesterday quotations were 61f to 63f for ordinary per sack of 159 kilogs; 64f to 65f for good; 65f 50c to 66f for superior. These are nearly the same as those of last week; but in the four marks an advance took place, the current worth being 63f; August, 63f 50c to 64f; September, 65f; October, 65f 50c to 66f.

Wheat at *Paris* has, in consequence of somewhat unfavourable weather, slightly advanced, the quotations yesterday being 35f 50c to 38f 50c the sack of 120 kilogrammes, according to quality. Few purchases, however, were made. The provincial markets almost all present a decline; as many as 131 having fallen from 10c to 2f 50c the hectolitre, whilst only 3 present a rise of 25c to 29c, and only 6 have remained unchanged.

Cotton.—Business at *Havre*, in the week ending Friday, was less active, the sales being only 5,113 bales. Prices also fell for most sorts, low New Orleans closing at 85f the 50 kilogs, and very ordinary ditto at 94f. The arrivals of the week were only 721 bales. On Monday and Tuesday of the present week the market was calm, but yesterday it displayed a certain degree of animation. Low New Orleans was 85f.

Coffee.—At *Havre*, in the beginning of the week which ended Friday, a decline of prices caused activity, but the pretensions of holders having increased, the movement was checked. The sales were 2,600 sacks Port-au-Prince for delivery, part at 79f 50c the 50 kilogs in bond, part at 78f; 50 sacks Gonaïves disposable, 83f; 2,800 ditto for delivery, 81f to 82f. 485 sacks Rio not washed, disposable, 75f 25c to 78f; 30 sacks Ceylon triage, 108f duty paid; a small lot of Martinique, 132f ditto; 20 sacks Java, at 114f. A lot of damaged Brazil was also disposed of. The arrivals were about 1,400 sacks. This week, sales have been large: Hayti, 78f to 81f in bond; Rio, 71f to 76f; Guadaloupe, 132f 50c to 135f duty paid. At *Nantes*, last week, nothing at all was done, and this week the sole sales thus far have been various lots of different sorts of damaged. At *Bordeaux*, last week, some small lots of San Yago were sold at 98f and 100f the 50 kilogs in bond. This week, the sole sale has been 170 sacks Guayra at 99f. At *Marseilles*, last week, 580 casks Porto Rico were announced for sale by auction, but beforehand nearly all were taken at 90f to 96f the 50 kilogs. Some lots of Brazil were also sold at 72f to 77f; and some of Mocha, at 110f in bond.

Sugar.—At *Havre*, in the week ending Friday, business was active, and prices rose. 715 hogsheads French West India went at 48f to 49f 50c duty paid, the latter quotation, however, for a bargain under certain conditions; 388 ditto for delivery, 48f 75c to 49f; 45 ditto "usine," part 50f, part at 55f 50c. The only arrivals were 2,060 sacks native from Dunkirk. This week, business has been confined to some small lots of French West India at 48f 25c to 48f 50c: ditto "usine," 54f; and of Havana, 38f 50c. At *Nantes*, last week, about 1,500 sacks Reunion "gros grain" went at 54f to 56f 50c; 200 very common (syrup) for England at 38f; and some small lots French West India at 45f 50c to 51f On Friday evening, 11,000 bales Reunion were taken at 52f, and 1,000 casks French West India at 49f. This week, some rather large sales have been made: Reunion, 52f to 55f; French West India, 49f to 51f; ditto "usine," 60f; Mayotte, 47f. At *Bordeaux*, last week, 902 casks French West India were taken at 48f and 48f 50c; a lot of ditto "usine," at a price kept secret; 5,824 bales Reunion at 52f 50c to 54f; 730 casks Havana, 55f. These quotations of West India and Reunion present an advance. This week, a lot of West India has been taken at 48f 50c, and 1,830 bales Mauritius expected at prices not stated.

Indigo.—The sole sale at *Havre*, in the week ending Friday, was 4 cases Kurpah at 30c above the estimates. There were no arrivals. This week, 13 cases Bengal have been sold at prices not stated. At *Bordeaux*, last week, the sales were 19 cases Bengal, 8 Madras, 7 Kurpah, at quotations previously established. The sales, this week, have been 10 cases Bengal: quotations not given.

Hides.—At *Havre*, in the week ending Friday, 1,320 Buenos Ayres; dry, went at 150f the 50 kilogs duty paid; 1,000 Minas, dry, at 122f, 200 Rio Janeiro, salted, 65f; 72 Martinique, 67f 50c; 1,540 New Orleans about 51f; 3,596 horse salted La Plata, 97f 50c to 100f the 100 kilogs duty paid. The arrivals were between 1,000 and 2,000. This week, a quantity of Entre Rios, salted, have been sold at 80f; and some Monte Video, salted, at 82f 50c.

Wool.—At *Havre*, in the week ending Friday, as many as 150 bales La Plata unwashed went at 1f 20c to 2f 75c the kilog, and 56 bales Chili unwashed at 2f 40c. The arrivals did not much exceed 700 bales. This week sales have been active: Monte Video unwashed, 2f 40c to 2f 85c the kilogramme; La Plata, 2f 20c to 2f 55c; and Buenos Ayres sheepskins, 1f 25c to 1f 55c.

Tallow.—Nothing was done at *Havre*, in the week ending Friday, nor have there been any sales this week. At *Paris*, yesterday, the 100 kilogs were 142f,—a fall of 2f 25c.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. first quality, was 95f the hectolitre; Montpelier of 86 deg., 130f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 130f, and beetroot, first quality, 100f.

St. Petersburg, July 9.

A concession of some commercial importance has been made by the Government;—it is that foreigners may enter the trade guilds on the same terms as natives, and may purchase and inherit property, and enjoy all other rights, with the exception of such as are possessed exclusively by certain nobles and privileged foreigners.

Brussels, July 18.

The Bill for the abolition of octrois (town duties levied at the gates), has passed the Senate, and will soon have force of law. It enacts that in place of the octrois, towns shall receive the net profits of the Post Office, 75 per cent. of the import duty on coffee, and 35 per cent. of the excise on native sugar, brandy, beer, and vinegar. As to the abolition of the octrois, almost every body is agreed in thinking it desirable, inasmuch as they weigh more heavily on the poor than on the rich, and are very costly to collect; but the mode in which they are to be replaced does not meet general approbation, on the ground that each town ought to support its own local expenses whatever they may be, and not take them from a common purse.

COMMERCIAL AND MISCELLANEOUS NEWS.

Yesterday's *Moniteur* contains the promulgation of the Convention between the French and Belgian Governments in reference to the entry of French wines and spirits into Belgium. According to this Convention wines will pay in future an import duty of 31f 50c per hectolitre, and spirits of 50 degrees proof 59f. For every degree of proof above 50 spirits will pay 1f 18c in addition.

Intelligence of a highly important character has been received from Russia. It appears that the Emperor has issued a ukase sweeping away the whole of the disabilities hitherto attaching to foreign subjects trading in that country. We give below a copy of the Imperial ukase:—

Imperial Russian ukase of the 7th (19th) of June, 1860, to the High Executive Senate.

By the manifesto of the 1st of January, 1807, the commercial privileges of foreigners were subjected to certain limitations. Now, however, by reason of the gradually increasing facilities of communiestion, and the rapid development of international commercial relations, such restrictions are out of date. Moreover, too, in most of the considerable European countries, commercial privileges coequal to those of natives are accorded to our subjects as well to all other foreigners. Taking also into consideration the beneficial influence which the more free introduction of foreign capital may exercise upon every branch of national wealth, and being desirous of giving a new proof of our anxious solicitude for the interests of commerce, agriculture, and industrial enterprise in our empire, and being desirous, moreover, of showing to foreign countries just reciprocity, we have deemed it expedient to grant to all foreigners resident in Russia privileges in these respects such as our own subjects enjoy in foreign countries. Hence, and in accordance with the advice of our Council, we command:—1. Foreigners are at liberty to enter into every commercial guild, equally as subjects of the empire, and then to enjoy all commercial rights hitherto appertaining to native subjects. (Sections 77 to 107, Commercial Code.) Note.—Jews, subjects of foreign countries, distinguished by their social and commercial position, may by the existing regulations, viz., by special authorisation of the Ministers of Finance, Interior, and Foreign Affairs, trade and found banking offices by inscribing themselves in the first guild. To such Jews, also, the establishment of manufactories and the acquisition and hire of landed possessions are allowed upon the conditions set forth in this ukase. 2. The habitations and shops of foreigners, and all the lands thereto appertaining, are under the protection of the existing laws. The searching of them, or the investigation of mercantile books, can only take place under conditions precisely the same as are prescribed by the laws in reference to subjects of the same class. 3. Foreigners may purchase, and acquire by inheritance, or by gift, or from the Crown, every description of moveable or immoveable property, with the exception of course of such property as by the laws of the empire can only be held by hereditary Russian nobles or by foreigners who have acquired the rank of nobles. 4. Foreigners, Jews excepted, may by authority delegated to them by the proprietors of inhabited lands, superintend them. They may also hire and hold as tenants, or otherwise upon legal instruments, possessions and lands inhabited or not, with no other restrictions, and upon the same conditions otherwise as are permitted and apply to native subjects.

The *Moniteur* has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month are added:—

The annexed report is dated Calcutta, June 4:—Produce Market.—We have again passed a dull fortnight. There has been no actual demand for any article of export, and transactions have only been effected to fulfil open orders or other engagements. Sugar flat. Saltpetre quiet and declining. Raw silk no demand, drooping. Silk piece goods in neglect. Oil seeds in fair demand. Jute in neglect. In safflower and lac dye more inquiry. Import Market.—There is no material improvement in the position of imports. The dulness previously reported continues almost undiminished. Consumption is limited and prices much about the same. Government Securities.—The stock market continues without animation. The low rate of exchange has induced a few purchases for remitance to London; beyond this European buyers are out of the market, and the limited business transacted is chiefly for local account, or in execution of orders from Bombay and Madras. Money Market.—Money is very abundant both with the banks and in the bazaar, and the Bank of Bengal has found it advisable to reduce its rate 1 per cent. Loans can, however, be obtained outside at lower rates.

The East India and China Association have published their comparative statement of the number and tonnage of ships, both British and foreign, entered inwards and cleared outwards with cargo from and to places within the limits of the East India Company's charter, from the 1st of January to 30th of June, 1859 and 1860. According to the statistics of vessels entered inwards, the port of London shows an increase of 93 vessels, with a capacity of 46,814 tons; the difference between 421 vessels and 285,084 tons in 1859, and 514 vessels and 331,898 tons in 1860. The port of Liverpool also exhibits an increase of 28 vessels, with a capacity of 13,428 tons, the arrivals in 1859 having been 123 vessels and 113,688 tons, and, in 1860, 151 vessels and 127,116 tons. The port of Bristol exhibits a decrease of seven vessels, with a capacity of 3,554 tons, the difference between 20 vessels and 9,660 tons in 1859, and 13 vessels and 6,106 tons in 1860. In the case of the Clyde, also, a decrease is presented of 9 vessels, with a capacity 2,700 tons, the arrivals in 1859 having been 14 vessels with a capacity of 5,977 tons, and in 1860 only 5 vessels and 3,277 tons. The net increase has been 105 vessels with a capacity of 53,988 tons, the difference between 578 vessels and 414,409 tons in 1859, and 683 vessels and 468,397 tons in 1860. The principal increase has been in the arrivals of vessels from Calcutta, China, Ceylon, Singapore, and the Cape of Good Hope.

The export of sherry from Cadiz for the half-year just closed totals 28,729 butts, against 22,859 butts for the same period in 1859, and 15,883 butts in 1858.

A parliamentary return has just been issued of all sums paid for duty on insurance against fire during the past year by each of the fire insurance companies of the United Kingdom. From this document it appears that the payments by the London offices, which reach in the aggregate 940,282*l*, stand as follows, when arranged in the order of their respective amounts:—

DUTY ON INSURANCES against FIRE paid in the YEAR 1859 by LONDON OFFICES.

	£		£
Sun	213,128	Unity	15,492
Phœnix	131,365	Royal Farmers'	12,138

The total duty for 1859 was thus 1,504,271*l*. By the same return it appears that the total amount insured on farming stock (which is exempt from duty) in the United Kingdom was 74,342,336*l*—viz., London offices, 39,492,225*l*; country, 27,862,751*l*; Scotch, 5,915,092*l*; Irish, 1,072,265*l*.

During the month of June the total quantity of coal and coke exported from the various coal ports of Great Britain was, of coal 637,207 tons, and of coke 19,191 tons. Of this quantity, which shows a considerable falling off from the exports of the preceding month, Newcastle exported 169,194 tons of coal, and 5,974 tons of coke; Blyth, 9,591 tons of coal; Sunderland, 107,505 tons of coal, and 1,434 tons of coke; Hartlepool and West Hartlepool, 57,862 tons of coal, and 3,903 tons of coke; Middlesborough, 12,103 tons of coal, and 2,352 tons of coke; Hull, 13,791 tons of coal; Liverpool, 73,666 tons of coal, and 2,921 tons of coke; Cardiff, 76,801 tons of coal, and 292 tons of coke; Swansea, 24,882 tons of coal, and 305 tons of coke; Newport, 15,846 tons of coal, and 112 tons of coke; Llanelly, 6,875 tons of coal, and 1,463 tons of coke; Grangemouth, 6,442 tons of coal, and 64 tons of coke; Alloa, 4,881 tons of coal; Charlestown, 6,946, tons, and Troon 10,190 tons of coal. The quantity of coal and coke shipped to London and other ports in the United Kingdom during the month was 827,692 tons of coal, and 3,039 tons of coke, of which Newcastle shipped 188,867 tons of coal, and 1,588 tons of coke; Sunderland, 150,146 tons of coal; Seaham harbour, 57,585 tons of coal; Hartlepool and West Hartlepool, 106,438 tons of coal, and 231 tons of coke; Middlesborough, 20,180 tons of coal; Swansea, 13,281 tons of coal, and 4,290 tons of culm; Cardiff, 64,347 tons of coal, and 1,193 tons of coke; Newport, 45,191 tons of coal, and 27 tons of coke; Troon, 59,900 tons of coal; Maryport, 34,325 tons of coal; and Whitehaven, 16,478 tons of coal, and 167 tons of culm. The number of vessels engaged in the trade was 7,282, of which 4,672 were engaged in the home and 2,610 in the over-sea coal trade.

An account of the amount of bank notes authorised by law to be issued by the several banks of issue in Ireland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 30th day of June, 1860:—

Name and Title.	Circulation Authorised.	Average Circulation.	Amount of Coin Held.
	£	£	£

The demand continues exceedingly light, and the market is very heavy. Holders were disposed to view the European advices, per steamer Adriatic, in somewhat more favourable light, but the news was unproductive of any beneficial result, and the sales for the two days are confined to 1,200 bales. Prices are nominal. We quote:—

New York Classification.

	Upland.	Florida.	Mobile.	New Orleans and Texas.
	c	c	c	c
Ordinary	7	7	7	7¼
Good ordinary	8¼	8¼	8¼	8¾
Middling	10¼	10¼	11	11¼
Good middling	12¼	12¼	12¼	12¾
Middling fair	12¾	12¾	12¾	13⅜

The arrivals have been from New Orleans, 646 bales; Mobile, 338; Florida, 1,319; Georgia, 1,193; South Carolina, 651—total, 4,147. Total import from 1st to 30th June, 43,331 bales. Total import since 1st September, 424,091 bales. Export from 1st to 30th June, 11,197 bales, against 24,729 in 1859.

New York, July 7.—Dulness is still the most noticeable feature in the market, and the limited demand is confined mainly to the wants of spinners. The sales for Tuesday, Thursday, and Friday, are 1,700 bales.

The slight improvement in cotton noticed at the close of last week was not of long duration. The past week has been uniformly dull, and any little previous advance in price has been lost. The market has relapsed into the depressed state which has prevailed so much this season. Some of our quotations for American are again reduced ⅛d per lb, and with this concession it is not easy to effect a sale. Egyptians are very irregular in price and difficult to move. Brazil are without alteration. East India are heavy and drooping. The sales to-day are 8,000 bales. The market is quiet. The reported export amounts to 18,400 bales, consisting of 11,230 American, 300 Brazil, and 6,870 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The advices from the manufacturing districts, this week, are by no means satisfactory. For shipment to India, very little has been passing; but the China trade is decidedly steady. The operations for the Continent have slightly increased. The home trade, generally, continues in a healthy state, whilst the demand for wool of home growth is still firm, notwithstanding the high rates demanded by the growers. In iron and coals, the operations have been on a restricted scale.

Manchester, July 19.—The market has been for the most part dull, and slightly lower prices have been accepted for the little business which has been done. Notwithstanding discouraging accounts from China, a few considerable transactions appear to have been undertaken for some of the markets of the Chinese seas. There have also been a few buyers at low rates for Bombay; but otherwise, generally, there has been no feature beyond a rather prevalent impression that prices for our staples have yet to undergo some further decline.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

Rochdale.—The attendance at the market was good, and there were many inquiries for goods. Manufacturers are pressed to deliver goods previously contracted for, and to accept further contracts. There seems, indeed, to be considerable anxiety to place orders for winter goods, demand for which has seldom set in so early.

Bradford.—Wool—We have no change from last week to report. The consumption is still considerable, and sales are therefore, of course, made to some extent; but, owing to the high price of the raw material, spinners are altogether unwilling to operate beyond their immediate wants. Pieces—The market is but thinly attended by buyers, and on the whole a general flatness prevails. Yarns—The spinners are generally well employed. A good business is doing for exportation, and moderate sales are made to the home houses. Prices, however, are still far from satisfactory, and are not quotable higher than last week.

Glasgow.—The demand for all classes of wool continues good, and prices are fully maintained. Laid and white Highland are in fair request, and there has been a considerable supply of the new clip come to hand. Laid Cheviots and crosses, especially well washed lots, are scarce and are much wanted.

Leeds.—We have again to report active markets at our cloth halls. Prices rule firm, the stocks are light in the clothiers' hands, and the mills are well employed.

Huddersfield.—We have had a very indifferent market. Prices about the same.

Halifax.—There has been a moderate amount of business done both at the warehouses and in the Piece-hall, and prices of all descriptions of goods, as also those of yarns and wool, are firm.

Leicester.—The manufacturers engaged in the home trade complain that the demand for goods is very inanimate, and that it is scarcely possible to realise the advance which has taken place in wool and yarns.

Belfast.—The demand for linen goods has been inactive, but without change in price.

Birmingham.—The trade of this town is far from active, nevertheless, generally speaking, a fair amount of business is doing. The iron trade is heavy.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, July 3.—FLOUR.—There has prevailed a moderately active inquiry for State and Western flour during the past two days, both for consumption and shipment, but prices have declined about 5 cents per bbl, nevertheless, at which transactions have been to a fair extent. The sales since Friday aggregate 30,200 bbls. Canada flour has been in fair request, but the lower grades closed about 5 cents lower. The sales are 1,050 bbls. The market for Southern flour has been heavy, and prices are somewhat lower on the poorer grades of Baltimore and Georgetown. The sales comprise 3,800 bbls, closing heavily at 6 dols to 7.25 dols for Georgetown, and 5.65 dols to 7 dols for Baltimore. Other kinds are quiet and unchanged. Export from the 1st to the 30th of June, 177,377 bbls, against 56,300 bbls in 1859.

GRAIN.—The demand for wheat was moderate on Saturday, and transactions were comparatively light. Holders were a little more disposed to realise yesterday, however, and, there being a fair demand for local milling purposes, together with a moderately active inquiry for shipment, the sales were pretty heavy, chiefly for export. The aggregate sales since Friday are 180,600 bushels, including 26,000 Milwaukee Club at 1.30 dol to 1.32 dol; 11,500 Chicago spring, 1.27 dol to 1.28 dol; 12,000 winter red Western, 1.40 dol to 1.42 dol; 300 red State, 1.37 dol; and 2,500 white Kentucky, 1.58 dol to 1.60 dol. Of the above aggregate, 128,300 bushels were placed yesterday, including 4,700 white Canada, at 1.44 dol; 16,000 amber Milwaukee, 1.33 dol; 5,000 white Indiana, 1.50 dol; 48,000 Milwaukee Club, 1.30 dol to 1.32 dol; 28,000 Chicago spring, 1.27 dol to 1.28 dol; 12,600 white Michigan, 1.45½ dol to 1.47 dol; and 14,000 winter red Western, 1.39 dol to 1.41 dol. The first lot of new Virginia wheat sold at 1.70 dol. Corn is heavy, dull, and about one cent per bushel lower on all kinds. The sales for the two days have been moderate, amounting to 68,000 bushels. Export of wheat from the 1st to the 30th of June, 813,087 bushels; corn, 903,546 bushels, against 20,515 bushels in 1859.

NEW YORK, July 7.—Flour heavy and rather lower. Super Western, 5.20 dols to 5.25 dols; common to medium extra Western, 5.30 dols to 5.60 dols; inferior to shipping brands, extra ronnd hoop, 5.70 dols to 5.80 dols; Canadian, without material change, at 5.40 dols to 7.50 dols. Wheat heavy and drooping, at 1.27 dol for Chicago spring; 1.30 dol to 1.31 dol for Milwaukee Club. Barley dull; corn a shade better; mixed Western, 63½c to 64c; Western yellow, 65c to 67½c.

EXPORT of BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND, since September 1, 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Unusually small supplies of home-grown wheat have been on offer in the various markets held this week. The business done both in red and white qualities has been limited; nevertheless prices have advanced about 1s per quarter. Full average quantities of foreign wheat have been brought forward; nevertheless, all kinds have been held at extreme rates, and, in some instances, rather more money has been obtained for good and useful qualities. There is no disposition on the part of importers to press sales, either of the fresh arrivals, or of granaried stocks; indeed, whilst the present changeable weather continues, we can hardly anticipate any positive decline in value, even though the importations may continue on a liberal scale. The few samples of barley on show have been disposed of at fully previous rates, and the transactions in malt have somewhat increased. Large quantities of oats have found buyers at quite last week's improvement in value; whilst both beans and peas have continued steady in price. Flour has moved off freely, and the currencies have had an upward endency.

The continental markets have shown more firmness for wheat; but no actual improvement has taken place in the quotations. All spring corn, especially barley, has sold freely at very full prices. The latest advices from the United States are to the effect, that rather large quantities of grain and flour were in progress of shipment to the United States, without having any improving effect upon prices. The quantities of produce coming forward were large for the time of year.

The Scotch markets have been very scantily supplied with wheat; yet the demand has continued restricted, on rather higher terms. Other articles of grain have commanded very full prices.

Throughout Ireland, there has been more firmness in the demand for wheat, and fine parcels have somewhat advanced in price. Oats have realised more money, and the operations in other articles have continued on a liberal scale.

The few samples of English wheat on sale in to-day's market were disposed of at Monday's advance in the quotations. Foreign wheat was firm in price, but the business doing was limited. Barley gave way 1s per quarter, but all other kinds of produce was firm in price.

Mr Ed. Rainford reports the floating trade as follows:—Since the 12th, there has been an exceedingly large influx off coast of grain-laden vessels, amounting to about 284 up to last night, consisting of 77 cargoes of wheat, chiefly from Odessa, the Danube, and the Sea of Azoff; 105 maize, principally from the Danube and Odessa; 10 rye; 84 barley, mostly from the Danube; 7 oats; and 1 beans, from Larache. Of the above, about one-sixth were sold before arrival. Although a fair business has been done this week, yet, considering the very numerous arrivals, there has not been so many transactions as some anticipated; but there is generally a pause under such circumstances for a day or two, some buyers waiting to see the effect on prices, and hoping to buy lower by looking on a little; but there are signs of animation, and it is probable next week a very large business will be done. The cargoes sold are all arrived, and the following prices have been accepted:—Wheat, Odessa Ghirka at 51s 6d to 52s 6d per 492 lbs; Sandomirka at 54s per 480 lbs. Maize, Odessa, a fine cargo early in the week at 31s 4½d; later a few large cargoes at 30s 6d; Galatz, a cargo at 31s, all per 492 lbs; Ibraila, a cargo early in the week at 30s 3d; later cargoes at 29s, 29s 3d, 29s 4d, and 29s 6d per 480 lbs. Barley, Danubian at 25s 6d, 25s, and 25s 3d; Ibraila at 26s, 25s 3d, 25s 6d, and 24s 9d (not quite perfect), per 400 lbs. Oats, Theodosia at 20s 6d per imperial qr. It will be seen that prices of wheat are well sustained, and sellers of maize are firmer, and looking for improved rates.

The London averages announced this week were:—

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 18th day of July, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,711,365	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	15,236,365
		Silver Bullion	...
	29,711,365		29,711,365

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,721,445
Rest	3,382,850	Other Securities	19,419,147
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	3,485,507	Notes	7,535,200
Other Deposits	15,265,312	Gold and Silver Coin	771,478
Seven Day and other Bills	760,601		
	37,447,270		37,447,270

Dated the 19th July, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,236,766	Securities	29,062,592
Public Deposits	3,485,507	Coin and Bullion	16,007,843
Private Deposits	15,265,312		
	41,687,585		45,070,435

The balance of Assets above Liabilities being 3,382,850*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£294,912
A DECREASE of Public Deposits of	634,543
A DECREASE of Other Deposits of	123,623
An INCREASE of Government Securities of	6,871
A DECREASE of Other Securities of	197,421
A DECREASE of Bullion of	224,967
An INCREASE of Rest of	47,737
A DECREASE of Reserve of	497,987

The present Bank returns show that the process of paying the dividends still continues to diminish the Government deposits and the bullion; also that the demand for money still continues, as shown by the decrease of the other deposits, although only to the extent of 123,623*l*, but more especially by the decrease of the reserve to the extent of 497,287*l*.

The increase in the circulation proves that the notes of the Bank are still retained by the public.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,879,962	£ 20,762 319	£ 21,404,110	£ 22,922,859	£ 22,936,766
Public deposits	4,645,191	3,419,956	2,808,843	4,982 572	3,485,507
Other deposits	11,122,418	10 861,098	15,711,905	14,932,995	15,265,312
Government securities	14,285,583	10,596 581	10,587,476	11,270,680	0,721,445
Other securities	10,184 360	16,163 847	15,499,255	17,254,439	19,419,147
Reserve of notes & coin	10,342,472	6,337,652	11,082,307	10,109,687	8,306,978
Coin and bullion	16,910,732	11,840,652	17,212,937	17,699 527	16,009,843
Bank rate of discount	2½ p. c.	5½ p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	96⅞	92	95⅞	94⅞	95⅛
Average price of wheat	42s 4d	63s 8d	45s 3d	46s 6d	57s 7d
Exchange on Paris (shrt)	25 32½ 40	25 22½ 27½	25 5 12½	25 5 12½	25 10 17½
— Amsterdam ditto	12 1½ 1½	11 17 18	11 15	11 12 12½	11 14½ 15
— Hamburg (3months)	13 11	13 8½ 8⅝	13 6½ 7	13 5½ 4	13 5½ ⅜

In 1850, the chief feature in the money market was the fall in the exchanges on Amsterdam, Hamburg, and Paris—the reason being the withdrawal of capital which had been sent to England for safety during the disturbed state of the Continent, and also on account of large purchases of wheat from abroad.

In 1857, the progress of the mutiny in India was most anxiously watched. The Bank rate of discount had been lowered from 6 to 5½ per cent.

In 1858, the best bills were discounted at 2½ per cent. The Queen was about to visit the Emperor of the French at Cherbourg. The adjudication of the New Zealand 4 per Cent. Guaranteed Loan of 300,000*l* had taken place at the reserved price of 107 per cent.

In 1859, the English funds had fallen nearly 1 per cent. The market was principally affected by the fall in the French funds, and the impending pecuniary demands of the Indian Government.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 938,058*l*; in 1857, a deficiency of 5,322,749*l*; in 1858, an excess of 212,650*l*; and in 1859, a deficiency of 2,321,444*l*. In 1860, the deficiency is 4,153,835.

DISCOUNT AND MONEY MARKET.—Notwithstanding the payment of the dividends, the rate of money in the discount market still continues in active demand at 4 per cent., both in Lombard street and at the Bank of England. Some exceptional cases have occurred in which bills have been discounted at a fraction below this rate; but 4 per cent. is the rate at which most bills are taken, and 4½ to 5 and even higher is charged for bills having from three to six months to run. We have no doubt the failures in the leather trade, and the poor dividends which the houses that have failed seem likely to pay, have created in some measure a want of confidence; this, and a very active trade unquestionably going on, accounts for the rate of money on bills of exchange being so much higher than on Government Securities, on which it is not more than 2½ per cent. The rate of money allowed by the discount houses is 3 per cent. at call, and 3½ per cent. at seven days' notice.

The following are the rates of discount at

	Bank rate. Per cent.	Open market. Per cent.
Amsterdam	4	4
Berlin	4	4
Frankfort	2	2
Hamburg	No Bank rate	2
London	4	4
Paris	3½	3 to 3½
St Petersburg	5	5 to 6
Vienna	5	4½

ENGLISH FUNDS.—The transactions in the English funds have during the week been of a most limited nature—the price of Consols has varied from 93½ to 93⅝. There has been a sale to-day of 50,000 Consols for money at 93¼. After the statement of the Chancellor of the Exchequer, that he should meet the estimate of expenses of the China war by increasing the duties on spirits and by making use of the Government balances, Consols became firmer, but they have since receded, in consequence of rumours of a loan being required for fortifications.

It is rumoured in the City this afternoon that the Government will state on Monday the sum intended to be spent on fortifications; but that as it will only be required by degrees, an arrangement will be made with the Bank of England to make advances, until such time as the advances amount to such a sum that a definite arrangement between the Government and the Bank will become desirable, and that then the Bank will either have the option of being paid off, or take the annuity which the Government will offer to redeem the loan in a given number of years at a price to be fixed on. Such an arrangement would render a loan from the public for the present unnecessary. Although nothing is positively known, what gives a degree of probability to the rumour is, that the Bank of England hold a smaller amount of Government Securities, and a larger amount of other securities, which are supposed to consist principally of bills of exchange and will run off, than the usual average.

Great disappointment, not to say dissatisfaction, is expressed in the City at the withdrawal of the Bankruptcy and Insolvency Bills, to the passing of which the commercial world looked forward with so much anxiety.

In addition to the withdrawal of the Bankruptcy and Insolvency Bill, the Savings Bank Bill has also been defeated this evening by a majority of 38.

Great curiosity is also felt among monied circles as to what has become of the Savings Bank deposits, which have not been invested since the last day of December, 1859. Exchequer Bills have been rather firmer this week at 1s to 4s prem. The funds have been very heavy to-day in consequence of rumours of a loan alluded to, and have fallen ¼ per cent., the last price being 93 to ⅛ for money, and 93⅛ to ¼ for the August account.

FOREIGN FUNDS.—Very little business has been transacted in the foreign funds. Turkish Bonds were firm in the early part of the week, owing to the punctuality with which the Turkish Government send their dividends. They close, however, very flat this afternoon, having fallen nearly 1 per cent. since yesterday. Peruvian Bonds have been as high

as 75 for the 3 per Cents., and 95 for the 4½ per Cents., but have since become flatter. Russian stocks have been rather firmer in consequence of a prospectus being issued for a "General Mercantile Bank of St Petersburg," with a capital of 2,000,000*l* sterling, with power to increase it to 8,000,000*l*. This scheme, although introduced under powerful auspices, is not viewed with much greater favour than the Russian loan by the general public—the terms as published in the prospectus being considered as too favourable for the fondateurs.

The closing price of French funds this afternoon is 68f 20c, being a fall of ½ per cent. The rumour is that the French Government will require a new loan in October to defray the expenses of the expeditions to China, and, it is said, of a contemplated expedition to Syria. The loan of nearly 6,000,000*l* sterling for the city of Paris has been sanctioned by a large majority.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :—

RAILWAYS.—The railway market was very buoyant in the early part of the week, and the settlement which then took place showed that the public continue to make investments in these securities, the rate of continuation from account to account being very light, not more on an average than 4½ per cent. The market to-day has been heavy in consequence of the fall in the English funds.

JOINT STOCK BANK AND OTHER MEETINGS.—At the half-yearly meeting of the London and Westminster Bank, Alderman Salomons, M.P., in the chair, the report announcing a dividend and bonus for the past six months at the rate of 10 per cent., equal to 20 per cent. per annum, free of income tax, was carried unanimously. It was stated that the prosperity of the Bank steadily increases. Since the last meeting the amount due to customers has experienced an augmentation of 800,000*l*. The rates of interest in the past six months having been good, the Bank have been able to employ their deposits profitably and safely. The profits exceed any previous occasion, and would have been larger but for the confusion in the leather trade. The Directors have appropriated 10,000*l* to meet any losses from the latter circumstance, but probably not more than half that sum will be required. Considering that the London and Westminster is the only Bank that has a large establishment in Southwark, in the centre of the leather trade, the Directors have wished to make an ample provision against this contingency. In answer to a question, it was mentioned that the 10,000*l* does not appear in the account, and is independent of the 11,222*l* carried forward to the next half-year.

The London Joint Stock Bank has held its general meeting. The net profit realised during the past six months amounts to 62,034*l* 13s 9d, of which 37,500*l* is appropriated to the usual dividend at the rate of 12½ per cent., and the balance, 24,534*l* 13s 9d, carried to profit and loss new account. The current half-year has commenced with the prospect of a considerable loss on bills discounted, in consequence of the recent failures in the leather trade. The extent cannot be accurately estimated at present, in the absence of authentic information respecting the assets of the several insolvent houses, but in the meantime there is reason to believe that the ultimate loss will not exceed 40,000*l*. The guarantee fund, having been debited with 21,250*l* for depreciation since the 31st of December, in the value of Government and Indian securities held by the Bank, and credited with 3,440*l* 11s for six months' interest, now amounts to 211,560*l* 9s 11d. The dividend, free from income tax, will be payable on and after Friday, the 27th instant.

At the half-yearly meeting of the Commercial Bank of London, the report, which shows a net profit of 16,535*l* 13s 4d, after paying all expenses of management and making provision for bad and doubtful debts, was unanimously adopted, and a dividend declared at the rate of 8 per cent. per annum free of income tax, making, with the dividend already paid, 7½ per cent. for the past twelve months. A balance of 551*l* 2s remains to be carried forward to new account, 3,984*l* 11s 4d having to be allowed for rebate on current bills not yet due. The Chairman stated in his remarks that no loss had taken place, nor was any anticipated, from the recent failures in the leather trade.

The report presented at the half-yearly meeting of the City Bank states that, after making provision for bad and doubtful debts, &c., and allowing for rebate on bills discounted not yet due, there remains at disposal the sum of 21,537*l* 17s 9d. A dividend at the rate of 6 per cent. per annum, together with a bonus of 15s per share, was agreed to, making the distribution for the year amount to 7½ per cent. A balance of 8,037*l* 17s 9d remains, which the Directors resolved to hold against any loss that may occur through Messrs Streatfeild, Lawrence, and Mortimore's failure, of whose bills the Company held 50,000*l*, with only a cash balance of 2,000*l*, but the securities were signed by firms who, it is anticipated, will pay from 5s to 20s in the pound.

At a meeting of the English, Scottish, and Australian Chartered Bank, a dividend at the rate of 5 per cent. per annum was declared, and the report was unanimously adopted.

At a meeting of the Union Bank of Australia, a dividend at the rate of 7 per cent. per annum was declared. A fraud to the extent of 9,000*l*, by the cashier in the colony, had been discovered. The Bank holds a bond of security to the extent of 5,000*l*, which is to be enforced.

At the annual meeting of the Life Association of Scotland, held at Edinburgh, the report stated the assurances for the year to have been 531,820*l*, yielding 17,890*l* in premiums. The income is 163,177*l*, and the accumulated fund 495,800*l*.

At the half-yearly meeting of the Mutual Life Assurance Society, Mr Sampson in the chair, the report stated that the number of policies issued during the six months was larger than in any similar period since the formation of the society, and that the amount assured was also larger, with the exception of that in the first half of 1859. The number of

new policies was 119, assuring 66,530*l*. The total income of the Society is 62,000*l*, and the invested assets 353,000*l*.

At a meeting of the Mercantile Discount Company, Mr W. Jesse presiding, the report, proposing a division of profit at the rate of 10 per cent. per annum, free of income tax, was agreed to. A sum of 3,200*l*, gained on the allotment of the 1,280 shares authorised at the last meeting, has been added to the reserve, which now stands at 4,215*l*. There are still 1,000 shares unallotted, but it is proposed to issue them on the same terms as the last—namely, 2*l* 10s premium. The profits of the past half-year were, including 2,272*l* brought forward from the last account, 6,550*l*.

The Scottish Australian Investment Company will recommend at their forthcoming meeting a dividend at the rate of 10 per cent. per annum.

Bullion.—Messrs Pixley, Abell, and Langley's circular gives the following particulars in regard to bullion, the exchange on India, and Indian Government paper:—

Gold.—The Maid of Judah and Eagle have arrived from Australia, bringing together about 256,000*l*. We have also to mention the following additional arrivals:—The City of Washington, from New York, with 130,000*l*; the Hammonia, from New York, with 20,000*l*; the Illinois, from New York, with 20,000*l*; the Asia, from New York, with 110,000*l*; the New York, from New York, with 40,000*l*; the Shannon, from the West Indies, with 41,000*l*. The greater part of these amounts have been purchased for transmission abroad; only 21,000*l*, up to the present time, has been sent into the Bank, but it is not improbable that some further sums may, in the course of the next few days, be also sold to the Bank. The Ceylon, to leave on the 20th inst., takes out 17,418*l* in gold for the East.

Silver.—The Shannon has brought about 113,000*l* from the West Indies. It was found, however, so difficult to place the varied descriptions of bars by her, that a reduction in price had to be submitted to, and the whole amount was sold for the Continent at 61⅜d per ounce standard. Orders for fine quality bar silver, suitable for the China market, have, however, been given, and executed at 61½d to 61⅝d per ounce standard; and the Ceylon will take out about 49,000*l* in bars, the whole of which is for China.

Mexican dollars have been in good demand. We mentioned the price in our last circular as 62⅝d per ounce nominal, but owing to Government and other large orders having come to hand, the price has risen considerably, and we quote business done at 62⅝d to 62½d per ounce. The Hammonia brought 17,000*l* from New York, and the Ceylon, to sail the 20th inst., will take about 220,000*l* in dollars—all for China and the Straits. This amount includes 75,000*l* shipped on Government account.

Exchange on India for 60 days' sight bank drafts remains as at date of our last; Bombay and Calcutta, 1s 11⅞d to 2s 0⅛d; bills with documents, 1s 11d to 1s 11⅛d; Madras, 1s 11⅞d, nominal, for Bank bills.

India Government Loan Notes have again improved; since the 12th instant there has been a rise to 102½ to 103 for 5½ per Cents., and to 97½ to 97¾ for 5 per Cents. Prices are very steady, with a moderate business doing.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 74s per oz, last price; United States gold coin, 76s 3d per oz, last price. Silver—Bar silver, 5s 1½d to 5s 1⅝d per oz std, last price; bar silver, containing 5 grs of gold, 5s 1⅝d per oz std, last price; fine cake silver, 5s 6½d per oz; Mexican dollars, 5s 2⅜d to 5s 2½d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11½d to 4s 11⅝d per oz, last price.

Miscellaneous.—At the half-yearly meeting of the proprietors of St Katherine Docks, a dividend was declared at the rate of 2 per cent. for the half-year. As the net earnings amount to only 38,401*l* 4s 8d, and the dividend will require for its payment 38,796*l*, it will be necessary to supply the deficiency from the rest, which will then amount to 74,833*l* 18s 8d. On this point there was some discussion, a proprietor insisting that, according to the Act of incorporation, the Company could not divide more than it had earned within the half-year. On the other hand, it was contended that the words of the Act prohibiting the Company dividing more than they had earned applied to the gross and not to the net earnings. The reduction of rates, although it brought an increase of business to the docks, yet did not increase the profits, as there had to be an additional amount of labour employed.

It has been officially notified that on the 26th inst. a further call is proposed to be made of 100*l* per share on the proprietors of the London and Eastern Banking Corporation. It was hoped in the first instance that a return of 16*l* per share out of the original 50*l* paid might have been made; but not only has the whole of the share capital vanished, but such holders as have been able have had to meet one call of 50*l* per share, and are now required to pay 100*l* per share more. Branksea Castle, the property of Colonel Waugh, is said not to have realised sufficient to clear off the mortgages.

Notice has been given that 182 bonds of the Imperial Turkish 6 per Cent. Loan of 1854, of 3,000,000*l* issue, negotiated by the late Baron de Goldsmid and John Horsley Palmer, Esq., amounting to 37,900*l* sterling, or 947,500f, have been drawn by lot, and will be paid off at par on the 10th of October next, when the interest thereon will cease.

The amount to be forwarded by the steamer Ceylon to India and China is 290,877*l*, 273,459*l* being silver and 17,418*l* gold. Of this total, 282,579*l* is for China and the Straits, 3,798*l* for India, and 4,500*l* for Alexandria. The Government remits on this occasion 75,068*l* in silver to Hong Kong.

A telegram has been received from China, supposed to have been sent from Hong Kong on the 7th of June. The export of tea is stated at 78,000,000 lbs, showing no increase. Of silk, it was 67,000 bales. The rates of exchange were 4s 10d at Kong Kong, showing no alteration, and 6s 8½d at Shanghai, showing an adverse movement of about 1¼ per cent. Trade at Shanghai is said to be suspended, and the rebels are investing Souchow. As regards the war with England and France, it is added, "the Chinese are resolved to fight."

The Directors of the Great Indian Peninsula Railway Company are prepared to receive loans on debentures of 100*l* and upwards for five or seven years, from the 1st inst., at 5 per cent. per annum interest, payment of both principal and interest being guaranteed by the Secretary of State for India in Council, and the interest payable half-yearly.

The East Indian Railway Company offers for public subscription 1,500,000*l* new 5 Five per Cent. Debentures, having five years to run, with the option of renewal for five years more upon the holders giving one year's notice. The debentures previously issued by this Company, including the 1,600,000*l* in November last, have the option of conversion into stock, but this privilege will not exist in the present instance, the power of renewal being substituted. Applications to be received to the 30th inst. The instalments will consist of 25 per cent. on the 10th of August, and 25 per cent. in each of the succeeding months, or the amount, if preferred, may at once be paid up in full. The total borrowing powers of the Company, including the proposed issue, are limited to 3,000,000*l*. Both principal and interest are guaranteed by the Indian Government.

A meeting of the creditors of Messrs Robert Freeland and Brother, who lately stopped payment, has been held at Manchester, when it was stated that the liabilities were about 85,000*l*, with assets in this country to the amount of about 2s 6d in the pound. There are also other assets of the nominal value of 67,000*l*, represented by goods shipped to the East, the realisation of which is very doubtful. After some discussion, five creditors were appointed a committee of investigation.

The seventeenth report of the Directors of the Ceylon Railway Company contains a correspondence between the Secretary of State and the Directors, in which they state they "are prepared to recommend the shareholders to consent to annul the contract, on being paid off at par," with an alternative proposition that the guarantee should be changed into a uniform 6 per cent. on the entire capital; but it is not obligatory on the colony to accept either of the propositions made by the Directors. The Ceylon Government may determine to abide by the contract as it stands, and it is equally in the power of the shareholders to come to a similar decision. The Company's capital would then remain a 6 per cent. stock to the extent of 800,000*l*, with a liability to raise 1,072,000*l* more, either on shares or debentures, at 5 per cent. The Directors themselves are of opinion that the Company's stock affords a better investment than any Indian railway stock. Besides their interest in the surplus profit of the railway, the proprietors have the guarantee of a very flourishing colony, free from debt, whose revenue has risen in five years from 408,000*l* to 747,000*l*, and appears to be yearly on the increase. By an express provision of the contract, the guaranteed interest is payable "in preference to all other claims upon the revenues of Ceylon, excepting such existing claims thereon, if any, as are now by law entitled to priority," an exception referring

to an old Dutch debt of between 3,000*l* and 4,000*l*, supposed to have a legal preference. Mr Hawkshaw's report adopts and confirms the conclusion of a committee of the Colonial Legislature, that the railway will yield a surplus profit beyond payment of the guaranteed interest on the total outlay.

Mexican dollars —	0 0 0
Silver in bars (standard) —	0 5 1½

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 1-10th per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 109¾ to 109¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; and, after making allowance for charges of transport and difference of interest, the present rate leaves a small profit on the importation of gold from the United States.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The few samples of English wheat on sale at Mark lane, to-day, were taken off slowly; nevertheless, Monday's advance in the quotations was well supported. In foreign wheat—the show of which was good—very little business was transacted, at full prices. Barley, owing to large arrivals off the coast, gave way 1s per quarter. All other kinds of produce, including flour, were tolerably firm. The arrivals from abroad amount to 11,030 quarters of wheat; 1,700 barley; 23,950 oats; 1,390 sacks and 9,660 barrels of flour.

At Liverpool, this morning, the grain trade ruled steady, at about Tuesday's currency.

Messrs Briggs and Co.'s grain circular, dated Alexandria, July 3, says:—

Since our last advices, business in our grain markets has been greatly interrupted by the Bairam holidays. Receipts of wheat, however, have been large, and this on the resumption of business has contributed, together with the scarcity of shipping, to produce a slight decline in prices; but this decline is less apparent in the quotations we give below, owing to exchanges having likewise receded. Receipts of Indian corn are confined to a parcel of 20 ardebs, sold at a price equal to about 29s per quarter, free on board. Barley is firm, but prices vary greatly, according to quality. The following is the usual abstract of sales since our last advices, together with present prices per quarter, f.o b., viz.:—Wheat, Saide, 12,528 quarters, at 36s 2d to 37s 3d; ditto, Behera, 3,238 quarters, at 34s 6d to 36s; beans, Saide, 1,000 quarters, at 26s 6d to 27s 2d; ditto, Behera, 1,859 quarters, at 25s 6d to 26s 3d; barley, 1,272 quarters, at 18s 2d to 20s 10d; lentils, 170 quarters, at 25s 6d per quarter. Freights—Shipping is still very scarce; but the rates of freight since the end of last week are lower, and may be quoted as follows, viz.:—Beans to the United Kingdom for orders, 5s 3d to 5s 6d per quarter, without proportion; wheat, 5s to 5s 9d per quarter; wheat or beans to a direct port, 4s 6d to 5s; to Liverpool by steamer, 5s 6d per quarter.

The sales of the week in the Liverpool cotton market have amounted to 60,000 bales, including 40,000 bales to spinners, 4,000 bales on speculation, and 18,000 bales for export. The market is very feeble, and the quotations of last week have been barely maintained during the present. The quantity offering is still so very great, that plenty of cotton can be had cheap if required, and the stock remains at a very large figure. To-day closes quiet; sales about 8,000 bales without change.

"There is little to be said of fresh interest in regard to the growing crop," observe Messrs Neil and Co., of New York. "From some sections the want of rain is still the subject of complaint, and in some parts of the high lands it is feared the long drought will result seriously. From the greater part of the cotton country, however, the accounts are cheering, and the bottom and prairie lands are said to promise a large yield. On the whole, the prospects thus far are encouraging for a full crop, and though it is yet too early to form predictions on the subject, some parties look for early receipts of new cotton, providing the weather continues favourable."

At Alexandria, on the 3d inst., the cotton trade was somewhat heavy.

We have very little change to notice in the value of tea, and the market has continued very inactive. Advices from China state that one vessel had sailed for England with a cargo of the new crop.

We have received the following report in reference to the tea and silk markets from Hong Kong, under date May 23:—

Canton Silk—The new crop has not yet arrived, but is expected daily. The following are expected to be the opening prices:—Loongkong, 400 to 410 dols; Kumchuck, 390 to 400 dols; Kowkong, 350 to 360 dols. The first crop is reported to be a very scanty one, and in quality inferior to last season's silk. Tea—No transactions have taken place. The report on the few musters of new Tayshans and scented kinds that have as yet been shown is very unfavourable. They show adulteration, and the quality is inferior to last season. It is probable that settlements will be delayed for some time, owing to the high prices asked—viz., for congous, 28 to 32 taels: scented capers, 30 to 34 taels; scented orange pekoes, 32 to 44 taels. Foochow advices are to the 17th inst. In imports only a few small sales had been made. Tea—Settlements since the 27th ult. amount to only 450 chests of congou; common and low at 9 taels to 18½ taels. No new tea had yet arrived. Reports from the country mention the opening of the markets on the Seenchuae and Upper Kishow districts, at prices much above last year, and which will lay the first-class tea down at Foochow at 33 taels short. The quality, it is said, will not be equal to last year, as, owing to scarcity of labour when the picking first commenced, the leaf is in many cases rather too matured. This, if true, will probably affect the appearance or "make," more than the taste or quality. The Ellen Rodger is the only tea vessel in port. Shanghai dates are to the 14th inst. In imports, transactions had been chiefly confined to grey and white shirtings. It is reported that the rebels are again threatening Hangchow. They have succeeded in relieving the besieged city of Nankin and capturing some fortified Imperial posts. The present state of the country has a most injurious effect upon trade. Silk—Since the 28th ult., 2,000 bales have been settled, making the total settlements for the season 64,500 bales. Prices of thrums and long reels were quoted a little easier. Other descriptions show no change. Tsatlee. Nos. 1 and 2, none; ditto, No. 3, 390 to 395 taels; ditto, No. 4, 370 to 375 taels; ditto, inferior, 340 to 360 taels; Taysaams, Nos. 1 and 2, none; ditto, No. 3, 330 taels; ditto, No. 4, 315 taels; ditto, inferior, 300 to 310 taels; thrums, 370 taels; long reels, 300 to 310 taels; skeins, 280 to 290 taels. The weather was favourable for the new crop, which, so far, was favourably reported on; but no musters had yet been received. The total export of silk from China to Europe is 65,011 bales, against 75,840 bales last year, or a decrease for this season of 10,829 bales. Tea—The market is now almost cleared of all sound quality. Settlements for the fortnight amount to only —Congou, Ningchou, 1,700 chests, at 26 to 30 taels; Shanghai, packed,

500 chests, at 15 to 18 taels; pekoe, 300 chests (on native account). Green teas, 3,300 packages. Stocks estimated at 3,000 chests black, mostly rubbish, and 3,000 packages green. The Invincible and the Beverly cleared for London. For New York the Union, unable to fill up. Freights as last quoted. Total export of tea from China to Great Britain is 77,971,500 lbs, against to same time last year 55,702,000 lbs, or an increase for this season of 22,269,500 lbs. To the United States the export is 30,414,900 lbs, against 29,000,600 lbs last year, or an increase for this season of 1,414,300 lbs.

Most descriptions of raw sugar have changed hands to a fair extent, on former terms, although the supply in warehouse is considerably in excess of last year. Refined goods are somewhat firm in price.

Rather large quantities having been on offer, Ceylon coffee has moved off slowly, on rather easier terms. Other coffees, however, have ruled steady.

The annexed report of the coffee trade, dated the 9th ult., has been forwarded by Messrs Volkart, of Ceylon:—

The weather since our last, although broken, has not prevented the prosecution of shipments, the progress in which has been considerable, showing the following results:—

PLANTATION COFFEE.

To Great Britain	cwts 323,182	against last year,	cwts	285,574
Foreign Ports	30,391	—	—	38,763
Australia and India	6,499	—	—	4,922
	360,072			329,259

NATIVE COFFEE.

To Great Britain	cwts 70,792	against last year,	cwts	56,852
Foreign Ports	67,269	—	—	109,578
Australia and India	2,035	—	—	4,508
	140,096			170,938

The Oovah sorts of native coffee are finding their way in rather more freely, of fair, even quality, which scarcely command previous values. There is very little doubt but that the growing crop of native has been considerably damaged by the late drought. We hear of nothing doing in plantation coffee. The weather has been favourable for estates since our last, and the accounts from the higher plantations are encouraging. Plantation coffee, low, 11s 3d; ditto, mountain, 11s 6d to 11s 9d per bhl. Native coffee, unpicked, 41s to 42s; ditto, picked and dried, 44s to 45s per cwt.

The rice market has been extremely quiet, at about previous rates; but currants have advanced 2s per cwt.

The second series of colonial wool sales for the present year commenced on Thursday. The attendance of buyers was good, both home and continental, but the operations of the latter were very limited. Prices ruled, for all descriptions, fully up to the highest rates of last sales. The quantity arrived to date is as follows, viz.: from Sydney, 23,741; Port Philip, 27,511; Van Diemen's Land, 10,527; Adelaide, 4,993; New Zealand, 12,335; Swan River, 1,010; Cape of Good Hope, 9,671; total, 89,788 bales.

The public sales of indigo have gone off slowly this week, at from 3d to 1s per lb beneath late quotations. Of the quantity now passed the hammer (14,014 chests), 5,458 have been withdrawn, and 2,895 bought in, leaving 5,661 chests sold. About 1,000 chests remain for sale. Last lot, 13,114.

Messrs Moran and Co., of Calcutta, report the state of the indigo crop to the 2nd ult. as follows:—

With regard to the prospects of the coming crop, we have to report as follows:—In Dacca, Furridpore, and Mymensingh, the weather has been favourable and the rivers have kept quiet, and manufacturing is progressing rapidly. The plant yields fairly, and these districts have every prospect of a successful season. In Kishnaghur and in one or two Jessore factories bordering upon it, a good deal of land remains unsown in consequence of the prevailing difficulty with the ryots, but upon the lands that are sown the plant is reported generally to be very fine, and there is enough of it to produce, with moderately favourable weather, as much or more than the factories so affected turned out last year. Tirhoot, with its great extent of cultivation, but very little of which was empty twenty days ago, has been suffering seriously from drought. From the North-west provinces complaints are loud that the Khoonties are getting sadly dried up and attacked by white ants, and prospects consequently by no means good. In conclusion, we may observe that we do not think the prospects of the new crop on the whole so good as they were a month ago, but heavy rain now where it is most wanted would improve matters materially; on the other hand, every additional day of the scorching weather which now prevails must doubtless injure a great deal of plant beyond recovery. Exports of indigo from the 1st November, 1859, to the evening of the 31st May:—To Great Britain, 18,832 chests; Havre and Bordeaux, 4,971; foreign Europe, 64; America, 1,410; Gulf, &c., 1,737; sundry ports, 11; total, 27,025.

Owing to the proposal to advance the duties on spirits 1s 11d per gallon, the spirit market has been in an unsettled state. English spirit is now quoted at 12s proof.

Scotch pig iron has moved off slowly, and the price, to-day, for mixed numbers, is 51s 9d. In the value of other metals, very little change has taken place.

The oil market, generally, has continued very inactive. In prices, however, no change of importance has taken place.

Tallow has ruled about stationary. P. Y. C., on the spot, is selling at 53s; for delivery during the last three months, 52s 9d per cwt. Town tallow, 52s 6d net cash.

STATEMENT of TALLOW SHIPPED at ST PETERSBURG.

	1860. casks.	1859. casks.	1858. casks

A monetary report from New York, dated the 3rd inst., says:—"The most noteworthy feature in financial circles, since our last, has been the increased demand, on the part of borrowers, to meet the heavy payments in the shape of dividends and interest falling due on the 1st. Lenders for the moment, as a matter of course, are enabled to obtain better terms, and we are obliged accordingly to advance our quotations full 1 per cent. upon the current rates of this day week. We quote:—

	Per cent. per annum.
Loans on call, stock securities	5 to 6
Do. other good securities	6 7
Prime endorsed bills, 60 to 90 days	5½ 6
Do. 4 to 6 months	6 7
First class single signatures	6 7
Other good bills	7 8
Names less known	8 10

As was to be expected, the bank statement for the last week shows a heavy increase in the loans. The specie reserves tell rather better than was expected, in view of the large shipments of last week; but, on the whole, the returns are not of a character to justify the expectation that money is going to be cheaper."

IMPORTS OF FOREIGN AND COLONIAL WOOL.

COLONIAL and FOREIGN WOOL imported into London, Liverpool, and Hull, from Jan. 1 to June 30, 1859 and 1860, and the total imports, including Bristol, Leith, Grimsby, and Hartlepool.

COLONIAL AND FOREIGN PRODUCE MARKETS

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The market continues firm, and nearly all kinds maintain the recent partial improvemeot, but the general demand is scarcely so active as noticed last week. Moderate supplies have been brought forward, which chiefly found buyers. The deliveries keep very steady, and there is some diminution in the stock. Of West India, 1,255 casks found buyers to yesterday, including some parcels by auction: Barbadoes, 36s to 44s 6d; crystallised Demerara, 45s 6d to 47s 6d. The week's delivery was 5,040 tons, making an increase for home use of 5,420 tons since the commencement of the year, contrasted with 1859. The stock is now 70,300 tons.

Mauritius.—4,659 bags went at previous rates in most cases, but the

low brown sorts are less readily saleable. Grainy sold at 39s to 44s 6d; soft brown, dark heavy to good, 32s to 37s 6d per cwt.

Bengal.—On Tuesday, 2,200 bags chiefly sold: very good to fine Cossipore, 46s to 47s; (16s duty) bought in at 48s per cwt.

Madras.—3,202 bags sold at the full valuations: native brown and yellow, 31s 6d to 36s; soft date kinds, 29s to 30s. Privately, business has been done in Jaggery at 30s 6d per cwt.

Manilla.—2,000 bags clayed have been sold at 36s 9d per cwt.

Foreign.—802 casks 366 brls Porto Rico partly found buyers at full rates: yellow, 41s 6d to 46s 6d; brown and grey, 37s 6d to 41s 6d. 200 casks Cuba were chiefly bought in above the value. 2,107 boxes Havana and clayed Cuba about two-thirds sold: brown, 37s 6d to 40s; low grey to fine greyish yellow, 40s 6d to 44s 6d; fine yellow and strong grey, 45s 6d to 47s; white (18s 4d duty), fine, 53s 6d to 54s. Five floating cargoes of Havana have been sold for the United Kingdom: Nos. 10½ to 12½, 27s 3d to 29s. A cargo of Cuba is reported at 26s 6d per cwt.

Refined.—No alteration has occurred in this market, and the demand is still of a moderate character. Common to middling dry goods quoted 51s 6d to 52s 6d; crushed, 48s to 50s 6d per cwt.

Molasses.—A few sales are reported in West India: Antigua, 17s to 17s 6d; Dominica, 16s per cwt.

Cocoa.—Nothing of interest has been reported by private contract during the week, and the market is quiet. 59 bags St Lucia were taken in at 58s to 60s. 214 bags Bahia partly sold at 54s to 57s per cwt.

Coffee.—Plantation Ceylon has been in steady demand this week, and the public sales have gone off at full prices. The heavy landings last week have caused some addition to the stock on hand, but it is still moderate when contrasted with former season's. 1,950 casks 1,073 barrels and bags nearly all found buyers: fine fine ordinary and low middling, 67s 6d to 70s; middling palish to good, 70s 6d to 79s 6d. 56 casks 3,240 bags native partly sold at 60s to 63s 6d for common good ordinary to superior, and 42s 6d to 54s for garblings. 202 packages Alexandria Mocha were bought in at 75s to 90s. 105 casks 112 barrels 186 bags Jamaica went at 60s to 71s; 201 bags Bahia were taken in at 55s, sea-damaged selling at 54s. A floating cargo of good firsts Rio has sold for a near port at about 59s 3d, and one of St Domingo, price said to be 63s per cwt.

Tea.—There has been no improvement in the demand since last Friday, and the market is now quiet, the latest China intelligence received having exercised little influence here.

Rice.—Transactions have been very moderate, and in some cases at barely previous rates. 1,365 bags Bengal, by auction, partly sold at 12s to 12s 6d for middling to good middling pearly white. Privately, good pinky Madras has realised 11s; middling broken to fine white Bengal, 10s 9d to 13s 9d; Rangoon, 9s 3d to 9s 4½d per cwt.

Imports and Deliveries of Rice to July 14, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	15600	11650	61000	34600
Deliveries for home use	34200	14350	18700	17900
Exported	8190	12630	10900	30200
Stock	45950	70760	94600	41450

Rum.—The increase of 1s 1ld per gallon on rum has not materially affected the market. Holders have evinced rather more desire to realise, and a considerable quantity of Leeward proof sold at 1s 6d to 1s 7d. Demerara quoted 1s 10d to 1s 11d. Some Mauritius has sold at 1s 5½d proof; and common Jamaica, 3s 8d to 5s 2d per gallon. The stock is 28,117 puns 6,714 hhds, against 22,920 puns 6,900 hhds at the same date last year.

Spices.—A great deal of inquiry has prevailed for pimento by the shippers, and sales to some extent are reported by private contract, at 3⅜d to 3½d, which is rather dearer. At auction, 104 bags Singapore black pepper went from 4d to 4½d; 21 bags fair Penang white, 6⅝d. 150 bags common bought in at 6⅝d. 59 cases nutmegs sold steadily at 1s 3d to 2s 3d for low small to good brown, and 9d to 11d for wild. 6 cases mace: low to good middling, 1s 1d to 1s 4d. 4 cases Penang cloves, 1s 2⅝d. 209 bags African ginger sold at 1s to 2s reduction: more or less mouldy, 34s to 36s. 84 barrels Jamaica, 4*l* 7s to 6*l* 16s. 332 cases Calicut, small to fine bold, 70s to 117s. 110 boxes cassia lignea went at barely previous rates, from 85s to 92s per cwt for second and first piles.

Saltpetre.—Some parcels sold since last week at rather lower prices, but the market since became firmer, and there is now a better demand. Bengal has sold irregularly, ranging from 37s to 44s 6d per cwt for low to fine, refraction 18 to 4½ per cent. Particulars are not known of all the business done.

Imports and Deliveries of Saltpetre to July 14, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	7900	10750	6160	9500
Delivered	6800	10030	8070	6250
Stock	4960	3700	4740	4300

Deliveries last week 212 tons.

Cochineal.—491 bags were chiefly sold, and at steady prices: Teneriffe silver, 3s to 3s 3d; black, 3s 8d to 3s 9d: Honduras silvers, low small to good bold, 3s to 3s 9d; blacks, 3s 4d to 4s 9d per lb.

Other Dyestuffs.—Gambier is still very firm. Cutch has been quiet. No further sales are reported in safflower.

Drugs.—The sales yesterday passed off without any material change. Castor oil in some instances slightly recovered the above decline. Camphor has sold at 8*l* 10s per cwt, being higher. More inquiry prevails for shellac.

Sapan Wood.—115 tons Manilla were chiefly bought in at 6*l* to 6*l* 10s per ton.

Metals.—Few alterations have occurred in any description this week, and the market is quiet. Scotch pig iron has receded in value, but is again firmer, mixed numbers being quoted 51s 9d per ton on 'Change yesterday. A few sales are reported in spelter, at 20*l* to 20*l* 2s 6d; a portion at 20*l* 5s per ton. Tin remains firm in Holland, but here the sales have been limited: Straits, 132s per cwt. No change has occurred in copper or lead. 250 tons copper made of old East India coin will be sold at Amsterdam on the 24th instant, each pile to contain about 5 tons.

Linseed.—The market is quiet, and prices remain without material change. By auction, some parcels of East India sold at 49s to 49s 6d for Calcutta; and 51s 6d to 51s 9d per quarter for Bombay. Large supplies of Black Sea and Azoff are off the coast.

Hemp.—Petersburg clean is steady at 29*l* 10s per ton. Manilla has been sold to a limited extent at previous low rates, and holders do not seem anxious sellers. On Wednesday the jute sales went off with rather more spirit. Of 3,440 bales brought forward, 2,340 bales sold at the full valuations: common to fine, 13*l* 15s to 22*l* 5s per ton.

Oils.—Olive is still dull, and the quotations almost nominal at 54*l* to 62*l*. Sperm oil attracts rather more attention, and is worth 94*l* to 95*l*; pale seal, 35*l*; cod, 39*l* per ton. There is a good supply of linseed, and it can be obtained at 28s 7½d, or 29s 3d to 29s 6d for delivery to the end of the year. Rape oil has been almost neglected: foreign brown, 41s 6d; for delivery, 43s 6d; refined, 44s 6d and 45s 6d per cwt respectively. Cocoa-nut has been less eagerly taken: Cochin, 47s to 47s 6d; Ceylon, 46s to 46s 6d. Palm in moderate request at 45s.

Turpentine.—Speculators' parcels of American spirits have sold at 32s 6d, and now 33s per cwt is demanded.

Tallow.—Prices of foreign have continued almost stationary during this week, and the market has been steady, although quiet. Yesterday it was firmer. First sort Petersburg Y. C., 52s 6d to 52s 9d; for delivery in the last three months, 52s 6d to 52s 9d per cwt.

Particulars of Tallow.—Monday, July 16.

POSTSCRIPT. Friday Evening.

Sugar.—The market has been firm. 287 casks Barbadoes, 183 casks Grenada and Jamaica, and 4,832 bags Mauritius found buyers at full prices. 168 baskets strong grey and white Java, 46s to 48s. 1,822 bags grocery Madras: grainy sorts, 42s to 44s 6d; soft grey, 38s to 38s 6d. 1,152 bags native were bought in above the value. The week's business in West India has been 2,348 casks. To-day, a floating cargo of Havana, No. 15 to 15½, sold at 31s per cwt for a near port.

Coffee.—271 casks plantation Ceylon, 296 bags 34 casks native, 28 casks Jamaica, sold at about previous rates. 107 half-bales good small berry Mocha sold at 111s to 120s 6d. 357 cases Neilgherry, 70s to 72s 6d per cwt.

Cocoa.—116 bags Trinidad were bought in at high prices. 100 bags Grenada part sold at 62s to 64s per cwt.

Rice.—5,436 bags Bengal were taken in: fine white, 14s 6d to 15s. Privately, 1,800 bags sold at 14s 6d per cwt.

Sago.—560 boxes bold and medium sold at 16s to 16s 6d per cwt.

Sago Flour.—96 bags were taken in at 17s per cwt.

Spices.—187 cases 132 bags Cochin, and 53 barrels Jamaica ginger sold at previous quotations. 215 cases cassia lignea, mouldy and damaged, 74s to 80s. 61 cases nutmegs and mace sold at former rates. 237 bags pimento were chiefly taken in above the value.

Lac Dye.—286 chests by auction were chiefly bought in.

Lima Wood.—550 tons were bought in at 12*l* per ton.

Oil.—526 casks part sold at 43s 3d to 45s. 500 casks cocoa nut part sold: Cochin, 47s 3d to 47s 9d; Ceylon, 46s to 46s 3d; Sydney, 39s 9d to 45s 6d per cwt.

Tallow.—Town and foreign unaltered. 294 pipes South American by auction part sold at 50s 6d to 53s per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very inactive this week, and closes heavily. From Holland the prices for Dutch crushed remain without any alteration for present delivery. About 300 tons of B. & H., No. 1, are reported to have been sold at 32s 9d in barrels for delivery in September next. Some few sales have been made here at 32s 6d in barrels, f.o.b. in Holland, of B. & H. No. 1, and V. O.; also about 40 tons of R. B. Belgian crushed at 32s in barrels, f.o.b. at Antwerp.

Green Fruit.—The sale of West India pine apples continues brisk; 10,000 sold by Keeling and Hunt at public sale, per Vigilant, went at full prices. Shipments of lemons from Sicily being resumed, a good supply has been received by steamers, and has caused a reduction in price for this description, as well as Lisbon. Nuts of all kinds dull.

Dry Fruit.—In consequence of telegraphic advices from Patras received this week, an advance in prices of currants has taken place, and nearly 1,000 tons has changed hands. Holders are very firm, and the market enjoys an appearance of strength it has not had for many months. With the exception of a few retail transactions in Valentias, there is no activity in the raisin market. Reports from Denia of the 14th represent the damage done to the grapes by scorching as very trifling. The crop will be an early one, but there are no preparations for shipping yet visible.

Flax.—The stocks of Russian are small here. A few sales of fine Riga at full rates.

Hemp.—Our market firm without much business doing. A few cargoes are landing of new Russian.

Cotton.—Sales of cotton wool from Friday, 13th July, to Thursday, 19th, inclusive:—1,250 bales Surat, at 3d to 4¼d for very middling to good fair Dhollera; 750 bales Madras, at 4¾d and 5d for fair and good fair Tinnivelly. A steady demand has prevailed, and a fair amount of business has been transacted. Prices continue the same as last week, with the exception of good fair Tinnivelly, which has declined about ⅛d to ¼d per lb. 258 bales Surat and 125 sawginned are advertised for public sale on Thursday, 26th inst.

Silk.—Since the arrival of the mail, the market has been rather better, but without change in price.

TOBACCO.—There has been an active business during the past week at current prices.

LEATHER AND HIDES.—During the past week, the excitement in the trade has still further subsided, and some revival in the demand for leather has taken place. At Leadenhall, on Tuesday, no further decline beyond the reduction of 1d or in some cases of 1½d, which took place in the previous week, could be quoted. The articles that have met the greatest inquiry are good light English butts, good common dressing hides, which are in small supply, shaved hides, and calf skins. Market hides have been in moderate supply, with very slight variation in prices: they continue, however, cheap in comparison with foreign raw goods, 150 of which, heavy Buenos Ayres hides, have been sold this week at 7½d, 825 ditto cow at 7d, and 700 Rio Grande at 7¼d. At the public sales this week of Cape goat skins, 100,000 were sold at prices fully equal to the previous sale three months ago, with a slight advance on the lightest descriptions. These facts indicate a greater amount of returning confidence than might have been expected, but it is no doubt in some degree aided by the consideration that the larger portion of the losses occasioned by the recent failures will fall on the dealers in money—bankers and bill-brokers—not on the dealers in leather.

METALS.—The metal market presents little matter of interest, business being very limited. Copper is firmly maintained in prices, and foreign is well inquired for, but English is in limited demand. The ore market keeps firm. Iron does not rally, the market for all descriptions continuing quiet. Tin keeps high in prices, with steady demand. Lead is rather lower in price, from continued slackness of inquiry. Spelter is without change. Tin plates keep steady.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	55	0
Fat by ditto	2	9½
Yellow Russian	54	3
Melted stuff	38	6
Rough ditto	22	6
Greaves	18	0
Good dregs	7	0

Imports this week 1,791 casks.

PROVISIONS.

There is a good demand for fine bacon, both Hamburg and Irish, and a slight tendency for higher prices: the most in demand is Denny's Irish and Koopman's Hamburg. Other shippers are not so much inquired for. The quality of Friesland this week very indifferent; other sorts are as bad in proportion, owing mostly to the extraordinary weather.

METROPOLITAN CATTLE MARKET.

MONDAY, July 16.—The total imports of foreign stock into London last week amounted to 12,739 head. In the corresponding week in 1859 we received 9,059; in 1858, 7,883; in 1857, 9,434; in 1856, 9,959; in 1855, 6,169; and in 1854, 6,057 head.

The general show of beasts was on the increase, and we observed a slight improvement in the condition of the stock. Prime Scots, crosses, &c., were in fair request at full prices. Otherwise the beef trade ruled heavy at 2d per 8 lbs less money. There was a considerable increase in the supply of sheep. Downs and half-breds were in moderate request at previous rates. All other breeds were dull, and quite 2d per 8 lbs lower than on this day se'nnight. We have to report a slow inquiry for lambs at from 5s 8d to 6s 8d per 8 lbs, being lower rates. Calves were in moderate supply and fair request at full prices.

SUPPLIES.

	July 19, 1858.	July 18, 1859.	July 16, 1860.
Beasts	4062	4150	4140
Sheep and Lambs	25900	29850	29200
Calves	742	284	309
Pigs	360	320	390

THURSDAY, July 19.—To-day's market was very scantily supplied with beasts. Prime breeds sold steadily, at quite Monday's currency. Otherwise, the beef trade was in a sluggish state, on former terms. The show of sheep was seasonably good. Downs and half-breds were in request, at full quotations; but other kinds were a slow inquiry on former terms. We had a fair sale for lambs, the supply of which was moderate, at previous rates. Calves were firm in price, with a steady inquiry.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	8	4	0	Prime Southdown sheep	5	4	5	6
Second quality ditto	4	2	4	6	Large coarse calves	4	6	5	0
Prime large oxen	4	8	5	2	Prime small ditto	5	2	5	6
Prime Scots, &c.	5	4	5	8	Large hogs	4	0	4	6
Coarse and inferior sheep	3	10	4	2	Small porkers	4	8	5	0
Second quality ditto	4	4	4	8	Sucking calves...each	21	0	23	0
Prime coarse-woolled do.	4	10	5	2	Quarter old store pigs	23	0	30	0

Lambs, 5s 8d to 6s 8d.

Total supply—Beasts, 796; sheep and lambs, 11,300; calves, 480; pigs, 300.
Foreign supply—Beasts, 370; sheep, 1,900; calves, 320.

NEWGATE AND LEADENHALL.

FRIDAY, July 20.—The supplies of both town and country-killed meat are on the increase, and the trade generally is heavy, on lower terms.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	3	2	3	10	Mutton, inferior	3	8	4	0
Middling ditto	4	0	4	2	— middling	4	2	4	8
Prime large	4	0	4	6	— prime	4	10	5	2
Prime small	4	8	4	10	Large pork	4	0	4	8
Veal	4	0	5	2	Small pork	4	10	5	2

Lamb, 5s 0d to 6s 10d.

HOP MARKET.

BOROUGH, Monday, July 16.—The reports received from the plantations this morning are much worse. The vermin generally has increased, and the black bine has gone back. The trade is very brisk, and prices have advanced to the following quotations:—Mid and East Kents, 90s, 112s, 147s; Weald of Kents, 77s, 95s, 112s; Sussex, 75s, 92s, 98s.

FRIDAY, July 20.—The accounts from the plantations much worse; the greater portion of Mid and East Kent and Worcester are fast going into blight. The market is very active at advancing prices. Duty, 135,000*l*.

POTATO MARKET.

BOROUGH AND SPITALFIELDS, Monday, July 16.—Increased supplies of both English and foreign potatoes have been on offer since our last, in excellent condition. A steady business is doing, at prices varying from 160s to 200s per ton. Last week's imports, 1,441 baskets from Antwerp, 4,107 from Rotterdam, 19 from Hamburg', 1,200 from Dunkirk, and 132 boxes from Oporto.

WATERSIDE, Thursday, July 19.—Moderate supplies of new potatoes in fair condition have come to hand since our last report. Trade is good at from 8s to 10s per cwt.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* 0s to 5*l* 5s; new ditto, 2*l* 15s to 4*l* 4s; old clover, 4*l* to 6*l*; new ditto, 3*l* 10s to 4*l* 18s; and straw, 1*l* 16s to 2*l* 5s per load. A moderate demand.

CUMBERLAND.—Old meadow hay, 3*l* 5s to 5*l* 5s; new ditto, 2*l* 15s to 4*l* 4s; old clover, 4*l* to 6*l*; new ditto, 3*l* 12s to 4*l* 16s; and straw, 1*l* 18s to 2*l* 6s per load. Trade steady.

WHITECHAPEL.—Old meadow hay, 3*l* to 5*l* 5s; new ditto, 2*l* 15s to 4*l* 4s; old clover, 4*l* to 6*l* 6s; new ditto, 3*l* 15s to 5*l*; and straw, 1*l* 16s to 2*l* 5s per load. A slow sale.

COAL MARKET.

FRIDAY, July 20.—Wall's-end:—Acorn Close 17s 6d—Riddell's 16s 6d—Hartlepool 18s 6d—Kelloe 18s—Hastings' Hartley 16s—Howard's Hartley 15s 9d. Ships at market, 21.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 20.—Although the business doing is not to any considerable extent, still the transactions prove of sufficient amount to keep stocks of all useful kinds from increasing, and prices are consequently well maintained, with here and there a tendency to advance.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 20.—Grain market steady. Wheat in fair request at full prices. Flour steady. Indian corn in moderate demand, and steady at ate decline. Oats and oatmeal dull.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 20.—There is little or no change to report in the market for manufactured iron during the past week; there exists, however, a fair demand for the better descriptions of iron. In Scotch pig iron the business has been principally confined to a few speculative transactions, and prices have slightly receded. The copper market continues inactive at previous rates. Other metals remain almost unaltered.

The Gazette.

TUESDAY, July 17.

BANKRUPTS.

F. B. J. Reed, Leadenhall market, and Upper North street, Bethnal green, butcher.
J. G. Sullivan, Blackman street, Southwark, boot manufacturer.

A parliamentary return has just been issued of the exports and shipping of the twelve principal ports of the United Kingdom for the year 1859. The following is the declared value of British and Irish produce and manufactures exported from the respective ports to foreign countries and British possessions abroad in the year 1859:—

	£
London	30,235,924
Liverpool	62,414,341
Hull	12,980,587
Bristol	457,583
Newcastle	1,006,514
Southampton	2,499,369
Leith	872,673
Glasgow	5,394,376
Greenock	1,106,268
Dublin	48,270
Cork	168,252
Belfast	141,175
Aggregate of the twelve ports	118,325,302

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending July 7 amounted to 552,760*l*, and for the corresponding week of last year to 506,990*l*, showing an increase of 45,770*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 244,893*l*, and for the corresponding period of 1859 to 223,536*l*, showing an increase of 21,357*l*.

LONDON, BRIGHTON, AND SOUTH COAST.—It appears that the accounts of this company for the past half-year were made up on Saturday, and submitted to the Board, and that they have decided upon recommending the payment of a dividend for the half-year ending the 30th June of 2*l* 10*s* per cent. on the consolidated stock of the company.

GRAND TRUNK OF CANADA.—At the meeting of the shareholders held in London on the 30th March last, a statement was submitted showing that, in addition to the preference capital, 1,500,000*l* was required to pay off the then existing liabilities of the company, and to provide such further station accommodation, rolling stock, &c., in Canada as were needed to enable the company to work efficiently and economically the anticipated traffic. Authority to raise this amount was subsequently given at the meeting of the company held in Montreal on the 23rd of May last, but the directors had not as yet been able to put it in force. As regarded the recent subscription for the Second Preference Bonds to complete the amount of the original Government loan, only 84,000*l* was subscribed for by the public (producing about 66,000*l* sterling), which was applied to the payment of pressing and unavoidable engagements.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, July 16.—The railway market improved to-day. The progress of the settlement showed that the public have been steadily buying during the last account, and stock was consequently in many cases scarce for transfer. Midland was prominently good, the final quotation being 1¼ per cent. higher than on Saturday. In the colonial market, East India advanced to 99¾ to 100½; Grand Trunk of Canada left off at 28 to ¼ the ordinary stock, 53 to 55 the debentures, and 91 to 92 the preference ditto. Foreign shares generally closed without change. Mines were inactive, and several descriptions were quoted lower. In joint stock bank shares, Union of London were dull at 26 to ½.

TUESDAY, July 17.—The railway market continued very firm, from the general scarcity of stock. In the case of London and North-Western, Lancashire and Yorkshire, and Midland, the supply was especially short. Great Western was exceptionally flat, on the immediate opening of the competing South-Western line to Exeter. The transactions were large, but the general tone was good, and most of the leading stocks closed higher than yesterday. In the colonial market, Atlantic and St Lawrence shares receded, while an improvement occurred in Ceylon. East Indian railway debentures were flatter on the announcement of the new issue, and Grand Trunk of Canada declined to 27¾ to 28¼. Foreign shares were steady.

WEDNESDAY, July 18.—In the railway market the principal feature was a rise of ¼ per cent. in Lancashire and Yorkshire stock, which was in good demand, owing to a reported large increase in the forthcoming dividend, and to the continued augmentation in the traffic. Other stocks were also firm, especially during the later hours of business. In the colonial market, Grand Trunk of Canada recovered to 28 to ½, and East India Railway stock was steady at 99¾ to 100¼. In foreign descriptions, Brazilian shares were less firm.

THURSDAY, July 19.—The railway market continued firm in character. The colonial market was generally steady, except East Indian stock and Ceylon shares, both of which showed a slight reduction. In foreign railways, Brazilian descriptions, Great Luxembourg, and South Austrian and Lombardo-Venetian were heavy. Dutch Rhenish again improved. In American railway securities the shares of the New York and Erie advanced. Mines were dull, and occasionally lower.

FRIDAY, July 20.—The dealings in the railway share market were on a very limited scale, and the variations in prices unimportant. For the foreign and colonial undertakings there was scarcely any inquiry. Joint stock bank and miscellaneous shares remained at about previous values.

The Economist's Railway and Mining Share List.

FREDERICK DENT,
Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER
TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer,
Mr WHITE, 228 Piccadilly London.
Price of a single Truss. 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to ohn White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE
CAPS, &c., for VARICOSE VEINS, and all cases o WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price rom 7s 6d to 16s each; postage, 6d.
WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE MEDICINE.—
For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.
DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 86,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.
At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most infeebled. We extract a few of many thousand cures:
Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn Norfolk.——Cure No 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.
Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 35s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. 181 Piccadilly, London; Abbis, 60 Gracechurch street and of all grocers and chemists.

TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.
CONTENTS.
INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases
Consultations from 10 till 11 3, and 6 till 6. Sundays from 10 till 1.

DINN EFORD'S
PURE FLUID MAGNESIA
has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

SAUCES.—CONNOISEURS have Pronounced LEA and PERRINS' "WORCESTERSHIRE SAUCE" one of the best additions to Soup, Fish, Joints, and Game. The large and increasing demand has caused unprincipled traders to manufacture a spurious article; but the "GENUINE" all bear Lea and Perrins' name on Bottle, Label, and Stopper.

Sold by Crosse and Blackwell, London, and all respectable Oilmen and Grocers. Sole manufacturers—Lea and Perrins, Worcester.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will hencetorward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858." 6 Edwards street, Portman square, London.

NOTICE.—The Steamers call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and her Majesty's mails. From SEMLIN to SISSEK, Thursday morning.
From SISSEK to SEMLIN, Monday morning.

For further information apply to Messrs PIETRONI and DRAPER, 81 London Wall, E. C.

SEWELL AND CO., are now selling a large lot of FURNITURE CHINTZES, at very reduced prices, with a Manufacturer's Stock of Rich Swiss Curtains; also a large quantity of beautiful Tapestries, adapted for drawing, dining-rooms, and libraries, at one-third less than the usual prices.

COMPTON HOUSE, SOHO.

A TOILETTE REQUISITE FOR THE SUMMER.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instruction on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

HOLLOWAY'S PILLS.—Biliousness, Diseases of the Liver.—After the long continued wet weather, the hot summer's sun will cause the atmosphere to be surcharged with deleterious exhalations, which will produce fevers and irritation of the bowels. To check the undue action of the liver, usually the first indication of febrile complaints, the Pills invented by Professor Holloway stand unrivalled. These Pills are so cheaply and easily purchased that none need suffer either from nausea, indigestion, disordered liver, dizziness, or torpid bowels, or, in a word, from any functional irregularity. These Pills produce a happier effect on the digestive organs than any other medicinal compound, whether mineral or vegetable. By their means any person can easily secure robust health.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH

is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

TRADE MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—The LANCET states, "This is superior to anything of the kind known."—The most wholesome part of the best Indian corn, prepared by a process patented for the Three Kingdoms and France, and wherever it becomes known obtains great favour for Puddings, Custards, Blancmange; all the uses of the finest arrow root, and especially suited to the delicacy of Children and Invalids.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Manchester, Dublin, and London.

SEQUELIN'S OIL.—This vegetable preparation is most successful as an instantaneous restorative, strengthening weak hair, opening pores of the skin, most effectual in the growth of hair and eyebrows, &c., preventing its falling off, curing the scurvy, giving also brightness, softness, and keeping its natural colour, and checking the most obstinate baldness in two months. One bottle is sufficient. Price one guinea. Sold by S. Sequelin, 40 Wharton street, Lloyd square, W.C. Depot, G. Jozeau, 49 Haymarket; Metcalfe, Bingley, and Co., 131 Oxford street. The most satisfactory testimonials shown upon application.

ALLEN'S PATENT PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand London

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured in Mahogany, Birch, Walnut-tree woods, Polished Deal and Japanned [illegible] with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture Manufacturers 196 Tottenham court road W.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen at the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha[s] induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vendor. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed "G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

ALLSOPP'S PALE OR BITTER ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the March Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William st. City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	St Vincent street.
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the labels can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

HEAD OFFICE—No. 9 ST ANDREW SQUARE, EDINBURGH.

ESTABLISHED 1815.

This Society is constituted on purely Mutual principles. The Members (Policy-holders) alone form the Society, there being no Proprietary Body (Shareholders) controlling its affairs and participating in the Profits arising from the Contributions of the Members. The whole funds belong to the Assured, and the profits are divided among them alone.

These principles have found very extensive acceptance in the past operations of this Society, having been applied in such a way as to afford the amplest returns to the members, while, at the same time, careful regard has been had to the establishment and preservation of that unquestionable security, which is essential in the business of Life Assurance.

The Realised and Invested Funds at 31st December last Amounted to

THREE MILLIONS FIVE HUNDRED and EIGHTEEN THOUSAND TWO HUNDRED and THIRTY POUNDS,

which exceeded the whole Liabilities, and yielded a Surplus Fund of

NINE HUNDRED and NINETY-TWO THOUSAND SIX HUNDRED and THREE POUNDS,

out of which there was reserved as a Guarantee Fund

THREE HUNDRED and THIRTY THOUSAND EIGHT HUNDRED and SIXTY-EIGHT POUNDS,

and the remainder of this Surplus Fund

(Less an unappropriated Balance of £11,360), amounting to

SIX HUNDRED and FORTY-NINE THOUSAND EIGHT HUNDRED and SIXTY-SEVEN POUNDS,

being divided among the Members according their respective rights, yielded a

BONUS of from £1 12s 6d to £3 6s per cent. per annum on the original sums assured,

besides providing a prospective Bonus upon an increased ratio for such policies as shall become claims prior to next division of Profits, all which taken together are equivalent to

An AVERAGE BONUS of £2 5s 8d per cent. per annum, one of the largest Bonuses ever declared by any office.

Viewing the Policies of the SCOTTISH WIDOWS' FUND simply as Investments for Money, a Table, attached to the Report read at the Annual General Meeting of Members held on 25th May, 1860, shows the lowest Bonus declared (on Policies newly opened) to be 58¼ per cent., and the highest Bonus (on the oldest Policies) to be 111 per cent. of the Premiums paid. Thus, in the latter case, more than the whole premiums paid have been added in bonuses, the interest alone has been more than sufficient to provide the original sum assured.

For example:—

	£	s	d
A. B., aged 33, opened a Policy in 1819, for	1,000	0	0
There has been added as bonuses	1,262	1	5
Present amount of Policy	2,262	1	5
Deduct from this amount the Principal of the whole Premiums paid	1,136	0	7
The difference shows the Amount of Insurance purchased by the Interest alone	1,126	0	10

Being an improvement of Money which may challenge comparison with many other modes of investing sums of small amount, the advantage of an assured sum in the event of death at any time after the commencement of the Policy being also secured.

The Substantial Benefits accruing under the Society's System are not confined to a favoured class of Policies, but are proportionally distributed among the whole body of Assured Members.

New Entrants may safely rely on the continuance of a Scale of Bonus as ample as that which has hitherto prevailed, because, irrespective of a permanent guarantee fund, the margin of Profit in the Premiums payable, which forms the main index of any Life Assurance Society's Bonus-giving power for the future, remains wholly untouched in the additions hitherto declared.

The magnitude and select character of the Business,—the very small average of Expenses of Management,—the favourable rate of mortality and interest,—and all the other elements productive of Surplus, are therefore combined in the position and prospects of the Society, and afford inducements and guarantees to intending Assurers of the most satisfactory kind.

The Directors, in terms of the Constitution and Bye-Laws, afford to Members every facility and privilege consistent with due regard to the general interest of the Society.—In particular—

(1.) Declared Bonuses may be surrendered for present cash, or applied in reduction of future Premiums, the right to share in subsequent Divisions on the Sums remaining Assured not being thereby lost.
(2.) Surrender Value is allowed upon every discontinued Policy, although no more than One Premium has been paid.
(3.) When Policies attain the value of £50, Loans are made to Members without expense, and at a medium rate of interest, as upon first-class securities.
(4.) Members are permitted to Travel and Reside in any part of the World, either without charge, or subject to moderate extra rates of Premium suitable to the risk.
(5.) In the Settlement of Claims, the wishes and convenience of parties are carefully attended to, and the full sums due are made payable without charge in any part of the Kingdom.
(6.) Members are allowed, without any Extra Charge, to serve in Volunteer Rifle and Artillery Corps, within the United Kingdom.

Reports, Prospectuses, Forms of Proposal, and all information, will be promptly supplied from the Head office and Agencies.

June, 1860. SAMUEL RALEIGH, Manager.

LONDON HONORARY BOARD.

George Young, Esq., Mark lane.
Charles Edward Pollock, Esq., Barrister, Temple.
David Hill, Esq., East India House.
John Murray, Esq., Publisher, Albemarle street.
Samuel Lang, Esq., M.P.
Sir John Thomas Briggs, Admiralty.
Leonard Horner, Esq., Home Office.
James Anderson, Esq., Q.C., Lincoln's Inn.

AGENTS FOR LONDON AND THE SUBURBS.

CENTRAL AGENT.
Hugh M'Kean, 4 Royal Exchange buildings, Cornhill.

DISTRICT AGENTS.
Major R. S. Ridge, 49 Pall Mall, Agent for the West-end District.
James Harris, 38 St George's square, Belgrave road, Pimlico.
Benton Seeley, Islington green, Agent for Islington District.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

ENGRAVING AND PRINTING.

HENRY BRADBURY AND CO.,

BANK-NOTE MANUFACTURERS,

FOREIGN, ENGLISH, AND COLONIAL;

Designers, Engravers, and Printers of Bonds, Coupons, Bills of Exchange Cheques, Certificates, Drafts, Shares, &c.

MERCHANTS and BANKERS are respectfully informed by HENRY BRADBURY (late of Whitefriars), that the Business of BANK-NOTE ENGRAVING and PRINTING, which, under his personal direction, has hitherto been carried on by Messrs BRADBURY and EVANS, is now conducted by a separate Firm under the title of HENRY BRADBURY and CO.

"TIMES' City Article, January 28, 1860:—" A Series of Specimens of Bank-Note Engraving of a very remarkable character has just been issued by Mr Henry Bradbury, who has spent some years in perfecting that art. Apart from their beauty of design and finish, they present the essential advantage of being producible only by machinery so costly and so complex as to prevent all chance of successful forgery."

*** The above Specimens may be had upon application.

OFFICES: 12 and 13 FETTER LANE, FLEET STREET, E. C. (Facing Her Majesty's Record Office.)

CHARTERED MERCANTILE BANK

of INDIA, LONDON, and CHINA.

H. W. D SAUNDERS, Secretary.

BANK OF NEW SOUTH WALES

(Established 1817, Incorporated by Act of the Colonial Legislature in 1850, and confirmed by Her Majesty in Council), 37 Cannon street, City.

The Board of Directors GRANT LETTERS of CREDIT, payable on demand, and BILLS of EXCHANGE, at 30 days' sight, on the undermentioned Establishments of the Corporation, at the rate of £101 for every £100 sterling paid here.

NEW SOUTH WALES.

Sydney	Bathurst	Rocky River
Maitland	Albury	Deniliquin
Newcastle	Mudgee	Adelong
Brisbane	Tamworth	Windsor
Ipswich		

VICTORIA.

Melbourne	Ballarat	Ararat
Geelong	Sandhurst	Tarrangower
Kyneton	Beechworth	Wangaratta
Castlemaine	Chiltern	

And also on the Commercial Bank of Van Diemen's Land at Hobart Town and Launceston.

The Directors also negotiate approved Bills of Exchange, and send them for collection, drawn on any of the Australian colonies and New Zealand.

The Royal Bank of Scotland, Stuckey's Banking Company, the Manchester and Liverpool District Bank, the North and South Wales Bank, and the National Bank in Ireland are authorised to grant credits on this Bank at the several establishments in Australia, and will negotiate bills drawn on the Australian colonies.—By order of the London Board,

JOHN CURRIE, Secretary.

TWENTY-THIRD REPORT of the DIRECTORS of the

COMMERCIAL BANK OF LONDON,

for the Half-year ending 30th June, 1860.—At an Annual General Meeting of the Shareholders, held at the Banking House, Lothbury, on Tuesday, the 17th July, 1860—

DIRECTORS.

Mark Hunter, Esq., Chairman.

John Alfred Chowne, Esq.	Robert Stacey Price, Esq.
James Clay, Esq., M.P.	John Savage, Esq.
George Clive, Esq., M.P.	Herbert Taylor, Esq.
Jonathan Hopkinson, Esq.	Joseph Thompson, Esq.
Wm. Jackson, Esq., M.P.	Thomas Winkworth, Esq.
Sir Joseph Paxton, M.P.	

MANAGER—Mr Alfred Richard Cutbill.

SOLICITORS—Messrs Upton, Upton, and Johnson, and Messrs Norris and Son.

Present—Forty-five Proprietors.

The advertisement calling the meeting was read, and afterwards the following

REPORT.

The balance sheet for the half-year ending 30th June last, which the Directors have now to submit to the shareholders, shows a net profit (including £1,285 4*s* 3*d* brought forward from last account) of £16,535 13*s* 4*d*, after paying all expenses of management and making provision for bad and doubtful debts.

The Directors are therefore enabled to recommend a dividend for the half-year ending 30th June last, at the rate of £8 per cent. per annum, free of income tax, making, with the dividend already paid, 7½ per cent. for the past twelve months.

After payment of this dividend, which will require £12,000, there will remain a balance of £551 2*s*. to be carried forward to new account; £3,984 11*s* 4*d* having been allowed for rebate on current bills not yet due.

The dividend will be paid on and after 28th inst.

In compliance with the provisions of the deed of settlement, the following Directors, viz.:—

John Alfred Chowne, Esq.,
Jonathan Hopkinson, Esq.,
Joseph Thompson, Esq.,

retire from office, but being eligible, offer themselves as candidates for re-election.

July 17, 1860.

COMMERCIAL BANK OF LONDON.

BALANCE SHEET TO 30TH JUNE, 1860.

The report and balance sheet having been read,

It was resolved,—That the report and balance sheet just read be approved, printed, and circulated amongst the proprietors.

The Chairman, Mark Hunter, Esq., on the part of the Directors, declared a dividend on the paid-up capital of the Company at the rate of £8 per cent. per annum for the past half-year, free from income tax, payable on and after Saturday, the 28th instant.

Resolved,—That the following Directors, viz.:—

Joseph Alfred Chowne, Esq.,
Jonathan Hopkinson Esq., and
Joseph Thompson, Esq.,

who go out of office in pursuance of the deed of settlement, be re-elected Directors of the Bank.

Resolved,—That the thanks of this meeting be presented to the Chairman and Directors for their attention to the affairs of the Bank during the past half-year.

Resolved,—That the thanks of the shareholders be given to the manager, Mr Cutbill, and the other officers of the Bank.

MARK HUNTER, Chairman.

COMMERCIAL BANK OF LONDON.

—The Directors hereby give notice, that a Dividend on the paid-up capital of the Company, at the rate of £8 per cent. per annum, for the half-year ending 30th June, 1860, free from income tax, will be Payable at the Banking House in Lothbury, on and after Saturday, the 28th inst.—By order of the Board,

A. R. CUTBILL, Manager.

Dated July 17, 1860.

TURKISH SIX PER CENT. LOAN.—

In the advertisement, Notice to Bondholders, respecting the Redemption of Imperial Turkish 6 per Cent. Loan of 1854, in a portion of our Impression last week, under the Letter C, the Bond No. 5881 appeared 598.

Vol. XVIII. SATURDAY, JULY 21, 1860. No. 882

SPEECH OF THE RIGHT HON. JAMES WILSON

BEFORE THE LEGISLATIVE COUNCIL AT CALCUTTA.

SATURDAY, MAY 21, 1860.

(From the *Friend of India*, May 31, 1860.)

MR WILSON presented the Report of the Select Committee on the Income Tax Bill. After expressing his deep obligations to the members for the ability and almost complete unanimity they had shown in discussing the Bill, Mr Wilson said he presented it slightly changed in its essential points, but immensely simplified in its machinery. The observations of the Governor-General in his journey from Peshawur to Calcutta, and further consideration of all objections to the Bill, had convinced the Government of the imperative necessity of proceeding with the measures necessary to restore the financial equilibrium.

In referring to the petitions which have been presented against this measure, there is a peculiarity which must have struck every member of the Council; for upwards of two months after the announcement of the measure, with the single exception of a petition from the clerks in the public offices asking for a graduated scale, there was not a single petition either from Natives or Europeans against it. On the contrary, up to a certain time there existed throughout India, and among all classes, greater unanimity than was probably ever experienced in respect to an important measure of public policy, and that was the more remarkable when it is considered that the measure was one which taxed all classes, and with regard to some of them, for the first time. Amongst Europeans and in the European Press I may say there was absolute unanimity, and if there were any symptoms of opposition among the Natives, it was seen or heard in the most indistinct manner. No one was more surprised than I was myself at this exhibition of unanimity and almost of satisfaction;—but the cause of it soon became plain and easily understood. The public had a strong conviction of the gravity of the crisis that had for a long time been undermining the credit of the State and threatening our finances with irreparable disorder and confusion. Deeply impressed with this feeling, they were as deeply convinced of the necessity of the vigorous measures proposed by the Government,—and with a loyalty and public spirit which did honour to the Indian community, they were prepared cheerfully, or almost joyfully, to submit to any personal sacrifices to extricate the State from its difficulties. As has been remarked in England, it was perhaps the first and only time when it could be said that a heavy scheme of taxation was received with something approaching to enthusiasm. Upon the announcement, even the public funds, though for the first time subjected to a tax of *four per cent.*, rose in price. No one will pretend that all this happened in consequence of the imposition of a tax:—No, Sir, I believe it was to be attributed solely to the fact that people generally were convinced that at last they knew the worst, and that vigorous measures would be taken to secure an adequate remedy, and whatever that was they were willing to submit to it, rather than to go groping in the dark as they hitherto had done. And if, Sir, after a particular time a marked change has taken place in the opinions of a portion of the European population, but perhaps even more of a portion of the European Press, I am not disposed to attribute it to mere caprice, and much less to a diminished feeling of loyalty or willingness to bear whatever burdens the necessities of the State, may render necessary. If a change has taken place, it has been in consequence of an impression, first, that the financial difficulties of the State which had been the object of so much anxiety at home and in India, were after all, if not altogether a myth, yet had been greatly exaggerated, and that the real deficit to be provided for had been greatly exaggerated; second, that no means had yet been taken materially to reduce the enormous military expenditure which had risen to such a height during the mutinies—and that that expenditure, being still near the maximum, was susceptible of such reduction as would within a reasonable period obliterate the deficiency existing, even though as great as had been represented; and thirdly, as a consequence, that the taxes which the Government proposed were not necessary. I will not stop here to inquire upon what insufficient grounds these impressions obtained even a partial footing in the minds of a portion of the community. But of the fact I think there can be no doubt. Nor can there be any more doubt that the change of opinion which took place was attributable to this cause. And assuming that any one, upon grounds however untenable and however inconsistent with probability and facts, had nevertheless upon what he deemed competent authority obtained such an impression, it would indeed be difficult to blame such a one for a change of views. Taxes at the best are most unwelcome, and however much men may be able to reconcile themselves to them when necessary, nothing but opposition can be expected to them if a belief prevails that they are not necessary. Sir, I believe this to be the true theory of the remarkable phenomenon which we have witnessed in India since the 18th February, and which at first sight has worn so much the appearance of fickleness and caprice. So far as I am concerned, I am not disposed to find fault with it, convinced as I am that time will rectify all error and justify all the Government have proposed.

But, Sir, I might ask were there no *primâ facie* reasons well known to the whole world which might have raised, to say the least, a strong presumption against the impressions which thus obtained? Had it not become an ascertained recorded fact in the

from which no thing could induce us to depart. Well we have industriously i aquired into every description of tax known to the Natives, e ither before or since British rule. I have here the celebrated report of Mr Mountstuart Elphinstone, of the condition of the territories of the Peishwa when conquered by the English. His account of the revenue system shows that the taxes, both direct and indirect, were very numerous. We have examined other records of native taxes, and I am bound to say that, in the whole number, I have found only *one*, the incidence of which would not in practice fall almost exclusively on natives; and that *one* is thus described amongst others by Mr Elphinstone as "*a tax upon shopkeepers varying with their means—in fact an Income Tax*"; those are Mr Elphinstone's words. But I know that it is not so much to the payment as to the supposed inquisitorial nature of the tax that the natives like others object. Well Sir, that is a question of administration, and I entertain strong hopes that by the improvements introduced into the Bill that objection will be greatly modified, if not altogether removed. And, fortunately, we are not without experience on this head. The Income Tax has been partially in operation in the Punjab for some months; in Oudh it has been introduced generally into every town and district. The assessments have been all made; in many places the first instalment has been wholly collected, and in all a larger portion of it; and we are assured by the officers on the spot that all this has been done without having resort to any such inquisitorial practice and without even any difficulty. But even this experience has suggested improvements which will be useful in other places. Are we then to believe that what has proved so possible in Oudh, cannot be equally well done elsewhere? Our most recent information from Oudh and from the North-West is most encouraging in this respect. We have not yet found a single officer who has expressed a doubt of being able to carry out the tax and without difficulty, especially in the altered form in which it will now be framed. The chief complaint that we hear from Oudh is, that while they are subjected to this tax, their neighbours are still exempt. These, Sir, are our reasons for adhering to the tax; these are the grounds upon which we cannot consent to postpone its operation.

Well, Sir, I will now in a few words describe the modifications we have made in the Bill. But first as to the changes which we have not made, though urged in many petitions. We have not raised the limit above 200 rupees, because we could not do so without materially affecting the productiveness of the tax; and that we should not be justified in doing. We have not given up the one per cent. for local public works, because it is so much required, because, although expended on local public works, it cannot fail very materially to benefit indirectly our Imperial finances. Considering the relation which the Government of India holds towards the people of India, there are many works which, though purely local, are yet so important to the interests of the State indirectly, that if not done by the localities from local funds, must in self-defence be done by Imperial funds. Even take the example of this port. Unless something is done soon it is clear that the trade must suffer, and if the trade suffer the revenue suffers. But take a more striking and general example. Railways are being made in every part of India. The interest of the capital is guaranteed by the Government. The risk is ours. How are they quickest and best to be made profitable, so as to relieve the Government of that charge and to return in the course of time the accumulating balance annually placed at their debit in the books of the State? This can best be done by the means which best provokes traffic. What is the complaint most made now in respect to this point? The Lieutenant-Governor of Bengal has sent us up an able report showing that, without new roads made to the stations on the line, the development of traffic must be much retarded. Well, these are local works in which Imperial Finance is directly interested. It is these and similar reasons which induce us to retain this part of our proposal. We look to general prosperity as being the best guarantee for financial improvement, and we look to these works as being one of the best means of securing that prosperity. The modifications which we have made are these:—

1. As the Bill stood we proposed to assess the Zemindars holding under periodical revisions at *one-half* of the Government jumma. In inquiring into this point on his way down from the North-West, the Governor-General has come to the decision that one-half is more than represents the real profit of the Zemindar, inasmuch as no allowance was made for the cost of management, and that if 10 per cent. were allowed for that the real proportion would be *one-third*. Again, the hon. member for Madras has represented that in that Presidency the settlement is made upon the basis of about three-tenths of profit. The Bill as amended adopts therefore *one-third* in place of *one-half*.

2. There are several questions arising out of what is called the double Income Tax; for example, a person in India holding consols in England is charged with the Income Tax there, and if charged here would be liable to two Income Taxes. We propose therefore to exempt Incomes from foreign funds except so far as such Incomes may be brought into India, and form part of a person's means of living in this country.

3. We apply the same rule to Income derived from other property, such as lands or houses or investments in England or any foreign country.

4. With regard to persons either Civil or Military, if the person resides out of India, and draws them from the Secretary of State in England, they will be exempt. But if drawn in India, whether persons reside in India or not, or if drawn at home by a person residing in India, they will be chargeable.

5. With regard to commercial profit, we desire to pursue the same course as near as we can. In England the profits of merchants having houses in England are charged wherever made. What we think is this; the profits of Indian houses, whether made in India or elsewhere, as long as the business is in either aspect Indian. If goods are bought in Manchester, and consigned to the same house in Calcutta, though the profits might be made to appear in the Manchester and not in the Calcutta books, yet the profits should be regarded as equally Indian as English, so far as the house here is concerned; or if produce be shipped to London, the profits in like manner should appear as those of the Indian firm.

But suppose a merchant in Calcutta is a partner in a house in London which has branches of business of an entirely neutral kind, say between London and South America, or between London and Australia, not involving Indian business at all, then we think the merchant should be exempt in respect to the profits of such neutral trade except so far as he might import such profits as a part of his Indian income.

With regard to the Indian funds, we are of opinion that under all circumstances they must pay to the Indian tax, nor does it appear that this circumstance has checked the demand for them in England, for during the last two months or so paper has been enfaced for England, and made subject to the Income Tax, to the extent of nearly 1,500,000*l* in round numbers.

6. With regard to the Army and Navy, the Committee has decided that all shall be chargeable whose net incomes and emoluments are not less than those of a Captain in the Queen's Army.

There is only one other topic upon which I wish to say one word. I have again been urged to press the Home Government for an Imperial guarantee to the Indian debt, and it has been represented that we might perhaps save a million a year or more in the form of interest. Sir, I believe such a bargain, though it did save India apparently a large sum in this way, would be the worst in the shape of economy she ever made. Gentlemen when they discuss the question forget that it is a principle never departed from by Parliament, that if responsibility is incurred by the Imperial Exchequer, absolute control must be given to the Imperial Treasury, or such a power of check and interference as amounts to that. Well, Sir, when we consider the money relations which have always existed and which in future are likely still more to exist; when we consider how hampered our action would be in India if the consent of the Treasury were required for this and for that; if we could consider how it would tell against Indian interests if upon all occasions of settlement of accounts, of balancing the respective share in what were partly foreign, the decision of the Treasury at home were to be final and conclusive, if we consider all this, we shall have very little difficulty, I think, in arriving at the conclusion that it would be much more economical to retain our own independent control over the finances of India without the Imperial guarantee, than to submit ourselves to the double supervision and final decision of the Treasury at home, with all the advantage such a guarantee could give, and the more the character of the Indian Army becomes European, the more important this consideration becomes. The last thing a nation should give up is its independent power and control over its own Exchequer. And as it is quite certain that if given at all, or at any time, it could only be on such conditions; I own I cannot recommend such a step to be taken, even were it within our reach, which it is not, nor is likely to be.

Sir, I have now touched upon all the topics which it appears necessary that I should do at this time to put our real position plainly before the country in relation to this Bill. I have shown you, I hope, conclusive reasons why it is impossible we can recede from the position we have taken, without deserting our first duty. I have shown you that the crisis we have to encounter is as serious if not more so, than it appeared to be on the 18th of February. I have told you that the mature deliberation of the Supreme Government, taken upon a review of all that has passed and all that is known, points to a steady prosecution of the work we have begun. To this end we are ready to devote our most anxious efforts; we can consent to any personal sacrifices; we can consent contentedly to obloquy and to be misrepresented and misunderstood, but there is one thing to which we cannot consent. We cannot consent to be parties to deluding the public by the suppression of facts, however unpalatable, or by the adoption of palliatives which, however they might smooth our path for a time, could only end in public disappointment.

THE NEAPOLITAN PROPOSITION AND LORD JOHN RUSSELL'S VIEW.

On Thursday night Lord John Russell made a statement which will be read with very great regret by all who understand the true meaning of the recent Neapolitan negotiations. An envoy had been sent from Turin to Garibaldi, said Lord John Russell, "proposing that he should make a truce with "the Neapolitan forces, and should engage not to make any "expedition against the territories of the King of the Two "Sicilies on the mainland. *That message was entirely in con-"formity with the opinion which Her Majesty's Government have "expressed to the Court of Turin.* In answer to the present "question, I have to state that it is true that an envoy from "the Neapolitan Government has lately arrived in this "country, and has proposed to Her Majesty's Government "that they should mediate between the King of the Two "Sicilies and Garibaldi; and that if that mediation for the "purpose of obtaining an armistice and providing that there "should be no attack upon the territories of the King of the "Two Sicilies on the mainland should not be accepted by Gari-"baldi, force should be used by the Governments of Great "Britain and France with a view of imposing such an "armistice upon him. *To that proposition Her Majesty's "Government have refused their assent.*" The last sentence in Lord John Russell's explanation by no means indemnifies us for the disappointment which the other sentence printed in italics has caused us. That England should have lent material aid to guarantee the Bourbon dynasty against the attempt of Garibaldi and his volunteers would have been almost an impossibility. Public opinion in this country would, we trust, very soon have made itself heard in vehement reprobation of such a step. But to know that the English Foreign Minister has recommended an armistice between Naples and Sicily,—and so far interfered as to advise Sardinia to urge this step on Garibaldi, is one of the first symptoms of official blindness which the present Foreign Minister has displayed. It is true we knew already that he is predisposed to doubt the possibility of the unification of Italy, and to advocate the dualistic scheme. But we were not prepared to find that he would actively recommend that scheme in connection with the Bourbon dynasty, which has so often and so recently shown its treacherous desire for reaction.

What does the proposition which Lord John Russell so simply approves really mean? It means that the Neapolitan Government wish to play exactly the same game which they played in 1849. Then, also, there was a truce between Sicily and Naples. The Neapolitan Government gained time for a reactionary movement; the Sicilians lost, first, their only opportunity for a complete understanding with Naples, and so threw away their own best means of self-defence. The King of Naples was enabled to put down the constitution on the continent, and then to reconquer the island. The truce between Sicily and Naples expired on the 21st May, 1848, six days after that terrible day of massacre, the 15th May, when the soldiers of the Royal Guard gained the upper hand over the Constitutionalists. Early in June an expedition from Sicily landed in Calabria to attempt too late what ought to have been done long before if it were to be done effectually. The Royal forces under General Nunziante were now well organised, and completely defeated the scheme, and the fugitive Sicilian volunteers, ensnared by a Neapolitan vessel hoisting English colours, were taken prisoners and treated with the ordinary mercy of the Neapolitan Government. By the end of three months the Neapolitan Government was not only quite safe at home, but able to despatch a powerful force to Sicily. In September, Filangieri, at the head of 16,000 troops, entered the island, and carried out successfully a policy which he would be only too glad to pursue again. There was then a second example of the fatal effects of an armistice between volunteer troops and a regular army. After Filangieri had earned for himself the title of the butcher of Messina by the cruelties of which he was guilty in the three days' fight for that city, the mediating Powers—France and England—imposed an armistice which lasted five months. At the end of that time, in February, 1849, the Sicilians having refused the terms offered by the mediating Powers, the contest was resumed. The volunteer force, ill disciplined and organised, had lost ground, while the regular army had gained ground, and in the battle which put the Sicilians again under the foot of the Neapolitan despot, they must have learned to dread the policy of such armistices.

The result now would almost certainly be the same. If an armistice between Garibaldi and the Neapolitan Government is agreed upon, not only is Naples, but Sicily, placed at the mercy of Bourbon good faith. We may talk of a constitution, but a constitution will not get into working order for six months. The first duty of the Neapolitan Parliament, if it ever does become an efficient reality, would be to impeach many of the King's present agents. Before that happens the army may be again placed at his disposal,—the means of paralysing the constitution may be given him,—and then, finally, he may be able to bring the resources of a rich kingdom of six million inhabitants, with large military armaments and artillery, to bear upon an island of two millions of inhabitants, with no organised resources at all. During the armistice, Garibaldi's volunteer force could not but melt away,—while the King's paid army might be indefinitely improved. In short, if a General of volunteers is to succeed at all, he must avoid every delay, use the enthusiasm of the moment, and enter into no vain negotiations which, by gaining time for his opponents, are likely enough to cause his ruin. Garibaldi would forfeit his reputation for sagacity if he listened seriously to the Neapolitan proposition, in spite of the acceptance it has found in London and Turin.

The one fact that ought to satisfy us how little the mere granting of a constitution at Naples can be trusted, is that the whole foreign diplomacy of Naples is still in the hands of the anti-Constitutionalist party; and had the rising of the Royal Guard last Sunday week succeeded in bringing about a reaction, all the Ministers who are now talking at London, Paris, and Turin of the good faith of the King and the grant of the constitution, would have by this time resumed the confident language they held a few months ago as to the impossibility of self-government in such a State as Naples. Let us test the present disposition of the Neapolitan Government by this criterion. Who is now the Minister of Foreign Affairs? De Martino was in 1848 an obscure consul of the Neapolitan Government on the coast of Africa. Soon after the revolution, the Neapolitan Government wanted a young and active agent in London to institute a suit against the English Government for the recovery of a Neapolitan vessel. He was sent hither for that purpose, gained his suit, and so much pleased the Neapolitan Government that he was soon after appointed Secretary of Legation to the Neapolitan Minister here, Prince di Carini. During his tenure of this post, he consistently maintained that constitutionalism in Naples was impossible; but he differed from his superior in advocating an amnesty for the political offenders at Naples. In consequence of this difference he was recalled, and was threatened with an appointment in Brazil as a kind of banishment, and thus acquired a certain reputation as a mediator between the Liberal and despotic party. But he has always, till the revolution of 1860 took place, held the same language,—and has consistently expressed his complete disbelief in constitutional Government, though he has advised an amnesty and leniency towards the Liberal agitators. Such is De Martino, and De Martino has far more pretence to the title of Liberal than any of his subordinates.

The Marquis de la Greca, who has just urged on Lord John Russell the proposition of which we are writing, was, before 1848, one of the Court party. He married the daughter of one of the most extreme of that party. In 1848, however, he embraced the Liberal side, and was esteemed an honest Liberal. When the reaction began he subsided into silence. At the time when all the other Liberal noblemen—many of whom had taken a much less active part than himself in the revolution—were disgraced, exiled, flying for their life, he remained unmolested. Within a year he was made a gentleman in waiting. Within another year he received his present title of Marquis. Since then he has remained high in Court favour; until now at last, his liberality in 1848 is made the excuse for selecting him for his present mission.

Canofari, now the Neapolitan Minister at Turin, and who is said to be intended to succeed Antonini at Paris, was Secretary to Legation in London in 1848. He loudly inveighed against Mr Gladstone's letters on the state of the Neapolitan prisons, and constantly advocated a reactionary course. His brother was one of the Judges employed in the State trials of 1849, and was the only one who voted for the sentence of death on Poerio, Settembrini, and the other patriots. The Judge was afterwards rewarded by the King,—was made a Marquis, and in consideration of his merits, the brother, then Secretary of Legation, and acting as *Chargé d'Affaires* at Turin, was appointed Plenipotentiary Minister.

Count Ludolf, the Neapolitan Minister in London, is closely connected with the most extreme *réactionnaires* at Naples. His father was one of the principal plotters at Gaeta in 1849. He has continued to recommend a similar policy to the present King. Count Ludolf is assisted in his duties in London by a Secretary of Legation no less reactionary than himself. Signor Fortunato is, we believe, the favourite nephew of the Marquis Fortunato, who, as Prime Minister in 1849, advised the State trials, and carried them into execution.

Prince Petrulla, the present Neapolitan Minister at Vienna, is the worst of the whole diplomatic corps, and by far the worst in general reputation. He is a Sicilian who, in 1848, was loud in his denunciations of Lord Palmerston's policy for Sicily. In return for his services, he received the appointment he still holds of Minister Plenipotentiary at Vienna.

But, perhaps, the most impressive hint as to the secret leaning of the Neapolitan Government is to be found in the man who now commands the National Guard at Naples,—Prince Ischitella. He was one of the old Muratist party; but he it was who, in 1848, gave the order to fire on the 15th of May. The very next morning, we believe, he was appointed Minister at War, and he remained for several years in that post, and in great favour with the late King.

Such are the men who still hold the highest diplomatic offices under the Neapolitan Government,—some of whom would probably be impeached if the constitution ever get into working order. When we add to this that the Castle of St Elmo, which commands Naples, is garrisoned wholly, we believe, by foreign troops,—how can any one suppose that on the mere faith of a promised constitution, Garibaldi would be justified in concluding an armistice with Naples, and practically abdicating his present office? We heartily regret that the British Government has given advice which can in any way seem to recommend such a step. We hoped we had done with endorsing Bourbon promises. At all events, we think we can predict that the Dictator of Sicily will not feel much inclination to accept our recommendations.

FREE TRADE IN PAPER.

THERE is no doubt that Free Trade is one of the most unpopular things in practice in the world. Abroad it is unknown, and on that account it is unpopular. But in this country we are in the habit of repeating its maxims; we have been so for many years; and yet even here fresh occasions perpetually arise which show with how little distinctness the subject is apprehended, and how little hold it has upon the popular sympathies. In truth, popular sympathy is apt to be opposed to it. Its fundamental maxim is opposed to that of the multitude. Most men sympathise withthe producer. He is a visible person; he does 'good to the nation'; he 'employs 'labour'; he presses his claims for support upon the public; he often has and always seems to have much at stake in the maintenance of protection. On the other hand, the Free-trader attends exclusively to the interest of the consumer, and no one knows who the consumer is. He is, so to say, an invisible person; he 'employs no labour'; he consumes for his own benefit and not for that of others; he lays hold on no imaginative sympathy. The good to the consumer, too, seems for the most part not commensurate with the injury to the producer. You seem only to be cheapening some ordinary article by half a farthing which no one in practice would ever feel; and, in order to do that, you destroy a whole department of native industry,—you shut up whole factories,—you throw many persons on the mercies of the world,—you make a scene of misery where there used to be a scene of comfort. Such will ever be the popular conception of Free Trade, and it will ever require a constant effort to secure for that doctrine its own due and paramount place.

On both sides of the Channel we see illustrations of this remark. In *France*, the Protectionist party, aided, we regret to say, by the Liberal party, who oppose Free Trade because Louis Napoleon is a Free-trader, seem disposed to refuse to make the slightest relaxation of the present prohibition upon the export of rags. In *England*, the paper-makers are straining every nerve to obtain a prolongation of the protection which they have. A Bill has been brought into Parliament to reduce the Customs duty on foreign paper to what is believed to be the exact equivalent to the existing Excise duty on home-made paper, and to this Bill the manufacturers here have two objections.

First, they say that 16s per cwt, the sum which is fixed upon for the reduced Customs duty, is not in truth the fair equivalent of the 14s 9d Excise duty. And on this point the case of the paper-makers should be carefully investigated. It is for them to show, not in vague statements, but in precise figures, what their real position is. *If* they can succeed in showing that the duty which it is proposed to set on the foreign product is less oppressive than that which is now to be retained on the home product, their argument will be irresistibly cogent. They will have shown that Mr Gladstone proposes to subject them to an injustice. But we must be permitted to say that the arguments they have as yet advanced are very vague on this point, and are deficient in practical detail. It is certain that Mr Gladstone would modify his measure to

meet a practical objection of this sort, but no such objection is substantiated with precision.

In reality, the paper-makers rely on their second objection. They say, if foreign countries will not let us have their rags, why should we take their paper?—if they restrict us from the raw material, why should we buy their manufactures? But we say, why should we *not*? Why is the purchaser of paper to pay dear for it, in order that the paper he buys may be made here and not elsewhere? The object of industry is the benefit of the consumer. We all, under the civilised system of the division of labour, work for the benefit of each other. We employ our time in providing for the wants of others, whom we do not see and do not know. The test of the goodness of our work is, that we provide better for their wants than any one else does. The case of the paper-makers is, as Mr Gladstone would say, the case of the Corn Law over again. What an injustice, it used to be said, is it to our farmer, with dear labour and poor soil, to be exposed to the competition of the foreign farmer with cheap labour and a rich soil. What an injustice, it is now said, is it to our paper-maker, who has to buy his material dear, to be exposed to the competition of a paper-maker who can buy his material cheap. *Both* arguments are important if we are bound to balance the advantages of the foreigner, which we cannot help, by imposing on him equal disadvantages; *neither* is of the least value if we say we will put all producers on a level as far as our fiscal system is concerned. We will do no injustice; but we decline to make artificial counterweights for the natural advantages or the restrictive laws of other nations. We can only place all producers on a level as far as our own laws go: we will, in all cases, do that; and we will in no case do more.

But, in truth, the case of the paper-makers is not so strong as the case of the Corn Laws. The agricultural Protectionists had a telling argument, though we now know it to have been erroneous, derived from the inherent fertility of foreign soils. Our land is scarce, it used to be said, and we are reduced to poor soils. In some countries fertile land abounds in excellent situations. Our opponents have an *indestructible* advantage. The foreign paper-makers have only a *destructible* advantage. No doubt a nation which will not allow the export of rags has for a time the advantage of cheap rags; but it is only for a time. As soon as that nation manufactures paper on a large scale, the price of rags will rise at once. Take, for example, the case of France. France, we fear, may be induced not to relax in any degree her prohibition on the export of rags. What is the consequence? For a time she injures the rag merchant and benefits the paper-maker. But as soon as the prospect of foreign trade induces the manufacturer to increase his business, the rag dealer will raise the price. Rags are an article essentially limited in quantity. The moment the demand is increased the price will rise rapidly. The price of rags in France, no doubt, seems to give the French manufacturer a considerable advantage over ours; but it is an illusory advantage. If he should attempt to export paper to this country, it will immediately diminish, and will soon entirely cease.

THE GOVERNMENT SCHEME FOR OUR NATIONAL DEFENCES.

We have recently given our opinion as to the method of borrowing by terminable annuities. It is not the best scheme, but it is a tolerable scheme. The best way of borrowing money which it is believed to be desirable to repay is the usual way. It is desirable to borrow it in Consols, the most popular security in the money market, and it is desirable to provide for its gradual liquidation by a *real* sinking fund, to be maintained out of surplus revenue, and to be annually invested in the purchase of such Consols. But if Parliament cannot be trusted to maintain a surplus revenue, and if it is really necessary to repay the money, the method of borrowing on terminable annuities offers an available resource. This method secures that the money will be repaid, but this is its only merit. It costs at first more than a loan in Consols, because such annuities are only suitable to a peculiar class of persons, and are not an article largely dealt in upon the Stock Exchange; it is disadvantageous, for the most part, during its continuance, for money has often to be borrowed for other purposes while old terminable annuities are still running, and we have then the anomaly of borrowing with one hand and simultaneously repaying with the other. We fear, after the experience of 1860, we must add that terminable annuities are also mischievous at their cessation: at least the anticipation of that cesssation is mischievous. Vague hopes of fiscal relief congregate round that period, and, even though they are disappointed, they complicate at that time the measures, and impair the means, of the Chancellor of the Exchequer. Still, terminable annuities really ensure the repayment of the money borrowed. They have this merit, though they have not any other.

We have recently also explained our views at length respecting the best mode in which we can provide for the defence of the country. We have only to apply the principles we laid down last week to the criticism of the Government scheme. We then said what seemed to us sufficient in support of them, and we certainly have seen as yet no reason to change or modify them.

The resolution moved by Lord Palmerston is as follows:—"That it is the opinion of this Committee that towards providing for the construction of works for the defence of the Royal dockyards and arsenal of the ports of Dover and Portsmouth and the creation of a central arsenal, a sum of money not exceeding 2,000,000*l*."—that is the sum set apart for the works of the present year—"shall be charged upon the consolidated fund of the United Kingdom, and that the Commissioners of Her Majesty's Treasury be authorised and empowered to raise the said sum by annuities for a term not exceeding thirty years, such annuities to be charged also to the consolidated fund." And it is intended to expend on the whole a sum between 9,000,000*l* and 12,000,000*l* in the erection of fortifications.

No speech in such circumstances could be more manly or statesmanlike—more English or more undiplomatic—than that of Lord Palmerston. According to the saying, "He called a spade a spade." He said what every one thinks. He said, in substance, that both the army and navy of France were excessive for the purposes of defence, and could only therefore be maintained as a provision for aggression; he said that the mode of making war had altered; that our insular situation, which used to be an effectual defence, was now no longer such—that it might be the reverse—that it might facilitate attack—that at any rate it would not guard against it. All these are truths with which we are familiar, but it is, nevertheless, most important to have them stated by a Minister and recognised by a Government. They are now matters of business, but last week they were not so. The principle of the proposition made by the Government seems to us not only certainly true, but evidently true. We are all agreed. Mr Bright does not dissent from this, that the English navy is to be our principal means of defence: it is the means on which we should chiefly rely. But the security of certain stations on the coast is essential to the security of the English navy. A navy cannot be always at sea. It must have certain harbours where it can be repaired, refitted, and remanned; where it can be received after an unsuccessful engagement; where it can return in triumph after a successful one. On these points, therefore, we must be prepared to spend what is requisite to defend these places. We must provide our ships with all which is needful, and we must make the provision secure. We must make a complete defence for points the safety of which is essential to our safety.

So far our approval of the scheme proposed is definite, and is earnest. We are sure that the principle is right; we are sure that it should be acted upon without delay. But we doubt as to the details. We are dubious whether it will be found expedient to adopt many of the rather miscellaneous recommendations of the Commissioners. We should like to see a distinct recognition of the principle that it is expedient to keep as few stores, to manufacture as few things—in a word, to do as little work on the sea-coast as possible. We think this principle the necessary correlative and the necessary corrective of the principle upon which the recommendation of the Government is based. The Government say that the sea-coast is insecure, that it is an exposed point, that we must protect those parts of it which are necessary. We say, 'Make as few points on 'the sea-coast necessary as you can, do as little at those 'points as you can, do not artificially multiply the points 'requiring a costly defence, do not artificially extend the

'area of the localities which it is needful to defend. We are 'willing to do what is necessary, but we are willing to do 'no more.' The Report of the Commissioners seems to provide for the defence of the ancient, miscellaneous, and enormous establishments which we have at Plymouth, at Portsmouth, and elsewhere. But we do not wish that Parliament should pledge itself to make such provision. We think it should intimate an opinion that much of what is now done there might much more safely, and nearly as conveniently, be done in the interior of England.

The scheme of the Commissioners should be looked at from another point of view. The Duke of Cambridge and other members of the Horse Guards Defence Committee have issued a report on the subject. They say :—"Believing that "the Report of the Royal Commission will tend to create an "impression that the defence of the dock-yards, when for-"tified, will be provided for to so great an extent by the ir-"regular forces, that the standing army will not be trenched "upon to a degree worthy of mention, the Committee consi-"der it their duty to express their opinion that, in order to "inspire that confidence which is necessary in the defence "of such important works, the proportion of regular "troops will be so considerable that it must be taken into "account. Certainly, a large proportion of well-trained "artillerymen will be essential, more especially on those "sea batteries which are intended to oppose ships—a service "requiring that the guns should be worked with great ra-"pidity and accuracy. It being, therefore, the opinion of the "Committee that a considerable portion of regular troops "should be allotted to the defence of the fortifications in the "event of a war, it is their duty to state that this por-"tion cannot be supplied from a regular army of the "present strength; an increase to it would, therefore, then "become necessary to afford the numbers requisite for the "defence of the kingdom at large, including the defensive "works." And if the whole of the vast area of our present establishments, at the places referred to, is to be protected from a long-range bombardment, no one will question that the remarks of the Horse Guards are very sound. A larger regular army will be requisite. But if, on the contrary, we confine our fortifications to a limited area ; if we select defensible situations, and fortify there only the *minimum* area which is requisite for the necessary works, no such costly result need be anticipated. The line of our fortifications will be comparatively small, and comparatively few men will be needed to defend it.

ENGLISH POLICY IN SYRIA.

The papers which have been presented to Parliament relative to the disturbances in Syria throw but little light on the origin of the outbreak between the Maronites and the Druses. Whether, as was stated explicitly in the unofficial accounts, the Christians began the war by a crusade against the Druses, or the Druses first attacked the Maronites, is not yet clear. It is clear, however, that the Turkish soldiers have not only openly favoured the wild Mahometan tribes, but have been themselves sharers in the slaughter of the Maronites. It is tolerably clear, too, that Khoorshid Pasha, the Turkish commander in Syria, was wilfully passive, if he did not at times actively support the Druses. It is also certain that the Government at Constantinople was culpably dilatory in sending troops after grave disasters had taken place. Under these circumstances, whatever may be the cause which has excited these disturbances,—whether the Maronites have been stimulated by the agents of an European Power, as has been vaguely rumoured, to this outbreak,—or whether, as seems far more probable, it is the natural result of smouldering antipathies and incessantly renewed injuries,—there is, at all events, no excuse for the Ottoman Government. Its officers have certainly abused the power they held, by kindling instead of soppressing, the mutual hatreds of its subjects. And even the Supreme Government has shown an apathy in despatching aid to the scenes of confusion and slaughter, which cannot but raise some doubt as to the sincerity of its wish to protect the Christians under its care.

Under these circumstances, the French Government have proposed a joint intervention, to which England has agreed provisionally on its receiving the assent of the Porte, and also on certain stipulated conditions for the evacuation of Syria by the foreign troops when order is restored. England herself would, under these conditions, contribute a naval contingent for the pacification of Syria, though she would not think it necessary to despatch a land force.

It is clear that the English Cabinet feel considerable jealousy of this French intervention in Syria. Lord Palmerston has always made it an essential part of his policy to resist any acquisition of territory by France or Russia in the Mediterranean ; and not only in 1840, during the reign of Louis Philippe, but quite recently his dread of the encroachments of French influence in this direction has manifested itself. His steady opposition to the Suez Canal scheme, no doubt, originated thus. And if the English are now prepared to join the French in the Syrian expedition, after receiving the assent of the Porte, it is probably as much in the hope of retaining an influence over their movements, and securing a voice in fixing the time for evacuation, as from any conviction that English aid is necessary to tranquillise Syria.

We confess that we should be exceedingly sorry to see England making at present any great exertions to neutralise French influence in Syria. We have no wish to see Turkey or any Power treated dictatorially by France; and, of course, we have no desire to see France gaining a fresh territorial hold on the Eastern shores of the Mediterranean. But in the present matter the Porte has certainly shown itself either very unwilling or very incompetent to rule its Syrian subjects with firmness and justice,—and whether it be due to an unjust preference for Moslem tribes, or to real incompetence to maintain order over so wide an area, or to both causes combined, the Porte has certainly given good grounds for the interference of stronger and more impartial Powers. We are certainly not called upon in this case by any tie of honour to vindicate the independence of a Government that has shown so much imbecility in restraining its own troops from rapine and slaughter.

On the other hand, the duty of interference can scarcely be brought home to England on grounds of philanthropy, except so far as the presence of an English squadron on the coast may protect the inhabitants of the coast towns. We already do more than our share,—perhaps more than we are, strictly speaking, able to do well,—in administering the affairs of Oriental nations unable to administer their own. With such an Empire as British India—half-governed as it is—upon our hands, and an expedition on the coasts of China to rectify the Chinese system of foreign policy,—it would be madness in us to undertake any task likely to demand permanent attention to the administration of Syria. And let us remember, that with these half-civilised nations, hasty and temporary interference is less likely to do good than harm. It is only when we can guarantee a permanently improved Government that our interference is justified at all.

But if neither pledged honour to Turkey, nor regard for the Syrian populations themselves, can furnish sufficient reasons for our intervention,—still less, we think, can the one motive which is probably uppermost in the minds of our statesmen, the desire to counterbalance and limit the influence of France. The influence of England over European policy is not an infinite and inexhaustible quantity. We can do much,—but the more we press for concessions on one side, the less are we likely to get on another. The English and French policies for Italy are by no means in perfect accordance. If we would do all that we may there, we must concentrate our efforts as much as possible on that one question. If we can secure to the Italians complete freedom to constitute their own kingdom, and regulate their own affairs without foreign interposition, we shall have achieved the greatest diplomatic triumph of modern times. Nor will it be without explicit advantage even to England. A strong and united constitutional Italian kingdom in the Mediterranean would do more to balance the influence of France in that sea than any encroachment on the Syrian coast could do to increase her predominance. Even from the most selfish point of view, therefore, it would be well worth while to compound for no intervention in Italy, by leaving French policy in the East comparatively unfettered by our alliance or remonstrances. But it is not on that consideration that we base our case. We are persuaded that a far greater boon will be gained for Europe, and even the world, by the

successful foundation of a great Italian Kingdom, than can be gained in any other way. Should France supplant Turkey in Syria, it is likely enough that she would govern better than Turkey has ever done,—certainly not worse. Should France thwart Sardinia in Italy, she will defeat the brightest political hopes of the present century.

MESSRS STREATFEILD'S BALANCE SHEET.

A MORE discreditable balance sheet than that of Messrs Streatfeild, Lawrence, and Mortimere has seldom been laid before the public by a house which had long been held in high estimation. It shows unmistakeable traces of reckless trading, of cross bills, of credit obtained by questionable means, of the postponement of the failure long after the partners must have known that they were insolvent.

A person accustomed to insolvent estates will read much of this at a glance. We have—

	£
Total liabilities	744,448
Total assets	214,140
Deficiency	530,308

Showing a loss of more than half a million, and a dividend of 5s 4d. When we remember that we are examining a *first* balance sheet, and that first balance sheets are almost always too flattering, we shall be better able to measure the greatness of the loss and the smallness of the most probable dividend.

But these figures do not show the most disgraceful peculiarities of this insolvency. The part of the balance sheet most likely to show whether a trader has been prudent or reckless is the part which shows what debts are due to him. If those debts are good, he has probably been careful in the selection of the persons with whom he dealt, and he has probably been engaged in *bonâ fide* transactions only. If, on the other hand, many of those debts are bad, the trader has certainly been imprudent, and has very probably been engaged in questionable transactions. Let us try Messrs Streatfeild's balance sheet by these tests. We find that they had—

	£
Bills receivable in circulation	767,730
Of which there will be paid in full in the usual way, only	110,502
	657,228
Of which there will be paid from collateral securities	142,688
Leaving not to be paid at all	514,540

So that only one-seventh of their bills are good irrespective of collateral security, and five-sevenths are bad altogether.

The other side of the account shows the same result. We have an estimate of—

	£			£
Debtors good	43,350	Estimated to produce, irrespective of claims on them		43,350
— doubtful	217,670	—	—	66,499
— bad	34,683	—	—	...
	295,703			109,849

that is, nearly 300,000*l* of debts are estimated in the first balance sheet at little more than 100,000*l*, and are likely, therefore, to realise very much less.

These figures speak for themselves. They show that the insolvent firm must have been reckless and speculative, must have dealt largely in accommodation bills, must have strained their credit to the utmost. It is impossible not to believe that practised men of business knew well what they were doing. They must have known for some time past that they were insolvent, that they were only using their last resources at the expense of others, that they were using their credit for the worst purpose—the injury of those who trusted them.

There has been some discussion at the meeting of creditors and out of doors as to the course to be taken. Some parties believed it would be best to throw the estate into bankruptcy, and some that it would be better to wind it up under a private arrangement. As far as the dividend is concerned, we fear it is of very little importance what becomes of it A large estate, with numerous accommodation bills, which starts with 5s 9d in the pound, cannot, under any management, yield very much. But, as far as the public interest is concerned, bankruptcy seems the preferable alternative. It is a somewhat severer ordeal. It gives greater opportunities of detecting latent fraud. It is disliked by debtors, and persons in Messrs Streatfeild's position ought not to have what they like. It is public, and a shameful publicity is the only penalty which we can practically impose on misconduct such as theirs.

THE BOARD OF TRADE RETURNS.

THE declared value of the experts for the present month shows a falling off of nearly a million and a half sterling on the exports of the same month in last year. The returns for the month of June in the last three years are as follows :—

1858.	1859.	1860.
£	£	£
10,241,433	10,665,891	9.236,454

For the half-year ending with the 30th June, the declared value of the experts is less by a million than in the same six months of last year :—

SIX MONTHS ENDED WITH 30TH JUNE.

1858.	1859.	1860.
£	£	£
53,467,804	63,003,159	62,019,989

The falling off of the last month is distributed over the cotton, cotton yarn, linen, hardware and cutlery, iron, and worsted trades,—in almost all of which there is a marked diminution as compared with the same month in last year. Even in the exports of manufactured woollen goods, tho trade in which has hitherto shown a steadily increasing prosperity, this month shows a decline,—except in the item of "woollen and worsted yarn," where the increase is still maintained. The export of cotton goods for the *six months* to British India has declined from 6,094,433*l* in the first half of 1859, to 4,738,440*l* in the first half of 1860, or by 1,360,000*l* worth of goods.

With regard to the imports, the arrivals of cotton continue to be very large. In June, 1860, 2,102,048 cwts have been received, as against 1,655,306 cwts in the June of last year, and 1,339,108 cwts in June 1858. The increase for the six months is no less than three millions of hundredweights ; that is, the half-year's receipts are greater by more than 60 per cent. than in either 1859 or 1858. Very large supplies of wool have also been received. In spirits, the increase of consumption, especially in Geneva, is very considerable. The Rum entered for home consumption in the six months is increased by about 300,000 gallons, or, speaking roughly, 20 per cent., since last year ; the Brandy has increased by about 120,000 gallons, or again about 20 per cent. ; the Geneva, by about 178,000 gallons, or by more than twelvefold what it was last year. The quantity of wine entered for home consumption has not increased very much as yet in consequence of the Budget—not so much as 12 per cent.,—but the quantity of *French* wine imported is twice as much in the first half of 1860 as in the same six months in 1859.

The table of computed values of imports is, as usual, a month in arrear of the others. We only have it for the first five months of 1860. The return is as follows :—

COMPUTED REAL VALUE of IMPORTS.

Month of May.			Five months ending 31st May.		
1858.	1859.	1860.	1858.	1859.	1860.
£	£	£	£	£	£
13,789,681	11,561,707	14,687,274	44,427,211	44,968,863	57,097,638

The increase of the month of May on the same month last year is, however, in great measure accounted for by the increased imports of raw cotton alone. The cotton imported in the month of May, 1860, is worth more by 1,800,000*l* than the import in 1859. Besides this, the value of the May imports of wine (*not* of the quantity retained for home consumption) is increased by nearly 400,000*l* ; of raw silk, by 250,000*l* ; of tea, by 140,000*l* ; and of coffee, by more than 200,000*l*. No less than six millions and a half sterling has been spent in raw cotton in the first five months of 1860 *beyond* what was so spent in the same period of the previous year.

INDIAN FINANCE.

[Continued from the letter dated May 13th, printed in our impression of 30th ultimo.]

TO THE EDITOR OF THE ECONOMIST.

Calcutta, June 4, 1860.

SIR,—In my last letter I endeavoured to give you some idea of the state of public feeling among the Natives regarding the income tax, and of the provisions made in the Bill to obviate the objections which have arisen or might arise.

The report of the Select Committee of the Legislative Council on the Bill has been presented by Mr Wilson to the Council. Reports had prevailed that the Committee were not perfectly unanimous on certain points in the Bill. It was said that some members wished to raise the limit fixed

as the minimum of income liable to be taxed, and to give up the one per cent. (to be levied in addition to the three per cent. for the general service of Government) for public works. There certainly was some difference of opinion; but, however this may have been, all the members of the Committee signed the joint report, which left all the main points of the Bill untouched. All incomes from 200 rs per annum to 500 rs will pay two per cent.; and incomes above 500 rs will pay four per cent, of which three per cent. will be for the general service of Government, and one per cent. for public works; and incomes less than 200 rs a year will be exempt altogether.

It has been said that, supposing the levy of three per cent. to be justified by State necessity, it does not follow that an equal necessity exists for levying an additional one per cent. for local works. But in fact these so-called local improvements, when carried out, as they will be, simultaneously in all districts, will, when taken together, amount to works of provincial or even Imperial importance. A commercial road is to be made through a number of districts; each district will construct its share from the funds provided by the new tax. A railway is constructed through a province. The local roads to be constructed so as to meet the various stations, and which really are the feeders of the railway, will be constructed in each district from the funds provided by the new tax. These, then, are the lesser veins connected with the great artery through which the life-blood of the country is to flow. Are not such local roads of Imperial consequence? The bridges, the viaducts, the embankments, to be constructed in any one district from these funds, will facilitate the traffic resorting thither from distant places. The local committees, to whom the management of these funds is to be intrusted, will not expend the money merely on the conservancy of the principal cities, or on municipal improvement, or on the adornment of stations, however valuable and useful such objects may be. But the money will be largely applied to a variety of works which will promote the general development of the resources of the country. The providing of these funds, then, by the additional one per cent., will add materially to the means at the disposal of the public authorities for the advancement of works of utility,—those very works which are said to be among the crying wants of the country,—wants which avowedly the Government has not at present the power of satisfying. But the new arrangement has one advantage over any other that has yet been introduced. Heretofore, the more urgent needs of the State have been met first from the available income; and such modicum as the Government could afford to allow has been allotted to public works. But now, for the first time, a distinct portion of revenue is *appropriated* (in the strictest sense of the term) to public works. The proceeds of the one per cent. will be paid into the account of local committees appointed by Government. The money will *not* be available for the general service of Government. On the other hand, the committees will *not* be competent to expend these monies on any works they may select, but on works to be sanctioned by Government. Thus there will be provision, *first*, for the appropriation of the money to a definite object; and, *second*, for the due expenditure of the money thus appropriated. This certainly is a step in advance of anything that has yet been attempted in India.

When presenting the report of the Select Committee on the Bill, Mr Wilson announced that what has become well known in Calcutta as the *double* income tax would be given up. Various individuals resident in India would have felt it a hardship that property of theirs situate at home and paying English income tax, should pay Indian income tax also, although such property was in no way under the protection of the Indian Government, and although its proceeds were in no way remitted to India. Again, it seemed hard that pensions and other allowances drawn by servants of Government at home, and therefore paying English income tax, should pay Indian income tax also. Again, there were doubts as to the propriety of charging a merchant resident in India with Indian income tax on profits of those portions of his business which he might be conducting in *other* countries, which business or branch of business might in no way be concerned with India, nor carried on under the protection of the Indian Government. In order, therefore, to render the peration of the income tax as just as possible, Mr Wilson announced that in such cases as those above mentioned, the Indian income tax would not be charged.

At the same time it was announced that all soldiers and officers of the army and navy, whether European or Native, who receive less pay than the regimental emoluments of a captain, would be (quoad such income) exempt.

The various precautions taken to ensure the smooth working of the tax, to prevent its processes being vexatious or inquisitorial, were mentioned in the last letter. These have all been duly inserted in the Bill, which is now printed, and is before the whole Council. In the course of a few weeks we may expect to see this important Bill become law.

As to the temper of the Native public in the North-West, the recent accounts have been reassuring. Intelligence has been received from most of the principal stations, Lucknow, Allahabad, Meerut, Agra, Delhi, Lahore, to the effect that though the people are averse to taxation, in the shape of income tax or any other taxation, still they will submit quietly when they see that the Supreme Government has made up its mind, and has, after doing its best to remove reasonable objections, finally resolved to listen to no more murmurings. It is the spectacle of open resistance exhibited to all India by the Madras Government which has given heart to the objectors. Let this matter be once settled authoritatively, and the murmurings will subside. All India is now awaiting the decision of the Home Government on this point.* If that decision shall substantially support the Government of India, then every one expects that vigorous action will follow. When such action is accompanied by merciful consideration on all essential points, the result is never doubtful in India. The opinions of most of the leading administrative officers in those Provinces are known; and it is confidently believed that they anticipate no actual resistance; though there may be some discontent and some evasion, and also much addition to business. Whatever excitement had arisen appears to have subsided, except perhaps in Oude, where the new taxes are being actually collected. The various sinister symptoms which had begun to appear no longer manifest themselves, except perhaps in Oude. But even in Oude the authorities who have the best means of ascertaining and the greatest interest in knowing, believe that all *will* pass off quietly. Still it is not to be expected that the malcontents who prowl about the country will ever abstain from their congenial occupation of blowing the embers of discontent, and spreading lies about the intentions of Government.

The tone of the Bengalee Press is as much opposed to the new taxes as ever. The Bengalees of Calcutta, knowing themselves to be quite impotent for resistance, think to make up for that by incessant lamentations. Daily is the wailing and railing against the terrible income tax renewed by the newspapers that are the organs of the Baboos. Their cries for pity when they see the shears which are to be applied to the wool of their fat incomes are ridiculous enough. Did space permit, a few extracts from their Jeremiads would amuse you much. This barking may, however, be safely despised, as it is sure not to be followed by any bite. The tone of the Persian and Hindostanee Press all over India is quiet and proper.

The opinion of the European community at Calcutta continues as favourable as ever to the new measures. Trade is flourishing, and there is general confidence. The Calcutta Chamber of Commerce has passed resolutions expressive of their approval of the new measures. At Bombay there has been no opposition manifested by the *non*-official community. At Madras, however, the Trade Association have passed a resolution declaring their determination to oppose the income tax by every means in their power. Yet a month ago these parties were as favourable to the measure as could be expected. They have now determined to follow in the wake of the Madras Government.

Thus it is that some things are in favour of and some against the success of the new taxes; but, on the whole, the balance of pros and cons is decidedly on the side of the Government of India. The members of that Government are unanimous among themselves; and the resolve of Lord Canning to adhere to them has been declared. This positive

* This letter was obviously despatched before the news of Sir Charles Trevelyan's recall reached Calcutta. It was known there on the 9th June. —Ed. Econ.

declaration on his Lordship's part has found much favour in the eyes of the Calcutta community. The good sense and patriotism of the Legislative Council may be relied upon.

The report of the Select Committee of the Legislative Council on the Licence Bill has been presented. The Bill has not been altered on any essential point. There will be four classes of licences:—1, for professional people and wholesale traders, 10 rs a year; 2, for retail dealers, 4 rs; 3, for petty retail dealers, 2 rs; 4, for artisans, 1 r. But the system of licencing will not apply to the ministers of religion, the ministers of justice, and the officers and men of the army and navy.

The mode in which the tobacco tax is to be levied has also been decided. There is to be a special licence duty on dealers in tobacco. This method will not be so productive as others might have been. But, then, it will be accompanied by much facility of collection and very little interference with trade. It is of importance to facilitate the process at a time when all the fiscal authorities will be so much occupied in arranging the income tax. Already, too, a machinery for the management of licences exists partially, and will be still more complete after the general introduction of licences. A considerable sum will be yielded by the new tobacco licence duty, while there is every reason to hope that the levying of it, in this form, will prove easy in practice, and will create no popular discontent.—I am, yours, &c.,

R. T.

BANKERS' DIVIDENDS AND THE STAMP ACT.

The following important correspondence has passed between the Board of Inland Revenue and the London and Westminster Bank. The latter were in the habit of paying dividends to any person authorised by a shareholder, in an *unstamped* document, to receive them, and they only required the agent so authorised to sign a draught on demand, or cheque. It was suggested that the authorisation should be stamped as a warrant of attorney; but the Board have decided that in their judgment such is not the case:—

"Inland Revenue, Somerset House, July 13.

"Gentlemen,—I have laid before the Board of Inland Revenue your letter of the 4th inst., and in reply I am directed to state that the document enclosed therein marked 'A' is chargeable with the penny stamp, as a draught on demand. The document marked 'B' is a general direction to the company of which the person who signs it is a member to pay his share of profits from time to time to some person named therein, and it is not, the Board are advised by their solicitor, liable to any stamp duty. If it were a letter of attorney, as suggested, it would be chargeable with the stamp duty of 30*s*, unless the money to be received did not exceed 20*l*, or the annual payment of 10*l*. The authority of an attorney can only be conferred by deed.—I am, &c., "T. Sargent.

"Messrs Roy and Cartwright."

Document "B," referred to in Mr Sargent's letter:—

"This order must be signed by all the parties in whose names the shares are standing, and their addresses added,—

"'To the Secretary of the London and Westminster Bank.—Be pleased to pay all dividends and bonuses now due, or hereafter to become due, to on the shares standing in name in the books of the London and Westminster Bank, to until this authority is revoked in writing.—Dated the day of 185 .

"Proprietor's name.....

"Address....."

Agriculture.

THE STATUS OF TENANT-FARMERS.

Before all things, security of tenure is necessary to the success of any man who undertakes the business of a farmer. Moreover, he must have such a command of capital as will enable him to manage and cultivate his farm in an effective manner. But capital is of comparatively little use to the tenant-farmer whose terms of holding do not justify him in making the proper investments, and the securest tenure will be of little use to the farmer of deficient means. When, therefore, a contract is made for the lease of a farm, it is the interest of the landlord to ascertain that his intending tenant is a man of sufficient capital, and it is with the tenant a matter of necessity to obtain such a lease as will afford him the opportunity of expending his capital on the farm with energy and prudence. These are the primary conditions of agricultural progress. These being secured, the most intelligent and best educated farmer will, as a rule, have the best expectation of success. Without them, all the knowledge applicable to husbandry, to which any amount of study and training can attain, will be of little avail. In their absence the farmer becomes a mere dependent of the landlord, subject to his merest caprices, and liable at any moment to be altogether deprived of the business by which the tenant-farmer seeks to gain his livelihood. This is the actual position of a large proportion of farmers in England. It is the precarious and dependent state in which tenant-farmers carry on their business which prevents the advance of husbandry, and excludes from its pursuit the most enterprising and independent men of the trading classes. This is not so much the case in Scotland, because, from the universal practice of granting leases of farms, however imperfect such leases may be in many respects, farmers have come to be far less dependent on their landlords than are the English farmers.

Now with some writers and talkers it has become a habit to attribute all or most of the bad husbandry to be seen in all our rural districts to the ignorance and prejudices of the tenant-farmers, but, without denying that ignorance and prejudice are more prevalent than is desirable, we do not hesitate to say that bad farming is far more commonly attributable to the mismanagement of the landlords than to the ignorance or prejudices of the farmers. Most farmers know how to farm better than their practice indicates, but for want of capital, or want of security, or both, they fall into an inferior system from which it is not easy to escape. We have reverted to this subject from noticing two letters lately published in the *North British Agriculturist* disapproving of our remarks on "agricultural diplomas," and which, with some defect of perception on the part of the writers, assume that we "propound a doctrine that improved agricultural training would be utterly lost on a farmer." So far from that being the case, we have always urged as one of the reasons for improving the tenure and stipulations on which farms are let, that men of more education would resort to farming as a business than can be the case under the actual system. What we object to is, the building the hope of agricultural advancement on college degrees or diplomas, while the foundations of the edifice, security of tenure and rational contracts, are quite overlooked by these would-be advocates of scientific education for farmers. It must not be forgotten that farming is a trade, and, as in other trades, capital, prudence, and common sense far more generally lead to success than the highest scientific attainments. At all events, security is the indispensable requisite to the farmer. What avails the most ample knowledge, scientific or practical, of all that relates to his business to a farmer whose farm constitutes a game preserve, and whose operations are controlled by gamekeepers? or whose system of husbandry is defined by cropping and restrictive covenants, or regulated by the landlord's agent? Yet on these points our critics seem scarcely out of their rudiments. Thus the "Practical Farmer" says:—"The man who sells a thing is only anxious to get the largest sum he can for it; the man who lends anything looks to prevent deterioration in what he lends. Good landlords do this, and, while wishing for fair value, are more desirous to have men of character as tenants than those who promise large rents; and no honest tenant ever objects to sign conditions against deterioration. The landlord who lets his land on fair terms can ask this; his tenant of character may die before many years of the lease is [are] run; his heir may be an uninformed young man of no capital or energy —*the restrictions prevent unusual deterioration.*" Now this is directly contrary to English experience. Whatever may be intended, restrictions do not prevent deterioration, while they greatly interfere with and largely prevent improvement. The views disclosed in the paragraph we have quoted are precisely those under the influence of which farmers have been rendered so dependent. No allowance is made for the operation of self-interest on the part of the farmer, nor for the fact that it is only by good management of his farm that his own interests can be advanced. It is assumed that nothing but stringent regulations made by the landlord can prevent deterioration of the farm.

The other correspondent corrects our statement that farmers' sons do not frequent the Cirencester College. We are glad to hear it, though that was not so at one time. We offer the statement of the writer, a member of the College. He says "That, as a rule, farmers' sons took the lead of other students; for at the half-yearly examination in June 1855, out of about eighty students then examined in Practical Agriculture, the *first four* were farmers' sons; in Agricultural Chemistry, the *first two*; in Geology and Zoology, the *first three*; in Veterinary Medicine and Surgery, the *first two*; in Civil Engineering, the *second and third*. The first Laboratory prize and *all* the Essay prizes were awarded to farmers' sons; and out of the five who at that time gained their diploma, three were farmers' sons, and of the others one has since become a farmer. From the above, therefore, I think I have fairly proved that the R. A. College of Cirencester is not a failure as far as regards farmers' sons, of whom there is no want." And after citing Mr Mechi as "an agricultural pioneer," the College member says:—"Two contemporaries of my own (both farmers' sons), upon leaving College after having taken high degrees, were immediately appointed land agents, one to the late famous Philip Pusey, the other to Lord Falmouth; and numerous instances could I give of others holding equally high positions." This bears out our remark that it is as affording a stepping-stone to land agencies and the like that the promoters and advocates of "agricultural diplomas" most regard them. This is quite a different question to the value of such honorary degrees to the genuine, rent-paying tenant-farmer. And further on the latter writer expresses his surprise that Scotchmen who have been educated at Cirencester and had shown decided ability there, "should

shut themselves up and not come forward for the diplomas offered in their own country." Now, Scotchmen, of all classes, are not supposed to undervalue educational training, and their indifference to the Highland Society's diplomas may be fairly regarded as a test of their opinion as to the practical value to farmers of such distinctions.

After writing the above, we received from a correspondent some particulars of the system and examinations in use at the Cirencester Agricultural College. The course of study is a very good one, and we should be glad to see a considerable number of English farms occupied by men who have had the benefit of such training; but until the relations of tenant-farmer and landlord have been placed on a sounder and more commercial basis than they at present rest upon, we doubt whether many of such students will adopt husbandry as a business by becoming tenant-farmers.

Literature.

On Taxation. How Raised and how Expended. By Leone Levi, &c. J. W. Parker.

There is nothing very original or very strong in this book, but it is a clear and, with a few exceptional errors and questionable estimates, a pretty correct statement of the Imperial revenue and expenditure of Great Britain and Ireland. The author is far too moderate and sagacious a man to give in his adhesion to the views and plans of the Liverpool Financial Reformers; but, on the other hand, he adopts with far too little consideration the old commonplaces of the Economists of twenty years ago. Thus he repeats the nearly exploded argument of the excise on paper being a tax on knowledge and a barrier to the march of mind. He condemns the duty on fire and marine insurance, in spite of Mr Coode's unanswerable report, showing that the tax is absolutely infinitesimal and *unfeelable*, seldom amounting to one farthing in the pound, or from one thousandth to one two-thousandth part of the value of the property insured;—and that in the course of the last 25 years the aggregate sums insured, in defiance alike of tax and premium, have risen from 500 to 1,000 millions. His remarks upon the relative desirableness of direct and indirect taxation, appear to us somewhat trite, feeble, and superficial; for though he would retain the latter as convenient, existent, and customary, he does not seem adequately alive to its real and permanent recommendations, and hints in more than one place that its retention must be regarded rather as a concession to ignorance and weakness, than as just and judicious in itself. There is a trifling but careless mistake at p. 78, where he includes *pepper* as one of the articles which was made free by the recent tariff alterations;—the fact being that the duty on this commodity remains unchanged. At p. 198, is another error: he gives the retiring allowance allotted to the civil servant after ten years' service at *one-fourth* of his salary;—it is, in fact, under the last Superannuation Act, only *one-sixth*. He appears too (p. 27), in comparing the taxation of various kingdoms, to include the United States among *European* countries, and also to make a much graver though more common oversight, in calculating only the *Federal*, and omitting all consideration of the *State*, taxation of the American Union. At least we conclude so;—for he gives the total *revenue* as 17,000,000*l*; whereas in 1858-9, the receipts from Customs' dues alone was 64 millions of dollars, or 13,000,000*l* sterling,—besides the proceeds of land sales, which was considerable.

Professor Levi's estimates of the aggregate wealth of the country and the distribution of the taxation among the several classes of the population, would have been more satisfactory had he given us his authorities or the bases of his calculations. His figures appear to us to be chiefly taken, without acknowledgment, from an elaborate, and we doubt not in the main accurate, paper which was published in the "Edinburgh Review" for January last. In some respects, however, his proportionate figures do not quite tally with those given by that journal; and though both are to a great extent conjectural, the latter seem to us the most carefully worked out, and probably the most reliable of the two. The Reviewer calculates that the upper and middle classes—whom for fiscal purposes it is really impossible to separate—pay yearly 6*l* 17s 4d per head, or 16 per cent. on their average incomes, and the working classes 22s, or 11 per cent. The Professor's estimate is as follows:—

	£	s	d			
Upper classes	22	0	0	per head, or	12	per cent.
Middle classes	3	9	0	—	11½	—
Working classes	1	1	0	—	14	—

The discrepancy arises in part from a different calculation as to the earnings of the labouring poor, and in part from an error into which Mr Levi has fallen with reference to the amount of local taxation, which is really *fifteen* millions, but which he puts down at only twelve millions.

Our author's estimate of the aggregate wealth of the country is also, we have little doubt, excessive. He calls it 6,000 millions; and the Reviewer, whom he appears to have followed, gives it at nearly the same sum, and when considering merely the *taxable* income of the country, the figures may not be very excessive. But Mr Levi has overlooked the fact that the estimate of the "Edinburgh Review" (besides being open to question on another point) includes the National Debt,—which, though yielding a taxable income, can assuredly not be regarded as a portion of, or as adding to, the national *wealth*.

After making all proper allowance, however, for these oversights and defects, the book we are reviewing contains a large amount of useful information, conveyed in a compendious form. We subjoin a few of the more interesting tables:—

I.—Progressive Increase of Wealth in the United Kingdom.

Year.	Population.	Estimated amount of wealth, exclusive of the National Debt. £	Estimated wealth of the population per head. £	Increase per cent.
1801	16,000,000	1,800,000,000	112	...
1811	18,000,000	2,100,000,000	116	16
1841	27,000,000	4,000,000,000	150	94
1858	29,000,000	6,000,000,000	206	50

II.—Relation of Taxation to Population.

Years.	Population.	Taxes. £	Amount of taxes per head. £ s d
1801—10	17,000,000	57,000,000	3 7 1
1811—20	20,000,000	74,000,000	3 14 0
1821—30	22,500,000	58,000,000	2 11 6
1831-40	25,500,000	51,000,000	2 0 9
1841—50	27,000,000	55,000,000	2 0 8
1851—58	28,500,000	60,000,000	2 2 1
1859	29,000,000	66,000,000	2 5 0

III.—Relative Amount of Taxation supported by the Upper, Middle, and Working Classes—Public Taxation, in 1858, 61,800,000*l*; Local Taxes, 12,000,000*l*.

	Total taxation. £	Upper classes. £	Middle classes. £	Working classes. £
Customs—				
Tea	5,200,000	900,000	1,900,000	2,400,000
Sugar	6,000,000	1,350,000	2,230,000	2,420,000
Tobacco	5,500,000	1,000,000	2,000,000	2,500,000
Wine	2,000,000	1,000,000	1,000,000	...
Spirits	2,300,000	700,000	900,000	700,000
Other articles	4,000,000	700,000	1,500,000	1,800,000
Excise—				
Malt and spirits	15,000,000	3,000,000	5,000,000	7,000,000
Licences	1,500,000	300,000	700,000	500,000
Paper	1,300,000	400,000	700,000	200,000
Carriages	500,000	100,000	300,000	100,000
Hops	500,000	100,000	200,000	200,000
Stamps	8,000,000	3,000,000	4,500,000	500,000
Assessed taxes	3,000,000	2,000,000	1,000,000	...
Income tax	7,000,000	3,000,000	4,000,000	...
Poor rates	6,000,000	2,500,000	2,500,000	1,000,000
Local rates	6,000,000	2,500,000	2,500,000	1,000,000
	73,800,000	22,550,000	30,930,000	20,320,000

The Quarterly Review. July. John Murray.
The Edinburgh Review. July. Longmans.

The new "Quarterly" is decidedly above the average of recent numbers as to permanent value and interest, though the lighter element is less fully represented. It is a characteristic feature of the age that the best of the Conservative party is turning its attention more and more from political to social questions. In the present number, less than forty pages are devoted to the political prospects of dogmatic Conservatism, and between seventy and eighty to the condition of the lower and higher labouring classes; and while the political programme seems to be summed up in abstinence from office and a careful "waiting upon Providence," the social campaign which is mapped out is of the boldest and most innovating character. The success, therefore, which appears to be claimed by the title of the political article,—"The Conservative Reaction,"—requires some qualifying interpretation before it is received as an index of public opinion. That the tone of that opinion is at present *Conservative*, is in one sense undoubtedly true; but it is in a sense entirely distinct from any success of the Conservative *party*. The triumphs of *Conservatism* in the present session of Parliament have been gained, as the writer himself admits, by the co-operation of large sections of the Liberals both in and out of the House, who have not abandoned their allegiance to the Liberal party, while giving effect by their tacit or open support to the otherwise helpless Conservatism of their political rivals. The success of the latter has resulted, as the writer himself admits, from their sinking their party cries and meeting their Liberal co-operators half-way. Thus, on the last division on the paper duties in the House of Commons, Mr Disraeli is blamed by the "Quarterly" Reviewer for departing from this policy. "A very combative speech with which Mr Disraeli closed the debate had the effect of making other adversaries of the bill from the Liberal side feel their partisanship too much stirred within them to give their votes against it. He is very apt to fall into the error from which few great masters of sarcasm are exempt, of preferring the glitter of a brilliant display to the gold of solid victory. On this occasion his strictures lost him several votes on the division." Those who remember the diatribe against Mr Disraeli in a former number of the "Quarterly," will be disposed to think that gentleman singularly unfortunate in incurring first the blame of not identifying himself with Conservative principles, and now of identifying himself too closely with Conservative partisanship. But there is balm in Gilead. Mr Disraeli may well hope to receive absolution for this last trivial offence, since his former and graver delinquencies are graciously condoned, if not forgiven—always under the supposition—evidently not a very assured one—of his permanent reformation. After dwelling on the practical exempli-

fication of the copy-book axiom that "honesty is the best policy" in the Conservative and Whig Reform-Bill misadventure, which, in the case of Mr Disraeli, "has thrust him from office, alienated his party, and paralysed his power at the very moment when Conservatism is in the ascendant in the House of Commons," the Reviewer continues:—

In our last number we ventured to make some remarks upon the recent vagaries of Conservative policy in the House of Commons, which have been far from unacceptable to Conservatives in general, but which have created no little flutter among the organs whose function it is to minister incense at the shrine of the last-named statesman. They have affected a tone of surprise, as though the Conservative objections to the policy of 1858 were some new thing, unknown in private society, unheard of upon the back benches of the House of Commons. It is not our intention to re-open a painful history, or to renew warnings that have done their work. But the remonstrances in which we have expressed the deep and wide-spread feelings of Conservatives throughout the country is no new language on our part. We have never held but one conviction as to the incongruity of Conservatives democratising the franchise. * *

We cannot think we have done evil service to the party, or even to Mr Disraeli himself, by plainly speaking out what every one was saying of him in private, and no one would say in public. It is a serious misfortune both to the Conservatives and their leader that their organs in the press refuse to themselves that latitude of criticism which Liberal leaders have to undergo at the hands of Liberal writers. The result is, that the Liberal leaders always know from independent testimony exactly what all sections of their followers are thinking—a species of information which only bursts at fitful and stormy intervals upon the minds of their Conservative opponents. Those who adopt for their rule of criticism, in all cases and under all contingencies, to praise Mr Disraeli, love him not wisely, though possibly too well. The quality of flattery is twice cursed—it curseth him that gives and him that takes. It is no kindness to a statesman to persist in assuring him that he is keeping the right road, when he is marching strait into a bog. If we may venture to add to these criticisms upon those who have criticised us so liberally, we should be inclined to say that they make a mistake in displaying so unreservedly the irritation caused by our remarks. To borrow a phrase from the vocabulary which recent events have made so familiar, they 'bruise' too easily. It is a pity that they should do so, because it gives wicked people the opportunity of applying the proverb, *Ce n'est que la verite qui blesse.* Extreme irritability on any particular subject is an eloquent symptom, to which it is never wise to call an enemy's attention. * * *

We will not pay the Conservative party the bad compliment of believing that their leader is now prepared to act on the principles which his thoughtless advocates avow. Whatever his past errors may have been, no reproach of this kind can be urged against his policy upon the important measures that have distinguished the session now drawing to a close. He has shown no inclination to flinch from the assertion of Conservative principles; he has made no attempts to boil them down to suit the palates of Radical allies. Mr Bright's ferocious denunciations betray his misgiving that the reckless ambition on which he once hoped to climb to power will serve his turn no more. We have a right to assume that the change is permanent, and that Mr Disraeli has abandoned for ever the 'unholy alliances' and the trimming tactics of which events have proved the hollowness and the shame. The *Times* has been overhasty in arguing as if any question of change of leadership were in agitation among the ranks of its opponents. The Conservative party applies its own principles to its own internal government. It loves not depositions and revolutions more within its own body than in the world outside. The organisation and discipline of those who compose it has been often admired by their antagonists, and has sustained many a searching shock that would have shattered to atoms a Liberal combination. It is not political reverses or years of exile from the Promised Land of office that excite their murmurs or weaken their allegiance. While the course along which they are guided is true to their creed, they do not inquire much to which side of the Speaker's chair it leads. They only ask to be led as men who are fighting, not that a few may enjoy the fleeting notoriety and the poor apology for power which office can confer, but for mighty principles, to which the happiness of millions yet unborn and an ancient empire's glory are indissolubly bound.

We congratulate Mr Disraeli on the new lease of confidence, under reserve, which he has obtained from the great Conservative party.

The two "social" articles to which we referred will repay perusal, particularly the former, entitled, after a book which supplies a large part of the materials, "The Missing Link and the London Poor." There is a breadth of treatment about it which is very refreshing in a Conservative organ, and an excellent symptom of increased liberality of thought in that quarter. There was a time not long past when any such *irregular* means of introducing Christian civilisation among our degraded city population would have been denounced as an heretical breach of clerical rights. We have seldom read anything more remarkable than the manner in which "Marian B.," the heroine of this true story, accomplished her voluntary and solitary work; and, making every allowance for possible exaggeration in the narrator, we cannot but think that a little of the wisdom displayed by this poor woman would be of immense benefit in high official quarters. She was herself a practical confutation of the axiom of Robert Owen, that men's characters are wholly formed by the circumstances in which they are placed. The child of a man who broke the heart of his wife and drank himself to death,—left alone in the world at the age of fifteen, with a young sister of five years old, in the midst of the misery and pollution of the worst dens of St Giles,—she not only passed unscathed through this ordeal, but became herself an instructor of the educated upper classes in the true way of rescuing others from the lowest social depths. Her own early associations of course gave her a powerful leverage to begin with, and disarmed the jealousy inherent in all classes of being advised by those socially above them. But one great secret of her success we take to be her invariable rule of not *giving away* anything; but making its acquisition the result of effort and self denial, to however trifling an extent. The Bibles which she thus disposed of for a trifling sum were first sought as a gratification of the sense of property,—were not sold for drink, because they had *cost* something to the owner; and in time, when the natural occasion offered, worked their own way into the minds and hearts of their possessors. Cleanly habits were introduced by agents equally simple, and equally based on the soundest rules of political economy. A more triumphant vindication indeed of the latter in contrast with the purely eleemosynary system it is impossible to conceive; and this, be it remembered, was the natural suggestion of a mind untutored in anything but the rudest lessons of daily experience.

The other social article, "Workmen's Earnings and Savings," forms a very appropriate and suggestive sequel to the former by showing how, while those who have the least advantages among the labouring classes may be made to rise in respectability and happiness by inducing the feeling of self-respect and providence those who have most advantages, in the highest and most certain wages, are exactly those who are least self-denying and provident. The statistics which the writer sets forth, availing himself to a great degree of a curious paper by Mr David Chadwick on the rate of wages in the manufacturing districts, might be studied with advantage by demagogues as well as philanthropists.

The article on the great Protestant scholar, "Joseph Scaliger,"—or to give him his real name, "Joseph Juste de l'Escale,"—is one of considerable length and remarkable ability. The incidental historical notices of the times in which the Huguenot Bentley had the misfortune to be thrown are extremely interesting, sound, and acute. This article will, we hope, be the basis of future biographies of the great scholar, whose life and character have been hitherto abandoned to the infamous calumnies of his Jesuit enemies.

The remaining articles are of inferior merit. The principal is on "Stonehenge," in which a Buddhist origin is suggested for Druidism. But the paper, though learned, is ill-arranged and desultory.

The "Edinburgh" has several articles of average merit, but none of marked ability. "M. Chevalier on the probable Fall in the Value of Gold" is criticised, the writer concluding as follows:—

It is impossible to assign any limits to the effects which must gradually ensue from a progressive change in the value of the commodity that has become by usage and by law the fixed basis of all contracts—a change, we venture to say, scarcely less momentous to the conditions of our social economy, than an alteration in the material conditions of this planet would be to the physical existence of man. But there is one consideration, of a political nature, which strikes us as so curious and important, that we must devote a few lines to it before we conclude. The political franchise of the electors of the United Kingdom is mainly based upon the payment of rent. Be it more or be it less, the occupation of a dwelling of a certain value determined by the law, is the common test of electoral capacity. We will assume, for the sake of argument, that the ten-pound householder is still the main ingredient in the electoral body; but if the steady influx of gold produces the consequences anticipated by M. Chevalier and Mr Cobden, one of the first results will be an increase in the nominal value of houses, and, everything rising in similar proportions, the present five-pound householder will be gradually brought within the limits of the ten-pound franchise, though the rise of wages and of prices moving *pari passu* may in other respects have left his condition unaltered. Hence the effect of the gold discoveries and of the fall in the value of gold will be greatly to extend the political franchise, though it should remain nominally at the same figure; and if the extraordinary supplies of the precious metals, which have poured into Europe in the last nine or ten years, should continue, they will, by the operation of natural causes, gradually but irresistibly extend the basis of popular power.

That good will on the whole predominate, we believe; but let us not, on this account, close our eyes to the serious cost at which this preponderance of good will be obtained. As regards this country, it appears to us that the best means of lessening the evils of the crisis, is by giving timely warning of its approach. Much may be done in the framing of settlements, in the granting of leases, and in the selection of investments, to mitigate its severity; the grand rule being, to avoid as much as possible purely monetary securities. The foresight of Lord Burleigh, warned by the changes which he saw around him, effected in the sixteenth century the partial sub-titution of corn for money rents, and in this way the incomes of colleges and other institutions have been preserved, which but for this precaution would have long since dwindled into insignificance. The plan adopted under the Tithe Commutation Act, for regulating rent-charge by the price of agricultural produce, suggests another means by which the crisis may be moderated. A permissive law facilitating arrangements of this kind would be free from all objection on the score of justice, and might be attended with much public advantage. But what is of far more importance than any specific plan is that the public should be made aware of the principles which are in operation, and of their inevitable tendency. When the tendency of the gold movement is fully recognised, means will not be wanting for anticipating, and, as the phrase is, "discounting" its effects; and, in proportion as this is done,—in proportion as its influence is distributed over a wider area of interests and over a longer period of time,—will the inequalities with which it is fraught be corrected, and its inevitable hardships alleviated.

Besides articles of special book-criticism, there are two well-written papers on the connecting history of "France and Lorraine," and "the Patrimony of St Peter," and one suggested by Prince Dolgoroukow's book on Russia, in which the subject of Russian serf-emancipation is sensibly discussed. The last paper, in which the arguments for the ballot are dissected, and the arguments against it set in forcible array, concludes with the following advice on the subject of "Reform," which we may conjecture embodies the actual opinion generally prevalent in the House of Commons—if not in the country—at the present time :—

Our own opinion is that it will not be prudent to embark the credit of an Administration in another Reform Bill, without a much clearer demonstration of its chances of success than any which attended the Bill which has just expired; for although such attempts do surely, in the end, bring round the right result, ultimate success may be purchased too dearly by disparaging the position of a minister and diminishing the respect due to the deliberations of Parliament. If the attempt is to be renewed, it must be on narrower ground. The tone of Parliament and of the country will not sustain Parliamentary Reform on the level of a first-class question; and it is but beating the air to fill the leaden ear of the constituencies with the high-sounding phrases of 1831. By judicious and gradual legislation, by dealing with the question as one of administrative adjustment instead of one of organic change, it is possible that much good might be effected; and this course would go far to allay the uncontrollable panic which seizes all members on the announcement of another great measure of Parliamentary Reform. A revision of the system for the registration of votes; the appropriation of the four seats now vacant; the disfranchisement of some other boroughs convicted of gross corruption, which would place other seats at the disposal of the Legislature; and some other practical measures of a similar character, are perfectly attainable objects. And we are inclined to think that more would really be gained by gradual, though partial, improvements in the working of our Parliamentary constitution, than by abortive attempts to carry sweeping measures which threaten to alter the balance of social power, and which lay claim to a character of finality they can never really possess. It is not for us to bind futurity, but to perform the work which the present time calls upon us to do.

The fate of the schemes of Parliamentary Reform propounded in the last and in the present Session, remind us that we have lived more than a quarter of a century since their great predecessor was carried. New men and new things, new thoughts and fashions, new tendencies and tempers, railroads and electric telegraphs, free trade and Whitworth cannon, and many an opinion and many an invention besides, have spread their influence over that eventful interval. The Reform Bill of 1832, in its results, is a living triumph; but the atmosphere in which it was carried to victory has been swept away for ever. The resounding periods which spoke its praises, and which went with such electric power to enthusiastic crowds in that excited time, raise the pulse and stir the blood no longer. The entrancing rapture of our boyhood is not to be recalled; the words and scenes are the same, but the sympathies, the associations, the yearnings they appeal to, are all changed. It is as well as it is. We have other duties—some sterner, some more practical—besides and beyond the question who are to vote for members of Parliament in a country in which the franchise, as well as every other social and political distinction, may be acquired by every man who will devote his industry and intelligence to the acquisition of political rights. It was fortunate that we set our Commons House in order when we did; the time seems shortly coming when we shall be engaged in more active and world-wide contention, and our best energies should be spent in making sure that we be ready to play our part when that hour arrives.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

Article 2 of the commercial treaty, after enacting that the import duty in France on British coal and coke shall be reduced to 15c the 100 kilogrammes, says, "The Emperor engages within four years from the date of the ratification of the present treaty to establish upon the importation of coal and coke by land and by sea a uniform duty, which shall not exceed that fixed by the preceding paragraph." In the *Moniteur* of this morning there is an Imperial decree, which, without referring to the treaty, enacts that "the duty on the importation of carbonised coal by the river Meuse and the department of the Moselle shall be 10c the 100 kilogrammes; and that *the duty by all the other frontiers of the land and sea* shall be 15c the 100 kilogrammes." In the tariff coal has hitherto stood thus: "By sea from Sables d'Olonne exclusively to Dunkirk inclusively, 30c the 100 kilogs by French vessels, 80c by foreign; by other parts of the coast by sea, 15c and 65c; by land from the sea to Halheim exclusively, 30c; by the river of the Meuse and the department of the Moselle, 10c; and by all other parts, 15c." The duties on coke were one-half more than the preceding. All these duties being done away with by the decree, all countries can now send coal and coke into France on the same terms as England. By the way, the treaty says that English coal, in addition to the 15c shall pay the "two decimes" which are imposed on French taxes. The decree says nothing about those decimes, but they will be levied as a matter of course. Another decree abolishes the export duty of 1c the 100 kilogs heretofore levied on coal and coke.

In my letter of the 14th, I stated that the Government bill for removing the prohibition to export rags, and replacing it by a high duty of nearly 5*l* per ton, encountered such opposition that it was not likely to be carried. The session of the Legislative Body has just concluded, and the bill has not passed; the Government has deemed well to let it drop. Yet the Council of State had consented in the hope of saving the measure to increase the duty from 12f to 18f the 100 kilogs—that is, to 180f, or 7*l* 4s the ton. In this rag affair the French have undoubtedly displayed an illiberal and ungenerous spirit.

The Superior Council of Commerce charged with the investigation which has been rendered necessary into the different branches of English and French manufactures previous to the transformation of *ad valorem* into specific duties as stipulated by the commercial treaty is still continuing its labours, but hopes, I believe, to complete them towards the middle of next month. The evidence it receives both from English and French practical men is of the very highest interest, but is unfortunately not published. From a glance at some of the last proof sheets of the reports with which I have been favoured, I notice among other things, that in a sitting devoted to an inquiry respecting machinery, at which M. Michel Chevalier presided, Mr Platt, of Oldham, showed very clearly that for the advantage of France herself English machinery ought to be admitted either duty free, or at the lowest figure possible. This he demonstrated by stating that Belgium, by imposing only a moderate duty on English machinery, had brought it into pretty general use in the cotton manufactory; and the consequence is, that she has increased her operations, and has actually been able to find a market for her grey calico at Manchester. To the same cause he ascribed the marked development which cotton manufacture has taken in Russia. He stated that French machinery is decidedly inferior to that of England, and works much slower. He showed that from this reason an English mill of 30,000 bobbins pays in wages only 1,807f a week, whereas a French one of the same importance pays 2,944f. With English machinery he said that French spinners could do with a very moderate protection; that in fact some of them had admitted to him that they would be satisfied with 15 per cent. He was asked by M. Michel Chevalier, "Suppose there were in France only a very moderate duty on the import of cotton yarn, would you hesitate to take an interest in an establishment fitted up with your machines?" and he said that he should have none.

The following is an analysis of the last Customs returns :—The total of import duties received in June last was 11,968,682f; whilst in the corresponding month of last year it was 18,667,336f, and in that of the year before, 19,581,141f. For the first six months of the present year the duties were 69,181,341f; same period of last year, 95,206,603f; and of 1858, 93,339,317f.

The depression which has prevailed in trade during the last six months, owing to political anxieties, has naturally had some influence in producing this decline, but the principal cause of it is the extensive modifications which have been made in the import duties on certain objects, as will be seen from the following :—

	First six months of 1860.	First six months of 1859.	First six months of 1858.

The shareholders of the coal-pits of La Grand 'Combe, which are among the most important in France, have just held a meeting, at which an account of the operations of 1859 was given. The profits, after deducting various payments for loans, the reserve fund, &c., were stated to be 1,640,085f, and they were sufficient to allow a dividend of 70f per share to be declared, but it was resolved to distribute one of only 60f. The quantity of coal extracted was 397,752 tons; in 1858, it was 347,044 tons; 1857, 446,561 tons. The sale, including the consumption of the company, was 395,563 tons; in 1858, it was 363,513 tons; 1857, 432,000 tons.

The Bourse was a good deal affected by the news from Syria, and by the fear that the intervention which the French Government ostentatiously announced the intention of exercising might lead to a serious misunderstanding with England. But during the last two days confidence has been somewhat revived by the assurance that the two Powers will act together in that country, though not on the same scale; and that the Porte has consented to their intervention.

The following are the week's quotations :—

The following is an account of the markets :—

FLOUR.—The quotations at *Paris*, yesterday, were 62f to 66f the sack of 159 kilogs,—a rise on the previous week's prices of 1f for the lower qualities; no change in the higher. Four marks were lower; current month, 62f 50c to 63f; August, 63f to 63f 50c; September, 63f 50c October, 65f 50c.

WHEAT at *Paris*, yesterday, was 35f to 39f the sack of 120 kilogs, a rise on last week's quotations. Of the provincial markets, 49 present a fall of from 10c to 1f 85c the hectolitre; 36 a rise of from 10c to 1f 33c; and 37 remained unchanged.

COTTON.—The sales in the week ending Friday, at *Havre*, were 7,704 bales, and the arrivals, 11,409. No change took place in quotations; low New Orleans remaining at 85f the 50 kilogrammes, and very ordinary ditto at 94f. This week's business has not been active, and prices are the same.

COFFEE.—In the week ending Friday, at *Havre*, a fair amount of business was done: 1,900 sacks Port-au-Prince disposable went at 78f the 50 kilogs in bond, 200 Cape Hayti 80f 50c, 4,500 Rio not washed 71f to 76f, a small lot of Ceylon plantation 125f to 130f duty paid, and a small lot of French West Indian 132f 50c to 135f. Various lots of sound and damaged were also sold by public auction. The arrivals were important, exceeding 27,000 sacks. This week there have been several sales: Rio at 73f to 75f in bond, Malabar 107f 50c duty paid. At *Bordeaux*, last week, this article was completely neglected by speculators, and the purchases for consumption were not large. In addition to the sale of Guayra mentioned in last week's ECONOMIST, 200 sacks Mysore went at 117f 50c. This week a small lot of Santiago has been taken at 100f the 50 kilogs. At *Nantes*, last week, nothing was done beyond the sales of damaged recorded in last ECONOMIST. This week, a lot of Reunion, "fève pointue," has been taken at 125f.

SUGAR.—At *Havre*, in the week ending Friday, prices fell. 570 casks French West India disposable, went at from 48f 50c the 50 kilogs, down to 47f 50c duty paid; 360 ditto at 48f 25c, and 49f 25c; 50 ditto usine, 54f; 48 casks Havana, 38f 50c the 50 kilogs. The arrivals exceeded 6,000 casks. This week various small lots of French West India have been sold at 48f 50c; some usine at 50f. At *Bordeaux*, last week, there was a fair demand; about 500 hogsheads French West India went at 47f to 49f, the greater part at 48f to 50c; 5,736 bales Reunion, 52f. This week a small lot of French West India has been sold at 47f 25c. At *Nantes*, last week, sales were numerous, and prices advanced; the closing quotations being—Reunion, 51f 25c to 52f; Mauritius, 53f to 53f 50c; French West India, 48f 75c to 49f. This week a quantity of Reunion has been sold at 51f 25c to 51f 50c; and some inferior French West India at 42f; some usine ditto, 50f 50c; a small lot of Java, 59f.

INDIGO.—At *Havre*, in the week ending Friday, only about 20 cases Bengal disposable were sold, and the prices were kept secret. Only 4 cases have been sold this week, and prices are not mentioned. At *Bordeaux*, last week, affairs were not important, but prices were firm. The sales of this week consist of 9 cases, prices kept secret.

TALLOW.—No sales were made at *Havre* in the week ending Friday, but 435 casks were received. This week there have been no sales. At *Paris*, yesterday, the 100 kilogs were 141f 25c—a rise of 1f 25c.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg. first quality, was 100f the hectolitre; Montpellier of 86 deg., 130f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 130f; and beetroot, 100f.

HIDES.—At *Havre*, in the week ending Friday, business was somewhat more active. 865 Monte Video salted went at 82f 50c to 50 kilogs duty paid; 4,750 Uruguay salted, for delivery, 80f; 886 Maragnan dry salted, disposable, 97f 50c; 2,600 Valparaiso salted, and 500 New York, at prices kept secret. Some sales of sound and damaged were also made by auction. The arrivals were numerous, exceeding 25,000. Sales have been numerous this week. New York salted, 53f; Rio Grande dry, 135f; La Plata salted, 82f 50c; Lima, 110f; Tampico dry, 107f 50c; Uruguay salted, 80f; Pernambuco, 97f 50c; also a lot of Monte Video horse salted, at 100f the 100 kilogs; and one of Buenos Ayres dry, at 10f each.

WOOL.—At *Havre*, in the week ending Friday, the demand was active, and prices firm. 481 bales La Plata, unwashed, went at 1f 20c to 2f 85c the kilog; 12 bales ditto, washed, 1f 85c to 4f 25c; and 125 bales sheepskin La Plata, unwashed, 1f 25c to 1f 55c. The arrivals exceeded 1,000 bales. This week, a small lot of Buenos Ayres, unwashed, has been sold at 285f to 295f the 100 kilogs; ditto sheepskins, unwashed, 80f to 120f.

Dulness constitutes the prevailing feature in the cotton market, and we reprint the closing prices of Tuesday last. Transactions, though comparatively small, are in excess of the previous three days, but are chiefly made up of lots, at somewhat below the appended quotations. The first bale of new cotton appeared at New Orleans on the 3rd inst., from Texas. The sales aggregate 4,000 bales. We quote:—

NEW YORK CLASSIFICATION.

	Upland.	Florids.	Mobile.	New Orleans and Texas.

The cotton market has been extremely dull this week, and almost all classes and qualities of cotton have again slightly given way in price. The trade have bought much less than their consumption, and the business done for export and speculation is less than for several weeks past. The supply on the market continues abundant, and the import has nearly balanced the deliveries. We have reduced our quotations for American, Egyptian, Brazil, and East India generally, ⅛d per lb. The sales to-day are 7,000 bales. A quiet market. The reported export amounts to 10,950 bales, consisting of 4,820 American, 30 Brazil, and 6,100 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

An increased amount of business has been transacted in the manufacturing districts this week, for shipment both to India and China, at very full prices. There has been rather more inquiry on continental account; but the business done has not been to say extensive. The home trade for goods is remarkably healthy. In the iron districts, the transactions have been only to a moderate extent, on rather lower terms. Coals have ruled dull; but the value of wool still continues very high.

MANCHESTER, July 26.—There has been a greater disposition for business at low rates, and though prices, especially for yarn, are still very irregular, the tone of the market has been more cheerful. Buyers for China and Bombay have still been operating, and the class of goods affected by such operations, though they had perhaps declined the most, show now the most prominent symptoms of steadiness. In yarns for the Continent there has been a moderate business at easy prices, and in cop yarns for home manufacture there has been a rather extensive business, spinners having given way on an expectation, or rather an experience of lower cotton, and secured a considerable number of orders in advance. There has been in cloths a fair general accession of orders from the smaller markets.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

HUDDERSFIELD.—Stocks are not very heavy, and the manufacturers throughout the district are fully employed generally. Wools very firm, and so are most other kinds of raw material.

HALIFAX.—There is very little alteration to report in the worsted trade of this district. There is but little animation in any branch of it, and only a very moderate extent of business has been transacted during the week. In piece goods a rather languid tone prevails, and for worsted yarns the demand is very limited, and the business done is almost exclusively to order.

BRADFORD.—Wool—The market is very flat and quiet. Upon bright-haired sorts a fall of 10s from the highest point has been established. In noils and shorts trade keeps steady both in demand and price. Yarns—There is not much change in this department. Spinners are for the most part engaged to order. There is, however, a fair demand for export. The home trade is rather quieter. There is no alteration in prices. Pieces—There is a little more doing, but the manufacturers still complain of the the want of orders, which in former years have been more general than at present.

LEICESTER.—Considering the time of the year there is a fair amount of business doing in the hosiery trade, and business generally is in a healthy and satisfactory state. Goods suitable for the season are in request, and stocks on hand are by no means heavy. At Loughborough and other frame-work knitting districts trade is tolerably active. Yarns are without material change. Wools are extremely high, but the market is quiet.

NOTTINGHAM.—There is about the same amount of business doing this week as last, and, considering the time of the year, trade is without much change from former years. There is a fair demand for stiff plain nets and common Paris goods; there are also a few orders in the market for Mechlin quiltings. As respects cotton fancy goods, threads, Saxonies, and muslins are in slight request. The silk lace trade is without important change.

ROCHDALE.—The state of trade is steady, and, on the whole, pretty satisfactory. The prices of wool remain firm, and there is a tolerably fair demand. In the market for flannels there is, if anything, more eagerness on the part of buyers than sellers. The latter have a good number of orders on hand, and are not very willing to enter into fresh contracts except at an advance. The price of flannel compared with last year at this time is stated to be from 6s to 7s per piece higher. The Yorkshire trade continues tolerably good, and prices are unaltered.

BIRMINGHAM.—There are few artisans in the town out of employment, and most of them are working average time. In the manufacturing towns of the district trade is also in a satisfactory state; most of the large works are in full operation.

WOLVERHAMPTON.—The trade done in pig iron has been very moderate. We have no change whatever to notice in price. The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latten, 12*l*; boiler plates, 9*l*; best and best best in proportion; common

rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*, and all other sorts in proportion. Welch bars, 5*l* 10s to 5*l* 12s; rails, 5*l* 5s. Current prices of pig iron:—Staffordshire cold blast, 4*l* 5s; best native hydrate pigs, 3*l* 12s 6d to 4*l* 2s 6d; first-class all mine grey forge pigs. 3*l* 7s 6d to 3*l* 12s 6d; good mine pigs, with a modicum of flue cinder, 2*l* 17s 6d to 3*l*; mine pigs, deteriorated by cinder, 2*l* 12s 6d to 3*l*; Cleator Moor hœmatites, 3*l* 11s 6d to 3*l* 12s 6d; Workington hœmatites, 3*l* 11s to 3*l* 12s 6d; Kirkless Hall Hœmatites, 3*l* 10s to 3*l* 12s 6d; Barrow hœmatites, 3*l* 12s 6d to 3*l* 15s; grey forge cinder pig iron, 2*l* 10s to 2*l* 15s; white forge cinder pigs, 2*l* 5s to 2*l* 10s; melters, Nos. 1, 2, and 3, 2*l* 15s to 2*l* 17s 6d; superior makes of all mine melting iron, 3*l* 7s 6d to 3*l* 17s 6d, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 5s; Northern hœmatites, from 3*l* 10s to 3*l* 15s, according to brand and quality.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, July 14.—Flour.—The demand has been moderate for State and Western flour, with prices slightly fluctuating. The sales for the three days aggregate 36,000 bbls, the market closing firmly for extra State, and steady for other kinds. Canada flour has been in steady, fair request, at unchanged rates, and the sales for the three days comprise 2,300 bbls, including 800 yesterday. Southern flour has been dull and heavy, and sales were effected at a reduction from previous rates of 10 to 25 cents per bbl. Transactions since Tuesday aggregate 4,700 bbls, the market closing heavily, and with a declining tendency, at 6.25 dols for Brandywine, 5.75 dols to 7 dols for Georgetown, and 6.50 dols to 7.75 dols for Petersburg city. Other kinds are unchanged. Export from the 1st to the 10th of July, 63,296 bbls, against 20,790 bbls in 1859.

Grain.—A moderate inquiry prevailed for all kinds of wheat on Wednesday and Thursday, both for consumption and shipment, at prices slightly favouring the purchaser, but an active demand sprung up yesterday, mainly for speculation and export, and the sales were heavy at full prices. The new crop is being harvested in the West, and small quantities of new wheat have already changed hands, among which we notice one car-load of white winter, on track, in bags at Chicago, at 1.35 dol per bushel, and another, in store, at 1.25 dol. Freights at that place are firm by sailing craft, which are scarce. The last rates paid were 6¼ to 7 cents per bushel for corn through to Buffalo. The sales for the three days aggregate 191,000 bushels. The corn market has been more or less vacillating during the past three days, but the demand has been fair, and the sales pretty heavy, amounting to 260,000 bushels at 61 to 63 cents for Western mixed, mostly at 62 cents; other kinds are without important alteration from former quotations. The market closed upon an active demand. Export from July 1 to 10: wheat, 437,052 bushels; corn, 91,507 bushels, against 12,249 in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Somewhat increased supplies of home-grown wheat have been on offer in most of the markets held this week; nevertheless, owing to the changeable state of the weather, and the backward state of the crops throughout the Kingdom, the demand for both red and white qualities has ruled somewhat active, at an advance in the quotations of from 1s to 2s per quarter.

The same amount of improvement has been paid for foreign parcels, in which, however, the business done has not been extensive. The late heavy arrivals off coast have checked the demand for barley; hence, prices have had a drooping tendency. There has been only a moderate sale for malt, on former terms. The oat trade has continued in a healthy state, at very full prices. Both beans and peas have ruled tolerably firm, and country flour has commanded 1s to 2s per 280 lbs more money.

Advices from the United States are to the effect that nearly the whole of the wheat has been secured in the West, in full average condition, and that liberal supplies of both wheat and flour were in progress of shipment to England. On the Continent, wheat has further improved in value, and most other articles have realised extreme rates. The exports from the Lower Baltic ports are still large, and the stocks held are represented as seasonably extensive.

The Scotch markets have exhibited very scanty supplies of wheat, which, for the most part, have changed hands on higher terms. Barley, oats, beans, peas, and flour have sold steadily, at full quotations. The stocks of produce in the hands of the growers have become very limited.

In Ireland, all kinds of wheat have produced more money, with an improved consumptive demand. Most other articles, however, have moved off slowly, at about previous rates. The shipments to England are trifling.

The few samples of English wheat on sale here, to-day, were a dull inquiry at almost nominal quotations. Foreign wheat, owing to unusually large arrivals, was heavy, and rather cheaper. Barley sold slowly at Monday's decline; and oats gave way 6d to 1s per qr. In the value of other produce no change took place.

Mr E. Rainford thus reports the state of the floating trade:—Since the 19th inst., 26 grain-laden vessels have arrived off coast for orders, consisting of wheat, 1 cargo from Galatz, 1 New York, 1 Marianople, 1 Berdianski, 1 Odessa, 1 Constantinople, 2 Philadelphia, 2 Marseilles; rye, 1 from Galatz; maize, 2 from Ibraila, 1 Salonica, 1 Giurgevo, 2 Sulina, 1 Odessa, 1 Corfu; barley, 1 from Ismail, 2 Sulina, 1 Ibraila, 1 Constantinople, 1 Taganrog; beans, 1 cargo from Larache. Of these, 3 or 4 were previously disposed of. There has been an animated business in floating cargoes since this day week, at improving prices till the last day or two, in which less has been done owing to the fine weather, and the upward movement in maize is at present arrested. The following prices have been paid for wheat per 492 lbs:—Berdianski, arrived, 54s 4½d, 55s, 55s 6d, and 56s; Taganrog Ghirka, 53s to 54s; Odessa Ghirka 50s 6d, 51s 6d, 53s, and 53s 6d; Sandomirka, arrived, 55s; Galatz, 51s 6d; Ibraila, 48s 6d and 49s per 480 lbs. On passage, Berdianski, forward shipment, 56s per 492 lbs; Polish Odessa. May shipment, 54s per 480 lbs. Shipping or to be shipped, Odessa hard wheat at 50s 9d; and Marianople, to be shipped up to end of September, at 55s 6d per 492 lbs. Maize, arrived, Galatz at 31s, 31s 9d, and 32s; Reni, 31s 6d; Odessa, 31s, 31s 6d, 31s 7½d, and 31s 9d; Foxanian, 2 cargoes at 32s, all per 492 lbs; Ibraila, arrived, at 29s 6d, 29s 10½d, 30s, 30s 9d, and 30s 3d, all per 480 lbs. On passage, Ibraila at 30s 6d. Barley, arrived, Danubian and Ibraila at 25s 9d to about 26s 9d per 400 lbs. Rye, arrived, Odessa at 31s 9d and 31s; Taganrog, 31s; Galatz at 31s 3d and 31s 6d per 480 lbs.

The following report shows the state of the Albany lumber market during the week ending July 11:—The receipts of lumber have been large and the stock is accumulating, although the shipments have been large to both Southern and Eastern ports. The sales during the 4th of July week, as usual, were limited; but there has been a fair attendance of buyers thus far this week. An artificial freshet, created by letting the water out of Indian Lake, with the late rains, has brought down about fifteen million feet of logs to Glen's Falls, principally hemlock. It was hoped that a larger quantity would have run through, but now there is no probability of a further supply till next fall, if then; consequently there is a firm feeling in the market for spruce and hemlock. The pine in market is mostly green, though there are some lots of seasoned lumber. There is a good assortment of lumber in market, and a full stock of all kinds. There is also a good supply of vessels for all ports. The receipts by the Erie and Champlain canals, from the opening of navigation to July 8, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1857	67519702	26718	10575	42240620
1858	105591515	11632	56143	41971700
1859	94929100	24079	56559	55581857
1860	109818600	18019	26877	23595147

The latest advices to hand from Canada report a very marked improvement in almost every branch of trade, as evidenced in the increase of nearly one-third in the imports when compared with the corresponding period of last year.

Public Deposits	3,960,021	Coin and Bullion	15,914,834
Private Deposits	14,828,614		
	41,618,966		45,013,582

The balance of Assets above Liabilities being 3,394,616*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£106,435
An INCREASE of Public Deposits of	474,514
A DECREASE of Other Deposits of	436,698
An INCREASE of Government Securities of	56,871
A DECREASE of Other Securities of	13,844
A DECREASE of Bullion of	95,009
An INCREASE of Rest of	11,766
A DECREASE of Reserve of	35,019

The present Bank returns, from the slight fluctuations which have taken place, present no feature for comment. The public deposits have increased rather more than the other deposits have decreased.

We observe that the bullion still continues to decrease, although only to the extent of 93,000*l*.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 22,126,039	£ 20,324,514	£ 21,214,129	£ 22,659,235	£ 22,830,331
Public deposits	5,022,745	4,219,872	3,640,443	5,018,456	3,960,021
Other deposits	10,404,440	10,189,989	15,053,461	14,907,777	14,828,614
Government securities	14,285,582	10,596,581	10,587,476	11,170,680	9,771,445
Other securities	10,166,075	16,051,555	15,440,082	17,350,596	19,405,303
Reserve of notes & coin	10,080,946	6,570,563	11,328,551	10,096,555	8,271,659
Coin and bullion	16,841,721	11,672,078	17,262,806	17,462,600	15,914,834
Bank rate of discount	2½ p. c.	6½ p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	96⅛	90½	96	95	95⅛
Average price of wheat	43s 6d	62s 7d	46s 4d	44s 11d	56s 6d
Exchange on Paris (short)	25 32½ 37½	25 20	25 5 12½	25 5 10	25 10 17½
— Amsterdam ditto	12 1 1½	11 16½ 17	11 15 16	11 12 12½	11 14½ 15
— Hamburg (3 months)	13 10½ 11	13 6½ 8½	13 7	13 4½ 4½	13 5½ 6

At the corresponding date of the year 1850, money was very abundant, the rate on Exchequer Bills and Government securities was 1¼ to 1½ per cent., and in the discount market 2 and 2¼ per cent., and Consols 96⅞.

In 1857, the crisis in India still absorbed attention, and the public mind was excited by a premature rumour that Delhi had fallen. The funds were falling. The drain of silver to India had assumed serious proportions.

In 1858, considerable animation was observable in the stock markets in anticipation of a pacific speech from the Emperor of the French at Cherbourg. A favourable influence was also exercised by the news of a great defeat of the rebels near Lucknow, and a favourable statement by Lord Stanley in respect to the prospects of Indian finance.

In 1859, the Bank rate of discount was 2½ per cent., yet the funds were 1 per cent. lower than in 1858, when the rate was 3 per cent., and ½ per cent. lower than in 1856, when the rate was 4½ per cent. But it should be observed that a drain of gold existed at the Bank, and that rumours of political strife were beginning to create uneasiness.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 238,365*l*; in 1857, a deficiency of 5,861,566*l*; in 1858, a deficiency of 386,621*l*; and in 1859, a deficiency of 2,442,619*l*. In 1860, the deficiency is 4,576,689*l*.

MONEY AND DISCOUNT MARKET.—Money in the discount market is decidedly easier this week, and the demand at the Bank has greatly diminished. The rate remains at 3⅞ to 4 per cent. In exceptional cases, bills at short dates have been discounted at 3¾. Generally speaking, we should say there was a falling off in the demand for discount. The Greek houses have been rather active borrowers to-day, and it is remarked that the demand, although not so active as it has been, is yet greater than is usual at this period of the year. The best opinions that can be obtained seem to think that should the weather continue fine, an easier market for discount may be expected.

Money in the Stock Exchange is a drug, the rate being from 1½ to 2 per cent., and difficulty is experienced in lending large sums at even 1½ per cent.

The discount houses are very full of money. The rate allowed in Lombard street is 3 per cent. at call, and 3½ per cent. for longer periods.

The following are the rates of discount at

	Bank rate. Per cent.	Open market. Per cent.
Amsterdam	4	4
Berlin	4	4
Frankfort	2	1½
Hamburg	No Bank rate	1½
London	4	3⅞ to 4
Paris	3½	3 to 3½
St Petersburg	5	5 to 6
Vienna	5	4½

ENGLISH FUNDS.—The fluctuations in the English funds during the week have not exceeded ¼ per cent.; the extreme prices in Consols having been 93⅛ and 93⅜. Stock is becoming decidedly scarcer from the absorption by the public, the price of Consols being the same for money as for the account. The demand for stock on the part of the public is still further proved by the approximation in price between Reduced and New 3 per Cents. and Consols, which is now only ⅛ per cent. in favour of the former for investment, whereas when we first drew attention to the subject the difference was from 1 to ⅞ per cent. The closing price of Consols is 93¼ ⅜ for money and account; New 3 per Cents., 93⅝ ¾; and Reduced, 93⅝ ¾. Exchequer Bills are 1s to 4s prem.

With regard to the proposed loan for fortifications, it is intended to raise 2,000,000*l* this year; and, supposing this is done by way of an annuity for thirty years, the value of that annuity, based on the present price of Consols, and calculated to pay 3¼ per cent. and allowing for income tax, would be 17*l* 18s 6d for every 1*l* annuity.

An impression prevails that the Bank of England will compete for this annuity; although many are of opinion that annuities are too much of a lock-up for a banking asset.

The Government broker has been a daily buyer of stock to the extent of 20,000*l*.

About 20,000*l* in gold has been taken from the Bank to-day.

FOREIGN FUNDS.—The transactions in the foreign funds during the week have been very limited; but Turkish, Mexican, and Spanish Bonds are rather lower.

England, France, and Spain are using their good offices to bring about a reconciliation between the contending parties in Mexico.

It is stated that Sardinia and France will both require loans, but that they will be raised at home. There certainly is very little disposition to purchase foreign securities in England.

The closing prices of French funds to-day are 68f 20c.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

RAILWAYS.—The public continue to invest in railway shares, in anticipation of increased dividends, and there is a scarcity of stock in the market.

The shares that have been most favourably affected are Lancashire and Yorkshire, Midland, Great Western, Manchester, Sheffield, and Lincolnshire.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day:—

RAILWAYS.

BULLION.—We subjoin Messrs Pixley, Abell, and Langley's circular, which accurately describes the movements of the bullion market, and also of the Indian Government loan notes, &c.:—

Gold.—The only arrivals we have to report since the date of our last circular (19th inst.) have been the Europa, with 35,000*l*, from Boston; the Kangaroo, with 41,000*l*, and the Adriatic, with 50,000*l*, from New York; and these amounts have been taken for the Continent. We are now looking for the arrival of one or two vessels from Melbourne. The Delta has taken 7,000*l* in gold to Alexandria.

Silver.—Our market has been very quiet during the week. We have not any arrivals to report, and the Delta takes out only 15,000*l* to Bombay. We quote the price as 61½d per oz standard nominal.

Mexican Dollars.—We have not any arrivals to report, and the price is quite nominal. The next West India steamer is expected to bring a considerable amount, and a fall in the rate may then be looked for.

Exchange on Bombay and Calcutta for Bank drafts at 60 days' sight continues at 1s 11⅜d to 2s ¼d for both places. Madras 1s 11⅞, nominal. Bills with documents on Bombay and Calcutta, 1s 11d to 1s 11¼d.

Indian Government Loan Notes have been dull the last few days, and the amount of business in these securities has been limited. We quote prices 102¼ to ¾ for 5½ per Cents., and 97 to 97½ for 5 per Cents.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 74s per oz, last price; United States gold coin, 76s 3d per oz, last price. Silver—Bar silver, 5s 1½d per oz std, last price; bar silver, containing 5 grs of gold, 5s 1⅝d per oz std, last price; fine cake silver, 5s 6½d per oz; Mexican dollars, 5s 2⅝d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11½d per oz, last price.

The Edinburgh, from New York, brings 110,000 dollars in specie.

JOINT STOCK BANKS.—The meeting of the Bank of Egypt will be held on Friday, the 3d day of August next. The net profits, after making provision for bad and doubtful debts, amount to 11,148*l* 9s 10d, from which the Directors recommend that a dividend be declared, at the rate of 7 per cent. annum, free of income tax. After payment of which (8,750*l*), there will remain 2,398*l* 9s 10d to be carried forward to the next account. The balance sheet shows:—

LIABILITIES.	£	s	d
Capital paid up	250,000	0	0
Reserve fund	13,164	3	5
Bills payable, current and other accounts	341,031	9	0
Profit and loss	11,148	9	10
	615,344	2	3
ASSETS, &c.			
Cash	30,373	10	9
Bills receivable, advances, and other securities	582,168	10	10
Office furniture	802	0	8
Total assets	613.344	2	3
Preliminary expenses	2,000	0	0
	615,344	2	3

At a meeting of the English, Scottish, and Australian Chartered Bank, Mr S. P. Kennard in the chair, the report was adopted unanimously, and a dividend declared for the past half-year at the rate of 5 per cent. per annum, free of income tax. The Directors recommend that the balance of 14,654*l* be appropriated as follows:—To the payment of a dividend at the rate of 5 per cent. per annum, free of income tax, on 500,000*l*, the paid-up capital of the Bank, 12,500*l*; towards the reduction of the amounts at debit of preliminary expenses, 500*l*; Bank premises and furniture accounts, 1,000*l*; leaving 654*l* to be added to the reserved fund, which will then amount to 12,585*l*.

The Directors of the Northamptonshire Union Bank held their half-yearly meeting on Thursday, the 26th inst. The auditor's report, which was laid before them, showed that, after making ample allowance for bad and doubtful debts, the profits for the half-year ending the 30th of June last amounted to 13,206*l* 13s 7d, and which was disposed of as follows:—

	£	s	d
Dividend of 8s per share	10,600	0	0
Income tax	552	10	0
Surplus to next half-year	2,054	3	7
	13,206	13	7

The guarantee fund remained as at the last report, viz., 50,000*l* Consols and the Bank premises.

At the half-yearly meeting of the Bank of London, Sir J. V. Shelley, M.P., in the chair, the report was adopted unanimously, and a dividend declared at the rate of 5 per cent. per annum, free of income tax. It was stated that the connection of the Bank is extending, and that its resources are increasing rapidly. The profit in the past six months was considerably larger than on any previous occasion. In the year ending the 30th of June the earnings, including the appropriation to the reserve, have been equal to 10 per cent., besides the sums written off, preliminary expenses, &c. Since making up the accounts the late failures in the leather trade have been announced. Messrs Streatfeild kept a current account at the Bank, and the Bank will, in common with older and more experienced establishments, suffer from their suspension. 4,000*l* has been appropriated in the present half-year to meet this loss, and a further amount of 5,000*l* or 6,000*l* will probably be required. No other bad debts have been experienced. With regard to the threatened appeal from the decision in favour of the Bank of the Master of the Rolls, alluded to in the report, the Directors believe that it cannot possibly hold good. A comparison of the business of the Bank during the past three years shows that on the 30th of June, 1858, the assets and liabilities were 1,388,000*l*; on the 30th of June, 1859, 1,685,000*l*; while on the present occasion they are 1,949,915*l*. With regard to the reserve, the Directors, having in view the policy of making the Bank a permanent and solid institution, propose to add to it until it shall reach 50,000*l* before in-

creasing the dividend. This announcement was favourably received.

The National Bank have declared a dividend for the last half-year at the rate of 8*l* per cent. per annum, with a bonus of 15s per share, being together at the rate of 14 per cent. per annum upon the paid-up capital.

At the half-yearly meeting of the Bank of Manchester, a dividend was declared at the rate of 10 per cent. per annum, with a bonus of 1 per cent., for the six months. This Bank was among the first to adopt limited liability, and to rely for its reputation on the character of its business, and the result appears to have been very satisfactory. The business has increased, together with the character and extent of the proprietary, and the Directors have voluntarily called in a professional auditor, whose statement is appended to their report.

FAILURES.—We last week intimated that the estates of the firms in the leather trade which have lately stopped were likely to realise but poor dividends. We regret to observe the subjoined statements fully confirm the intimation we gave; in fact, the trade seems mostly to have been carried on of late years by means of accommodation paper. It appears to us that if a better system of co-operation and intercommunication had existed between the Bank of England, the banks (both private and joint stock), and the discount houses, it would have been impossible that such a system as that adopted by the house of Streatfeild, Mortimore, and Co. could have been carried on. As that house is about to pay the penalty and the opprobrium attached to their mode of carrying on business through the ordeal of the Bankruptcy Court, we must await the judgment that will be pronounced when their transactions are thoroughly laid bare. In the meantime, a hope is expressed that due caution may be exercised in the disposal of the stocks in trade of the fallen houses, so that the losses already so large may not be aggravated by a too precipitate sale of them on the market. At a numerous meeting of the creditors of Messrs Streatfeild, Lawrence and Mortimore, (Mr D. W. Chapman, of the firm of Overend, Gurney, and Co., in the chair,) a strong disposition was manifested to send the estate into the Bankruptcy Court, and, although a majority were opposed to this course, it was pressed by the largest creditors as necessary for an example against such a system of accommodation bills. That has since been done. The statement of accounts prepared by Messrs Coleman, Turquands, and Young gives the liabilities as 744,448*l*, and the assets at 214,840*l* 14s, or about 5s 9d in the pound, subject, of course, to the vicissitudes of the winding-up. On the debtor side of the account appear creditors on deposit account for 68,821*l*, and on open account, 67,148*l*, less 9,018*l*, that may be claimed by consignors of goods. The creditors on bills payable represent 151,678*l*, less the amount expected to be retired by drawers for whose account they have accepted, 79,083*l*. The creditors partly secured represent 40,694*l*; less value of bills held and cash balances, 20,332*l*. The creditors fully secured represent 129,439*l*, and as the securities held by them are estimated at 152,611*l*, there is a balance on this account of 23,172*l* to be carried to the other side as an asset. The liabilities of the house on bills in circulation are 767,730*l*, of which 110,503*l* is expected to be paid in full. Amount held by creditors partly and fully secured, 138,528*l*, and balances in bankers' hands, 4,159*l*, which reduces the total to 514,540*l*; and there are notes of hand out for 10,000*l*. On the credit side of account, in the shape of assets, it appears that the bills receivable on hand 2nd July amounted to 61,158*l*; less certain reductions which reduce the total to be realised to 7,776*l* 12s. The debtors good are 36,799*l*; doubtful, 217,670*l*, which is estimated to produce 66,599*l*, leaving a loss of 151,170*l*. The bad debts are put down at 34,683*l*; sundry assets appear at 20,376*l*; surplus securities, 10,899*l*; and surplus of the separate estate of Mr Lawrence and Mr Mortimore, 72,273*l*. It would appear that on the 1st of January, 1857, Messrs Streatfeild were believed to be solvent, the 365,000*l* due from the houses connected with the firm, now considered bad, being at that time thought a good debt. Since then the amount has been gradually increasing, until the 365,000*l* has swollen to nearly 800,000*l*. The partners hoped to retrieve their position from two sources—first, from the estate of the late Mr Vere Smith, of Abergavenny, from which, through Messrs Herbert Smith, Smith, Patient, and Smith, and Mrs Laurence, the wife of Mr Laurence, the sum of 72,000*l* was expected to come into the firm. This estate, however, has not yet been realised. The other source was from the profits of the business; during the last three years these were 133,000*l* in the gross (108,000*l* by commission and 25,000*l* by difference of interest), and 108,500*l* net, the whole of which has been appropriated to meet bad debts. It has been stated that the firm were in the habit of charging 2 per cent. commission on the renewal of their debtors' bills, or 8 per cent. per annum; but this was not the case, that charge being made only in cases where Messrs Streatfeild had paid cash for goods purchased for the accommodation of debtors. These transactions have, besides, been of very small amount. In carrying on such an extensive business it was necessary to support the other houses, as, if one failed, the others would necessarily stop. After the suspension of Draper and Co., of Kenilworth, there was a general contraction of discount accommodation, and stoppage became unavoidable.

A meeting of the creditors of Messrs Hooper and Parkinson, leather factors, who stopped on the 28th of June, has taken place, when a balance sheet was presented by Messrs Paul and Turner, accountants, showing liabilities expected to be proved against the estate 43,715*l*, and net assets 10,758*l*. After some discussion, it was resolved by a majority to wind up under a deed of inspection. A composition of 5s in the pound had been proposed, but, although more than the estate shows, the offer was declined.

At a meeting of the creditors of Messrs W. and C. Mundy, it was agreed to wind up the estate under inspection. The accounts, prepared by Messrs Coleman, Turquand, and Youngs, shows liabilities of 59,948*l* 12s 8d, and assets of 32,988*l* 19s 8d.

At a meeting of the creditors of Mr Randall, trading under the firm of Parker and Co., inspectors were appointed. The books were three years in arrear. An approximate statement shows liabilities 46,616*l* 16s 4d; total assets 19,733*l* 11s 3d.

At a meeting of the creditors of Mr W. J. Armstrong, in the leather trade. The estate shows 11s 6d in the pound. A proposition to pay 10s at four, six, nine, and twelve months, the first two instalments to be of 3s, and the others of 2s each, was accepted by the creditors present, conditionally on the rest agreeing to such a course by the 23d of August.

At a meeting of the creditors of Mr W. Dickins, of Northampton, in the leather trade, Mr Burton, the solicitor, said that the only offer that could be made was 3s in the pound, by instalments, extending over twelve months; but he would put himself entirely in the hands of the creditors. Looking at the smallness of this estate, however, the creditors present thought it would be better to wind up at once, and it was therefore resolved that a deed of assignment should be executed, and Mr Maunder and Mr Oastler be the inspectors for the general benefit of the creditors. The liabilities amount to 20,909*l* 12s 11d; the total assets to 3,359*l* 16s.

An adjourned meeting of the creditors of Messrs. Helling and Yeoman, contractors for the southern main high level sewer, has been held, when a statement of their affairs was submitted by Mr C. F. Kemp, the accountant, showing liabilities 15,132*l* 17s 6d; and assets (consisting chiefly of plant) 13,353*l* 17s 6d, in addition to whatever sum may be recovered from the Board of Works of the balance of moneys now retained by them, and estimated at 6,000*l*. It was mentioned that Messrs Lee and Bowles, the sureties to the Board for the completion of the contract, were going on with the works, had purchased the plant for that purpose, and, after discussion, an offer of composition of 15s in the pound, at equal instalments of four, eight, and twelve months, secured by these gentlemen, was accepted.

The oldest trading leather merchant of Glasgow, Mr James Muirhead, has suspended payment, after a career of 35 years. He is a most respectable merchant, and has been brought down by two extensive leather failures on the Clyde. He hopes to be able to pay 20s in the pound, and that his suspension will be but temporary.

At a meeting of the creditors of Messrs D. and J. Mackintosh tanners—Mr. E. B. Brown in the chair—it was resolved to wind the estate up under inspection, a committee of three gentlemen having been appointed.

At a meeting of the Unity Bank, it would appear that after paying all expenses there is an available net profit of 2,626*l* 6s 2d, which is sufficient to pay interest for the past half-year at the rate of 2½ per cent. on the share capital, and leave a surplus of 407*l* 1s 2d. The Directors, however, do not recommend this distribution to be made, but to be carried forward, which was unanimously agreed to.

MISCELLANEOUS.—At a meeting of the National Discount Company, the gross profit for the half-year ending the 30th June last amounts to 37,247*l* 18s 10d, and after payment of the current expenditure, writing off the usual portion of the preliminary expenses, and reserving 17,366*l* 15s 8d for rebate of interest on bills not yet due, there remains a balance of 14,647*l* 18s 8d. "The Directors regret, however, to add, that since the closing of these accounts serious failures have arisen in connection with the leather trade, but as at this early date it is impossible to estimate with accuracy the probable loss the Company may sustain thereby, they propose that after payment of the dividend at the rate of 5 per cent. per annum, the surplus be carried forward, to be dealt with in the next half-year's account." The "reserve fund," with the interest which has accrued thereon, now amounts to 25,988*l* 11s 1d. The dividend, free of income tax, will be paid on the 3rd proximo. In reply to inquiries on the subject, the Chairman mentioned that the amount of bills they held of parties who lately failed in the leather trade was 46,832*l*, with 17 names. No estimate of probable loss could be safely given, but he would mention, without pledging himself to accuracy, that the amount might prove from 20,000*l* to 23,000*l*.

It is stated that the direction of the Galway Packet Company is to be reconstructed, and that with this view a resolution was adopted at the Board recommending the resignation of the whole of the Directors. Some of them are to be re-elected, and the Board is to be completed by the introduction of persons nominated with the concurrence of a combination of moneyed interests, who have come forward to support the Company. Mr Lever has retired.

The East India Company have presented to Parliament a strong petition against the Bill recently introduced by Sir Charles Wood "to provide for the transfer and management of East India Stock at and by the Bank of England." The measure is of much more scope than its name would imply, since it would have the effect of interfering with the form of security now held by the proprietors of East India Stock, and the mercantile community seem disposed to consider that both the legal and equitable objections to it are in a considerable degree well founded. At the same time the only practical advantage it could confer—namely, the management of the stock business by the Bank, is understood to be in course of attainment by an arrangement between the Bank and the Company. Under these circumstances it is presumed the measure will not be pressed, or, that at all events, it will be allowed to stand over till next year, when it may receive due consideration.

The United Kingdom Electric Telegraph Company is announced, with a capital of 150,000*l*, upon Mr Allan's system, which combines simplicity and economy in the construction and working. The object of the undertaking is described to be "to establish a system of electrical communication, based on the principle of the penny-postage, to convey messages throughout the United Kingdom at a low and uniform rate—a shilling for a short message, or some equivalent charge—irrespective of distance." The probable profit is based upon the transmission of 50 messages a day at 1s each, between twelve of the largest towns in the country, the proceeds of which are placed at 120,450*l* by geometrical progression. One of the great features of the undertaking is the adoption of the principle of the penny-postage, or a low and uniform rate, irrespective of distance.

The report of the Directors of the Electric and International Telegraph Company recommends a dividend of 3½ per cent. for the half-year, against 3¼ in the corresponding period of 1859. A balance of 5,618*l* out of the half-year's earnings is carried to the renewal fund, which is thereby increased to 29,035*l*. This fund is to be applied to the purchase and submersion of another cable to the Hague. The report alludes to the proposal to connect America with this country via Denmark, Iceland, and Greenland, and observes that "a very short continuance northward of the existing wires would bring the whole of the Company's stations into direct communication with this Transatlantic route."

The half-yearly meeting of the Midland Railway Company is called for the 14th August, at Derby, and will be made special, to authorise the Directors to convert loans or debentures into Midland mortgage preference stock, as well as to consider the expediency of issuing new shares under the provisions of the several Acts, one of which is entitled "The Midland Railway London Station Act, 1860."

At the half-yearly meeting of the Scottish Australian Investment Company, Mr W. H. Dickson in the chair, a dividend at the rate of 10 per cent. was agreed to. The aggregate gross profit for six months was 10,355*l* 11s 7d, and the reserve fund now amounts to 13,290*l* 2s 5d.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille premium, and the short exchange on London is 25.12½ per 1l sterling. On comparing these rates with the English Mint price of 3l 17s 10½d per ounce for standard gold, it appears that gold is rather more than 2-10ths per cent. dearer in Paris than in London.

The course of exchange at New York on London for bills at 60 days' sight is 109¾ to 110 per cent., which, when compared with the Mint par between the two countries, shows that the exchange is in in favour of England; and, after making allowance for charges of transport and difference of interest, the present rate leaves a small profit on the importation of gold from the United States.

The Commercial Times.

Later Departure of Canadian Mail Packets.—The Canadian Mail Packets, which have heretofore sailed from Liverpool every Wednesday, calling to embark mails at Londonderry, will in future leave Liverpool on Thursday. Supplementary mails for Canada and the United States will be made up every Thursday evening, containing letters, &c., posted or arriving in London up to the usual post hour on that day, and will be forwarded to Londonderry to be put on board the Canadian Mail Packet, together with all other correspondence reaching Londonderry on Friday.

Mails for Sicily by Steam Packet from Genoa and Leghorn.—Information has been received from the Director-General of the Sardinian Post Office of the establishment of steam packets to run twice a week from Genoa and Leghorn to Palermo. These packets will leave Genoa every Monday at eleven p.m., and Leghorn every Saturday at noon. Letters, &c., intended for conveyance by these packets must be specially addressed "via Sardinia."

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Owing to an enormous influx of foreign grain during the present week, there was very little inquiry for either English or foreign wheat at Mark lane to-day, and to have forced sales, lower rates must have been submitted to. For all kinds of spring corn, the demand was somewhat heavy, and oats declined 6d to 1s per quarter. In the value of flour, no change took place. The im-

ports amount to 54,410 quarters of wheat; 35,050 barley; 138,480 oats; 2,700 sacks and 9,850 barrels of flour.

Messrs Briggs and Co., of Alexandria, whose letter is dated the 11th inst., observe:—

Our last advices were dated 3rd instant. Since then prices in our grain market have been steady, with however but little alteration, excepting in beans, the value of which has advanced, owing to the scarcity of arrivals. Supplies of barley have been comparatively large, but prices vary considerably, according to quality. Indian corn is exceedingly scarce, and the sales since our last are limited to two small lots, in all about 55 ardebs. The following are the sales since our last, with present prices, free on board:—Wheat, Saide, 6,625 qrs, 36s to 37s 3d; ditto, Behera, 3,840 qrs, 34s to 35s; ditto, ditto, white, 262 qrs, 35s 9d to 36s; beans, Saide, 1,550 qrs, 27s 3d to 27s 8d; ditto, Behera, 4,200 qrs, 25s 6d to 26s; barley, 4,600 qrs, 18s to 20s 1d; lentils, 30 qrs, 27s to 27s 6d; chick peas, 212 qrs, 33s 6d to 34s 6d per quarter. Freights—Shipping continues scarce and freights are firm, though with little business doing. The rates for beans to the United Kingdom for orders may be quoted 6s to 6s 3d per quarter; beans or wheat to a direct port, 5s to 5s 6d; by steamer to Liverpool, 5s 6d per quarter. Exchange on London at 3 months' date, 95¾ piastres per £. Marseilles 5.23f to 5.24f per dollar of T. P. 20.

There has been a less active demand in the Liverpool cotton market during the week, the sales amounting to 48,000 bales only, and include 35,500 bales to spinners, 1,500 on speculation, and 11,000 bales for export: quotations are fully ⅛d per lb lower than on Friday last. Sales to-day, 8,000 bales; market closing very quiet. The accounts from America this week give promise of another very large crop for next season. This fact, combined with the large stock in Liverpool, intimidates holders, who, for the most part, have become willing sellers; but buyers hold aloof shily, expecting to gain an advantage by-and-by by waiting.

The arrival of a bale of new cotton at New Orleans, on the 3rd inst., goes to corroborate what has been said of the forwardness of the crop. This is twelve days in advance of the earliest previous year (1856), and more than three weeks in advance of last year. As usual, this "first bale" comes from Texas, and by some it is regarded as indicating the result of the severe drought complained of there, which has been to force the cotton to rapid maturity at the expense of the quantity grown.

"The position of the cotton market," observe Messrs Briggs and Co., of Alexandria, writing on the 11th inst., "continues without change. Sales since our last amount to 290 bales, at 6.12d to 8d per lb f.o.b. Freights may be quoted nominally at ⅛d by sailing vessel or steamer. Exchange on London, 95¾ piastres per £ sterling. Export of cotton in bales from June 17 to July 2, 1860:—Great Britain, 1,000; France, 600; Austrin, 481; total 2,081."

We have no change to notice in the value of any kind of tea. The demand has been wholly confined to parcels for immediate consumption.

Good and fine raw sugars have changed hands to a fair extent at full quotations; but other descriptions have commanded less attention, at barely previous currencies. Refined goods have sold slowly.

The coffee trade has been far from active; nevertheless the market may be considered steady. Cocoa has ruled about stationary.

Considerable business has been transacted in rice, at full prices. Fruit and saltpetre have met a slow sale.

The result of the indigo sales is thus reported by Messrs Layton, Hulbert, and Co.:—

The quarterly sales of indigo, consisting of 15,207 chests, commenced on the 10th instant, and terminated on Monday. During the progress of the sale, 6,309 chests were withdrawn, leaving 5,688 chests Bengal, Benares, &c.; 500 chests Oude; 1,710 chests Kurpah; 1,000 chests Madras—total, 8,898 chests. The quantity brought forward (15,207 chests) exceeded by one-half the probable requirements of the trade; and much of the indigo arriving late, many of the marks towards the end of the catalogue were imperfectly seen, and some of them were not seen at all. In the early portion of the sales the rates of May to 2d decline were obtained for good and fine Bengal; medium qualities showed a fall of 4d, and the cold pale kinds of 6d per lb, nearly 700 chests selling daily; but after the first week it became evident that the orders were not sufficiently numerous to sustain the pressure put upon the market, and prices gradually gave way as the sale drew to a close, the ordinary qualities suffering the greatest depreciation. The attendance of continental and home buyers was less numerous than ever in a July sale. The quantity sold, including several of the withdrawn parcels, is 7,000 chests, of which about 5,500 are for export, and 1,500 for home use and re-sale. 2,400 chests remain bought in. Prices may be quoted as under:—Bengal—Fine blue, 8s 3d to 8s 6d; ditto purple and violet, 7s 10d to 8s 2d; good purple and violet, 7s 4d to 7s 9d; middling and defective, 6s 10d to 7s 3d; consuming, fine, 6s 6d to 6s 11d; ditto, good, 5s 10d to 6s 4d; ditto, middling, 5s 2d to 5s 9d; ditto, ordinary, 4s 2d to 5s 2d; ditto, ordinary and lean, 2s 6d to 4s: Oude—Good, 4s 3d to 5s; middling, 3s 3d to 4s 2d: Madras—Velore, 4s to 5s; middling, 2s 9d to 3s 9d; ordinary, 1s 6d to 2s 8d: Kurpah—Fine, 6s 6d to 7s 4d; good, 5s 9d to 6s 4d; middling, 4s to 5s 3d; ordinary, 1s 7d to 3s 9d per lb.

The quarterly sales of Spanish indigo have gone off at a decline of from 2d to 3d per lb, compared with the previous series.

The colonial wool sales have been well attended by buyers this week, and the whole of the parcels offered have changed hands, at fully the opening quotations. The Birmingham wool sales have gone off heavily, at a decline of ½d to ¾d per lb. The prices realised were:—Fleece Wools—Mixed clips, 18½d to 21⅝d; wethers, 20¼d; tegs, 19½d to 22d; cots, 16⅝d; black and grey, 15⅞d; locks, 12½d. Skin wools, 19d; super lamb, 18½d.

The spirit market has been wholly devoid of animation, at about previous rates.

Scotch pig iron has sold at 51s 6d up to 52s 6d cash, mixed numbers. The shipments have fluctuated very much during the last few weeks, as will be seen from the subjoined table:—

		1860. tons		1859. tons
Week ending	May 19	13,600	.....	13,755
—	May 26	11,600	.....	11,451
—	June 2	12,213	.....	8,688
—	June 9	10,417	.....	9,069
—	June 16	8,926	.....	10,237
—	June 23	10,180	.....	9,796
—	June 30	11,187	.....	10,033
—	July 7	11,603	.....	10,375
—	July 14	7,133	.....	14,772

It thus appears that the shipments in the last nine weeks have only amounted to 96,859 tons, as compared with 98,176 tons in the corresponding period of 1859.

No change of importance has taken place in the value of oils. Tallow has ruled steady, and the price on the spot is 52s 9d. Town tallow, 52s 6d net cash.

"The amount of capital seeking employment," says the New York *Shipping List* of the 14th inst., "would seem to be on the increase, and rates of interest are accordingly easier. Paper in some cases was done yesterday at 5½ per cent., which was hard to pass a week since at 6. The activity in the stock market occasions rather more demand for temporary loans, but that is freely met at the ordinary quotations. The general characteristics of the market may be said to be ease and confidence on the part of the mercantile and business community, with a commendable measure of caution on the part of the banks in view of the possibilities of livelier times towards autumn. However, there is no prospect for some time of any material change from the present position of things; and in that conclusion, we find there is a general settling down. We quote:—

	Per cent. per annum.
Loans on call, stock securities	5 to 5½
Do. other good securities	5½ 6
Prime endorsed bills, 60 to 90 days	5 ...
Do. 4 to 6 months	5 6
First class single signatures	5½ 6
Other good bills	7 7½
Names less known	8 9

The following shows the dry goods movement for the week, and from 1st of January to date, compared with previous season's:—

FOR THE WEEK.

	1859. dols		1860. dols
Entered at the port	3,989,103	.....	4,400,746
Thrown on market	3,978,025	.....	4,471,630

SINCE JANUARY 1.

	1859. dols		1860. dols
Entered at the port	62,581,236	.....	56,922,676
Thrown on market	62,236,949	.....	56,685,001

In the way of general trade, we continue to note on all hands a fair business for the season, considering that that season, by common consent, is the dullest of the year. The produce markets are active, occasioned, in part, by a foreign demand. Other descriptions of merchandise are quiet, for the most part, but firmly maintain their values, especially coffee, sugar, and other groceries."

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR RECENT OR THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—A more quiet tone has pervaded the market, but, with moderate supplies offering, prices showed little alteration up to yesterday (Thursday). There is still an inquiry for low brown Mauritius by importers, and strong refining sorts remain steady. Transactions in West India during the three days amounted to 2134 casks, including 356 casks Barbadoes by auction: brown, 36s 6d to 37s 6d; low to fine yellow, 37s to 44s per cwt. At the Netherland Trading Company's sale of Java held yesterday, prices showed little change for the better sorts, brown and yellow

being rather dearer than in May. The stock remains almost stationary, and the deliveries last week fully maintained the late improvement, being 6,200 tons, including 5,910 tons for home consumption. The export clearances are below those of the previous season.

Mauritius.—4,426 bags partly sold at steady prices: low to good brown, 32s 6d to 37s 6d; black, 31s to 32s; grainy sorts, grey to fine yellow, 40s to 45s 6d per cwt. An inquiry prevails for brown descriptions by private contract.

Madras.—860 bags native chiefly sold as follows: brown, 31s 6d to 33s; the remainder taken in above the value.

Foreign.—By private contract very few transactions have occurred. Yesterday, 2,000 bags clayed Manilla sold at 37s, and 1,000 boxes white Havana afloat for the Baltic at 35s. By auction, 83 casks Cuba partly sold at 38s 6d to 41s for low soft grey to middling greyish yellow. 645 boxes sold steadily at 41s to 47s for clayed. The sound portion of 2,060 boxes Havana was principally taken in: brown and yellow, 38s 6d to 43s 6d; grainy white, 52s 6d to 55s; one lot white (16s duty) sold at 47s 6d per cwt.

Refined.—In some cases rather lower prices have been accepted for dry goods, which are now worth 51s 6d to 53s, common to superior quality. Crushed and pieces are without material change.

Molasses.—Few transactions have taken place. A parcel of old Cuba has sold at 16s per cwt.

Rum.—Several contracts have been made at the recent decline, including Penang, at 1s 4½d to 1s 5d; Mauritius and Bengal, 1s 5d; superior Demerara, 1s 10d; Berbice, 1s 8d per proof gallon.

Cocoa.—100 bags Trinidad in public sale found buyers at 65s to 72s for grey to fair red, being rather lower.

Coffee.—There has been a steady demand in the public sales, and generally at former prices, the various parcels brought forward finding buyers. 480 casks 320 barrels and bags plantation Ceylon went as follows: fine ordinary to middling, 68s to 73s; good middling, 73s 6d to 75s 6d. 364 bags native: fair to very good, 61s 6d to 63s; triage, 43s to 48s 6d. 5,109 bags Costa Rica brought 63s to 76s for good ordinary to good coloury, being relatively moderate rates. 287 cases Cochin: pale to middling, 70s to 75s 6d; very good to fine, 85s to 95s 6d. 458 quarter-bales Mocha, of indirect import, were bought in: mixed small berry, 110s to 115s per cwt.

Tea.—Since last Friday the market has been inactive, but the trade have latterly shown a little more desire to purchase some descriptions. Several parcels are still, however, rather pressing for sale. Common congou nominally 1s 4d per lb.

Rice.—Owing to the unsettled weather some kinds have been rather more inquired after, and holders now seem unwilling to sell at the decline recently established. Of 7,227 bags Bengal by auction, a considerable portion sold at 13s 6d to 14s 7½d for good to fine white. 1,048 bags low pinky Madras were bought in at 10s 6d. Privately, good pinky Madras has sold at 10s 9d, and white Bengal, 10s 9d to 14s: low Moulmein, 8s 10½d: Necrancie Arracan, 9s to 9s 3d. A floating cargo of Arracan has sold: Necrancie, 10s 3d; Laroog, 9s 9d per cwt.

Imports and Deliveries of Rice to July 21, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons

Exported	8350	12800	11900	30500
Stock	45960	70260	99250	41700

Spices.—Black pepper continues firm at 4 1-16d to 4½d for Singapore, and Penang has sold freely at about 3¾d. Pimento is less inquired after, but holders remain firm. 131 bags by auction were taken in at 3½d to 3¾d per lb. 20 cases very good to fine Cochin ginger realised 99s to 121s. 100 boxes cassia lignea from Bombay: common quality, pile 2 and 1, 84s to 86s per cwt, being rather cheaper.

Saltpetre.—The market is firm, although not so active as of late. Privately, few sales have been made in Bengal: refraction 10½ to 4½ sold at 40s to 44s; and 1,150 bags Bombay, refraction 40 to 50, 34s 6d to 35s 6d per cwt.

Imports and Deliveries of Saltpetre to July 21, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	8065	11510	6210	9700
Delivered	7160	12220	8300	6560
Stock	4750	4240	4600	5170

Deliveries last week 380 tons.

Cochineal.—This article remains steady. 252 bags went at about previous rates: Honduras silver, 3s 1d to 3s 9d; low to middling black, 3s 6d to 4s 4d; Teneriffe silver, 3s 1d to 3s 4d; black, 3s 5d to 3s 9d. Yesterday, 296 bags were chiefly bought in at higher rates.

Dyewoods.—150 tons red wood were bought in at 5*l* 15s, but since partly sold at 5*l* 10s to 5*l* 12s 6d. Brazil sold at 65*l* to 93*l* for branch wood, second and first piles.

Lac Dye.—153 chests low and ordinary qualities were bought in at 1½d to 2¼d per lb.

Dyestuffs.—Cutch is quiet, but 26s 6d has been refused privately for a large quantity, and 27s to 27s 6d paid for a few parcels. Gambier sells rather slowly at 17s 6d to 18s. By auction, 380 bales were taken in at 17s 6d to 18s 6d per cwt. Safflower is dull.

Drugs, &c.—Camphor has further advanced, and cannot be obtained under 8*l* 10s per cwt on the spot, or to arrive. Shellac is higher, good native orange having sold at 10*l* per cwt.

Hides.—The sales of East India, held yesterday, went off steadily, holders accepting a decline of ¼d per lb for the better sorts suitable to the home trade.

Linseed.—Two floating cargoes of Azoff have sold at 49s 6d for the United Kingdom, without guarantee as to quality; and 15,000 quarters, July and August shipment, at 50s upon the usual conditions. On the spot, prices are firmer: Calcutta, 49s 6d to 50s; Bombay, 52s per quarter.

Metals.—The market has not experienced any material change this week generally, excepting for Scotch pig iron, which advanced to 52s 6d per ton yesterday. Spelter has been sold at 20*l* 2s 6d to 20*l* 5s ex ship. Foreign tin has been dull: Straits, 131s to 132s; Banca, 137s. A moderate inquiry prevails for English. Copper is firm: Burra quoted 106*l* 10 to 107*l* per ton.

Hemp.—No sales of importance have been made in Manilla by private contract. Clean Petersburg is quoted 29*l* 10s. The jute market market has been unsettled. On Wednesday, the sales went off irregularly, and 6,470 bales about two-thirds sold, some marks ruling 5s to 10s cheaper: common to fine, 13*l* 5s to 22*l* 7s 6d; low, from Bombay, 12*l* 15s per ton.

Oils.—Sperm is in good demand at 95*l* to 96*l*, being 1*l* higher. Pale seal quiet at 35*l* per tun. In the absence of transactions, quotations for olive are quite nominal. Cocoa-nut has been quiet, but remains firm: Ceylon, 46s 6d; Cochin, 47s 6d, for good qualities. Several parcels of fine palm are reported sold at 45s. Rape is not at all active: foreign refined, 44s to 45s; brown, 41s 6d to 42s; and 2s more required for delivery in the last four months of the year. There has not been any change in linseed oil, which closes at 28s 7½d to 28s 9d on the spot, and 29s 3d to 29s 6d per cwt for delivery in the last four months.

Turpentine.—2,000 barrels rough have sold this week at 8s 9d. Spirits sell slowly. Present quotation for American drawn, 32s 6d to 33s per cwt.

Tallow.—The market has remained steady, and prices have varied but slightly during the week. Yesterday, there was less inquiry. First sort Petersburg Y. C. is quoted 52s 9d, and 52s 6d to 52s 9d per cwt for delivery in the last three months. The supply of town is moderate, and arrivals of foreign seem likely to prove light for some time hence.

Particulars of Tallow.—Monday, July 23.

POSTSCRIPT. Friday Evening.

Sugar.—There was only one public sale to-day, consisting of 238 casks Barbadoes and 50 casks Demerara, which went at previous rates. The market remains firm, although not active. Sales of West India for the week reach 2,713 casks.

Coffee.—192 casks 68 barrels,809 barrels plantation; 832 bags native, and 1,215 bags Costa Rica, went at previous quotations.

Cocoa.—142 bags Surinam brought 70s to 77s; 85 bags Grenada, 62s to 64s. 85 bags Trinidad were bought in at 67s to 74s per cwt.

Rice.—2,000 bags Bengal were bought in rather above the previous value. 1,000 bags sold privately at 12s to 12s 3d per cwt.

Spices.—1,076 bags African ginger were taken in: sound, 38s; mouldy went at 36s. 160 barrels Jamaica, 4*l* 6s to 8*l* 11s per cwt. 50 bags good shot Malabar, 5¾d per cwt.

Oils.—Sperm by auction sold rather dearer, from 94*l* to 97*l* 5s; Southern whale, 34*l* 5s to 35*l* 10s; cod went at 38*l*; seal, 31*l* 10s to 34*l* per tun; yellow to tinged, 280 casks palm part sold at 44s 3d to 45s 6d. Cocoa-nut: Cochin, 47s 3d to 48s 6d; Sydney, 44s 9d to 45s 6d per cwt.

Tallow.—121 casks South American sold at 51s to 53s. Y. C., 52s 9d to 53s on the spot. Town unaltered.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very quiet this week, and lower prices have been accepted. Grocery lumps are 51s 6d. Nothing doing for export. The prices of Dutch crushed come firm from Holland, but there is very little demand here. Some few sales have been made not worth noting.

Green Fruit.—The sale of West India pine apples continues brisk, and prices for these of good quality well sustained. The weather is checking the demand for lemons; some parcels Sicily, sold by Keeling and Hunt at public sale, went at a reduction of 2s to 3s per package. No inquiry for nuts, fruit of home growth being preferred.

Dry Fruit.—The market for currants is very firmly supported, and is advance on last week's prices has, in most instances, been paid. No further telegrams of importance have been received from Greece. Accounts from Turkey and Denia continue to speak of a large crop of raisins.

English Wool.—Trade very quiet, and where sales are pressed prices in favour of buyers.

Colonial and Foreign Wool.—The sales progress very firmly at the opening rates.

Flax.—Market firm at the quotations.

Hemp.—Market steady, and a fair business doing at the quotations this week.

Cotton.—Sales of cotton wool from Friday, 20th July, to Thursday, 26th, inclusive, 350 bales Surat at 3¾d to 4d for middling fair to fully fair. The demand has been limited, and the market dull, but prices remain unchanged. Yesterday 258 bales Surat, 125 sawginned, 26 Tinnivelly, and 100 Western Madras were offered at public sale; of the Surat 200 bales were sold at 2¾d to 4d for very ordinary Compta and middling fair Broach; 125 middling fair sawginned at 3¾d per lb, being at about previous rates; the remainder was bought in.

Silk.—The market remains without change since last week.

Tobacco.—A full average extent of business has been transacted in American sorts. Prices for good and fine have been more steadily supported, but for ordinary and middling sorts lower rates were submitted to.

Leather and Hides.—Throughout the past week a fair general demand was maintained for leather, but at Leadenhall on Tuesday there was not the same activity. The supplies of fresh goods were not large, but with a limited inquiry a little further concession was made in prices. Almost the only article of which the supply was not adequate to the demand was calfskins, of which the best qualities were scarce and in request.

METALS.—There is no return to animation in the metal market. Copper keeps steady in prices, but business is mostly restricted to English, in consequence of the high prices demanded for foreign. English ores keep firm in price, but foreign are a trifle easier to buy. Iron is wholly without change. Tin is quiet in demand, but prices keep steady. Spelter has changed hands at our quotations to a fair extent. Lead has found a more ready market. Tin plates move off rather slowly.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	55	0
Fat by ditto	2	9½
Yellow Russian	54	3
Melted stuff	38	6
Rough ditto	22	6
Greaves	18	0
Good dregs	7	0

Imports this week 5,643 casks.

PROVISIONS.

No alteration to notice in bacon; stock small.

Butter market firm at last week's rates; quality fair.

METROPOLITAN CATTLE MARKET.

MONDAY, July 23.—The total imports of foreign stock into London last week amounted to 15,120 head. In the corresponding week in 1859 we received 8,101; in 1858, 7,958; in 1857, 5,948; in 1856, 6,825; in 1855, 6,259; and in 1854, 5,545 head.

From our own grazing districts the arrivals of beasts were only moderate; but the total supply was rather extensive. For nearly all breeds the demand was in a sluggish state, at a decline in the quotations realised on Monday last of 2d per 8 lbs. There was a fair average number of sheep on offer, but for the most part in middling condition. On the whole the mutton trade ruled steady, at last week's quotations. Lambs were a dull inquiry, and late rates were barely supported. We were well supplied with calves, in which only a moderate business was doing, at late rates.

SUPPLIES.	July 26, 1858.	July 25, 1859.	July 23, 1860.
Beasts	4392	4140	4650
Sheep and Lambs	26920	28900	28040
Calves	430	325	330
Pigs	480	440	240

THURSDAY, July 26.—A very limited supply of beasts—chiefly composed of foreign arrivals, in very middling condition—was on sale here to-day. The few prime breeds on offer sold steadily, at Monday's currency; otherwise the beef trade was heavy, at that day's decline in value. The show of sheep was moderate, and the mutton trade was firm, at full quotations. There was a full average business doing in lambs, at quite previous rates. We had a fair sale for calves, on former terms.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	6	3	10	Prime Southdown sheep	5	4	5	6
Second quality ditto	4	0	4	4	Large coarse calves	4	0	5	0
Prime large oxen	4	6	5	0	Prime small ditto	5	2	5	6
Prime Scots, &c.	5	2	5	4	Large hogs	4	0	4	6
Coarse and inferior sheep	3	10	4	2	Small porkers	4	8	5	0
Second quality ditto	4	4	4	8	Suckling calves...each	20	0	23	0
Prime coarse-woolled do.	4	10	5	2	Quarter old store pigs	22	0	29	0

Lambs, 5s 8d to 6s 8d.

Total supply—Beasts, 792; sheep and lambs, 10,100; calves, 512; pigs, 312.
Foreign supply—Beasts, 600; sheep, 2,000; calves, 330.

NEWGATE AND LEADENHALL.

FRIDAY, July 27.—Each kind of prime meat, the supply of which is limited, moves off steadily, at full quotations. Otherwise, the trade is heavy, at barely late rates.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	3	0	3	6	Mutton, inferior	3	6	4	0
Middling ditto	3	8	4	4	— middling	4	2	4	6
Prime large	4	6	4	8	— prime	4	8	5	2
Prime small	4	8	4	10	Large pork	4	0	4	6
Veal	4	0	5	0	Small pork	4	8	5	2

Lamb, 5s 0d to 5s 10d.

HOP MARKET.

BOROUGH, Monday, July 23.—The variable weather of the last week has operated most unfavourably on the hop plant, stopping the growth of the weak bine, and materially increasing the vermin on the strong and healthy bine in the best districts. The whole of the plantations are more or less infected with vermin, and the prospect of even a moderate crop is daily becoming less. The duty has receded to 125,000*l*, with none in favour. Our market is very active at the following currency:—Mid and East Kents, 90s, 120s, 147s; Weald of Kents, 90s, 100s, 112s; Sussex, 75s, 92s, 100s.

FRIDAY, July 27.—The accounts from the plantations continue to come very bad. Duty, 120,000*l*. Market firm.

POTATO MARKET.

BOROUGH AND SPITALFIELDS, Monday, July 23.—Our markets are well supplied with new potatoes, in fair condition. A steady business is doing, and coarse qualities are selling at from 160s to 200s per ton. Last week's imports were 158 baskets from Dunkirk, 54 from Guernsey, 15 from Hamburg, 5 from Ostend, 837 from Rotterdam, and 58 cases from Oporto.

WATERSIDE, Thursday, July 26.—The supplies of new potatoes are good at this market, and the arrivals are on the increase. A fair trade is doing, at from 70s to 90s for Shaws, and 50s to 60s for middlings per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* 0s to 5*l* 0s; new ditto, 2*l* 15s to 4*l* 0s; old clover, 4*l* to 6*l*; new ditto, 3*l* 15s to 4*l* 18s; and straw, 1*l* 15s to 2*l* 5s per load. A fair demand.

CUMBERLAND.—Old meadow hay, 3*l* 3s to 5*l* 5s; new ditto, 2*l* 16s to 4*l* 0s; old clover, 4*l* to 6*l*; new ditto, 3*l* 15s to 5*l* 0s; and straw, 1*l* 16s to 2*l* 5s per load. Trade steady.

WHITECHAPEL.—Old meadow hay, 3*l* to 5*l* 0s; new ditto, 2*l* 16s to 4*l* 0s; old clover, 4*l* to 6*l* 6s; new ditto, 3*l* 15s to 5*l*; and straw, 1*l* 14s to 2*l* 5s per load. A slow trade.

COAL MARKET.

FRIDAY, July 27.—Wall's-end:—Acorn Close 17s 6d—Kepier Grange 18s 3d—Russell Hettons 18s 3d—Braddyll's Hetton 18s 3d—Gosforth 17s 3d—Tanfield Moor 13s 3d—South Hetton 19s 6d—Wylam 16s—Bebside Hartley 16s—Davidson's Hartley 16s—Craghead Hartley 15s—Lambert's Hartley 15s 9d—Grey's Hartley 15s 3d—Pease's West 15s. Ships at market, 96.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 27.—We have a fair inquiry for all useful classes of foreign, and prices are well supported. Altogether the market exhibits a very healthy tone, and if the weather continues favourable for the coming harvest, a higher range of prices is generally expected.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, July 27.—The grain market is firm. Wheat 1d dearer, with good consumptive demand. Flour active, at full rates. Maize a turn in seller's favour. Oats and oatmeal steady. New Saidi beans scarce, at 35s.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, JULY 27.—The market for manufactured iron remains quiet, without change in prices, but with a fair demand for the better descriptions of iron. In Scotch pig iron there have been some slight fluctuations in price during the week, with some speculative business doing. No change whatever to report in copper, which continues very quiet. Lead is still dull.

The Gazette.

TUESDAY, July 24.

BANKRUPTS.

W. Cook, King street, Regent street, coachbuilder.
W. G. Gibson, Godalming, tanner.
J. Green, Philpot lane, commission agent.

CRYSTAL PALACE.—The Art-Union established 1858 again rapidly approaches completion with increasing success. The subscription list, already more numerous than last year, closes on the last day of July, and the drawing for the prizes will take place at the Crystal Palace early in August. Many works of great beauty in ceramics, glass, metal, chromo-lithography, photography, &c., have been selected for presentation, and the prizes, in addition to the above, comprise paintings, small marble figures by artists of eminence, with numerous other works of taste and *virtu*.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending July 14 amounted to 558,530*l*, and for the corresponding week of last year to 520,835*l*, showing an increase of 37,695*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 246,929*l*, and for the corresponding period of 1859 to 234,136*l*, showing an increase of 12,793*l*.

LANCASHIRE AND YORKSHIRE.— At a meeting of the directors of this company, held on Tuesday at Manchester, it was decided to recommend the proprietors at their next meeting to declare a dividend for the half-year ending the 30th of June last at the rate of 5½ per cent. per annum, less income tax.

MADRAS IRRIGATION AND CANAL.—It appears that the works of this company are proceeding satisfactorily. The temporary dam across the Tumbuddra had been established on the 30th of May. The total length of the dam was 1,131 yards, and the quantity of stone deposited 17,600 tons. The rapidity with which this had been done was considered by the Madras Government to reflect very great credit on the engineers concerned. The dam would, to a certain extent, give the command of the water of the river, and it was expected that measures would be taken to turn some portion of the water to account in the present year.

LONDON, BRIGHTON, AND SOUTH COAST.—The half-yearly report of the directors of this company states that the amount of capital raised to the 30th of June last was 9,596,396*l*, consisting of 1,829,875*l* mortgage debt, 641,910*l* debenture stock, 2,506,057*l* preference capital, and 4,618,554*l* consolidated stock. The issue of debenture stock was proceeding satisfactorily, 172,510*l* having been taken up during the past half-year.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, July 23.—The railway market continued generally steady, notwithstanding the absence of business. The transactions to-day were very limited, the most important feature being a rise of ¼ per cent. in Sheffield. Midland, Caledonian, Great Northern, and Great Western were also higher, while South-Western, North British, and York and North Midland showed a fractional decline. In the colonial market, Great Western of Canada shares declined. East Indian railway stock was also lower, closing at 99½ to ¾. No material alteration occurred in foreign descriptions. South Austrian and Lombardo-Venetian continued dull at ¼ to ½ dis. American railway securities were quiet but firm, and the shares of the Illinois Central, Michigan Central, New York Central, and New York and Erie improved.

TUESDAY, July 24.—In the railway market there was a fresh rise in Sheffield, and other stocks were generally firm. In the colonial market East Indian railway stock declined to 99 to ½, while Grand Trunk of Canada remained without change, at 27½ to 28. Ceylon shares were heavy. Foreign descriptions, especially French, were also flat. In American railway securities the bonds of the New York and Erie improved. Illinois Central shares were also firm, at 36 to 35 discount. Mines, joint stock banks, and miscellaneous descriptions closed without alteration of importance.

WEDNESDAY, July 25.—The railway market showed increased firmness to-day, especially as regards the heavier stocks, most of which closed steadily at a rise of ½ to 1 per cent. Lancashire and Yorkshire improved 1 per cent. on the announcement of the proposed dividend. In the colonial market, Indian stocks showed some heaviness. Grand Trunk of Canada remained at 27½ to 28. French shares were slightly firmer. In American railway securities the bonds and shares of the Michigan Southern advanced. Mines were inactive, and in several cases exhibited a reduction.

THURSDAY, July 26.—The railway market continued to improve on the investments of the public, which continue daily even at present high prices the and the consequent scarcity of stock. No transactions of importance took place in foreign railway securities, and almost the only change was a fractional rise in South Austrian and Lombardo-Venetian, the final price being exactly ¼ dis. Mines continued with a dull tendency. Joint stock banks likewise were heavy. In miscellaneous descriptions, Peninsular and Oriental Steam improved, while a decline occurred in Electric Telegraph, South Australian Land, and Van Diemen's Land.

FRIDAY, July 27.—The railway share market to-day was very inactive, and in two or three instances prices were quoted slightly lower than they closed yesterday. Generally, however, steadiness prevails.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES,

Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By C. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and o be had of all booksellers

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S, &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of al booksellers.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Aldermarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12 3, and 6 till 8. Sundays from 10 till 1.

AT HAMBLY HOUSE ACADEMY, Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. H. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

MEDICAL ADVICE.

DR LA'MERT, HONORARY Member of the London Hospital Medical Society, Registered Licentiate of the Royal Society of Apothecaries, &c., may be CONSULTED on the Functional Derangements of the Nervous and Reproductive System, and on the various forms of Local and Constitutional Debility, from Eleven till Two, and from Six till Eight, at his residence,

37 BEDFORD SQUARE, London.

The 71st Edition—SELF-PRESERVATION: An Essay on the Secret Infirmities of Youth and Maturity, price 6d, or post free, in a sealed envelope, by Mann, 39 Cornhill, or by the Author, for Seven stamps.

CONTENTS.

SECTION I.—The Physiology of the Generative Organs.

SECTION II.—Puberty—Manhood—The Morals of Generative Physiology—True and False Morality.

SECTION III.—Marriage in its Moral, Social, and Physical Relations—Happy and Unhappy Unions—Conjugal Expectancies and Disappointments.

SECTION IV.—Youthful abuse—The Secret Causes of Sterility, Impotence, and other Self-inflicted Miseries.

SECTION V.—Spermatorrhœa, or Chronic Impotence—Its History, Causes, and Moral Consequences—The Sterility of age.

SECTION VI.—The Author's principles of treatment, as applied to these Disorders, Medical, Dietetic, and General, derived from twenty years' practice—Dangerous Results of Empirical Treatment.

MR LEWIS AND SON,
113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible systems, insures perfection in any of the above branches after a few easy and interesting lessons Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand.

IMPORTANT NOTICE.
GLENFIELD PATENT STARCH
is the only STARCH used in HER MAJESTY'S LAUNDRY.
And as some unprincipal Parties are now making and offering for Sale an Imitation of the
GLENFIELD STARCH,
we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.
WOTHERSPOON and CO., Glasgow and London.

SEQUELIN'S OIL.—
This vegetable preparation is most successful as an instantaneous restorative, strengthening weak hair, opening pores of the skin, most effectual in the growth of hair, eyebrows, whiskers, and moustaches, &c., preventing its falling off, curing the scurvy, giving also brightness, softness, and keeping its natural colour, and checking the most obstinate baldness in two months. One bottle is sufficient. Price one guinea. The money returned if not effectual. Sold by the Inventor, Sequelin, 40 Wharton street, Lloyd square, W.C., London. The most satisfactory testimonials and references on application.

DEANE'S TWO-HOLE BLACK PENS
which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity ha induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"G. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

ALLSOPP'S PALE OR BITTER
ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the March Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William st. City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	St Vincent street
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

A TOILETTE REQUISITE FOR THE SUMMER.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

THE BEST REMEDY FOR INDIGESTION.
NORTON'S CAMOMILE PILLS
are confidently recommended as a simple but certain remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." NORTON'S PILLS act as a powerful tonic and general aperient; are mild in their operation; safe under any circumstances; and thousands of persons can now bear testimony to the benefits to be derived from their use.—Sold in Bottles at 1s 1½d, 2s 9d, and 11s each, in every town in the kingdom.

CAUTION!—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the various imitations

FREDERICK DENT
Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

VOLUNTEER PIPE.—
RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

DINNEFORD'S
PURE FLUID MAGNESIA
has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER
TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss. 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE MEDICINE.—
For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD —Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and Incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most infeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn Norfolk.——Cure No 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 21 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co. 181 Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

HOLLOWAY'S PILLS
and OINTMENT.—Established Household Remedies.—No medicines are more efficient or more safe under any circumstances than Holloway's well-known preparations, and none are, therefore, so well adapted for family use. They possess the active and essential therapeutical powers presented by the vegetable kingdom for expelling the causes of disease from the human system. Both Holloway's Pills and Ointment are alike devoid of all mineral and vegetable poisons. They may be used with equal safety to the infant as to the adult, being simple but efficacious in their operation. No household should be without a supply of Holloway's Pills and Ointment, as they will be found always useful in restoring from accidental injuries, constitutional complaints, or obstructed functions.

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture Manufacturers 196 Tottenham court road W.

OVERLAND ROUTE.—COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month; for Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Mauritius, Keenion, King George's Sound, Melbourne, and Sydney by the steamers leaving Southampton on the 20th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

MARGATE and HACK every Sunday at 9 morning, returning at half-past 3 afternoon (one fare).
MARGATE, RAMSGATE, and HERNE BAY—Via Thames Haven, from Fenchurch street Station.
Offices 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

HEAD OFFICE—No. 9 ST ANDREW SQUARE, EDINBURGH.

ESTABLISHED 1815.

This Society is constituted on purely Mutual principles. The Members (Policy-holders) alone form the Society, there being no Proprietary Body (Shareholders) controlling its affairs and participating in the Profits arising from the Contributions of the Members. The whole funds belong to the Assured, and the profits are divided among them alone.

These principles have found very extensive acceptance in the past operations of this Society, having been applied in such a way as to afford the amplest returns to the members, while, at the same time, careful regard has been had to the establishment and preservation of that unquestionable security, which is essential in the business of Life Assurance.

The Realised and Invested Funds at 31st December last Amounted to
THREE MILLIONS FIVE HUNDRED and EIGHTEEN THOUSAND TWO HUNDRED and THIRTY POUNDS,
which exceeded the whole Liabilities, and yielded a Surplus Fund of
NINE HUNDRED and NINETY-TWO THOUSAND SIX HUNDRED and THREE POUNDS,
out of which there was reserved as a Guarantee Fund
THREE HUNDRED and THIRTY THOUSAND EIGHT HUNDRED and SIXTY-EIGHT POUNDS,
and the remainder of this Surplus Fund
(Less an unappropriated Balance of £11,860), amounting to
SIX HUNDRED and FORTY-NINE THOUSAND EIGHT HUNDRED and SIXTY-SEVEN POUNDS,
being divided among the Members according their respective rights, yielded a
BONUS of from £1 12s 6d to £3 6s per cent. per annum on the original sums assured,
besides providing a prospective Bonus upon an increased ratio for such policies as shall become claims prior to next division of Profits, all which taken together are equivalent to
An AVERAGE BONUS of £2 5s 8d per cent. per annum, one of the largest Bonuses ever declared by any office.

Viewing the Policies of the SCOTTISH WIDOWS' FUND simply as Investments for Money, a Table, attached to the Report read at the Annual General Meeting of Members held on 25th May, 1860, shows the lowest Bonus declared (on Policies newly opened) to be 58½ per cent., and the highest Bonus (on the oldest Policies) to be 111 per cent. of the Premiums paid. Thus, in the latter case, more than the whole premiums paid have been added in bonuses, the interest alone has been more than sufficient to provide the original sum assured.

For example:—

	£	s	d
A. B., aged 33, opened a Policy in 1819, for	1,000	0	0
There has been added as bonuses	1,262	1	5
Present amount of Policy	2,262	1	5
Deduct from this amount the Principal of the whole Premiums paid	1,136	0	7
The difference shows the Amount of Insurance purchased by the Interest alone	1,126	0	10

Being an improvement of Money which may challenge comparison with many other modes of investing sums of small amount, the advantage of an assured sum in the event of death at any time after the commencement of the Policy being also secured.

The Substantial Benefits accruing under the Society's System are not confined to a favoured class of Policies, but are proportionally distributed among the whole body of Assured Members.

New Entrants may safely rely on the continuance of a Scale of Bonus as ample as that which has hitherto prevailed, because, irrespective of a permanent guarantee fund, the margin of Profit in the Premiums payable, which forms the main index of any Life Assurance Society's Bonus-giving power for the future, remains wholly untouched in the additions hitherto declared.

The magnitude and select character of the Business,—the very small average of Expenses of Management,—the favourable rate of mortality and interest,—and all the other elements productive of Surplus, are therefore combined in the position and prospects of the Society, and afford inducements and guarantees to intending Assurers of the most satisfactory kind.

The Directors, in terms of the Constitution and Bye-Laws, afford to Members every facility and privilege consistent with due regard to the general interest of the Society.—In particular—

(1.) Declared Bonuses may be surrendered for present cash, or applied in reduction of future Premiums, the right to share in subsequent Divisions on the Sums remaining Assured not being thereby lost.
(2.) Surrender Value is allowed upon every discontinued Policy, although no more than One Premium has been paid.
(3.) When Policies attain the value of £50, Loans are made to Members without expense, and at a medium rate of interest, as upon first-class securities.
(4.) Members are permitted to Travel and Reside in any part of the World, either without charge, or subject to moderate extra rates of Premium suitable to the risk.
(5.) In the Settlement of Claims, the wishes and convenience of parties are carefully attended to, and the full sums due are made payable without charge in any part of the Kingdom.
(6.) Members are allowed, without any Extra Charge, to serve in Volunteer Rifle and Artillery Corps, within the United Kingdom.

Reports, Prospectuses, Forms of Proposal, and all information, will be promptly supplied from the Head office and Agencies.

June, 1860. SAMUEL RALEIGH, Manager.

James Harris, 38 St George's square, Belgrave road, Pimlico.
Benton Seeley, Islington green, Agent for Islington District.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

NINTH REPORT OF THE BANK OF LONDON.

Head Banking House—Threadneedle street.
Charing Cross Branch.—No. 450 West Strand.

DIRECTORS.

CHAIRMAN—Sir John Villiers Shelley, Bart., M.P.
VICE-CHAIRMAN—John Griffith Frith, Esq.

John E. Anderdon, Esq.	Thomas Luce, Esq.
Colonel William Elsey.	Henry Morris, Esq.
Thomas Gooch, Esq.	Sir H. Muggeridge, Kt.Ald.
John Johnson, Esq.	Robert Porter, Esq.
Charles Joyce, Esq.	Alfred Wilson, Esq.

MANAGER—Matthew Marshall, Jun., Esq.
SECRETARY—C. J. H. Allen, Esq.

At the Fifth Annual General Meeting of the Shareholders, held at the London Tavern, Bishopsgate street, on Tuesday, the 24th of July, 1860, after authentication of the Register of Shareholders, by affixing the common seal of the Company, the following Report was read by the Secretary:—

The accounts which the Directors have now the pleasure of laying before the shareholders show that the profit for the half-year ending 30th June amounts to £30,141 10s 1d.

The operations of the past year have been unusually free from bad debts, but the announcements of failures which have been communicated since the accounts were made up prove the necessity for providing, in times of prosperity, for such contingencies; and the Directors have on this occasion set aside a considerable sum for this object.

After defraying the ordinary charges of the half-year, making the usual allowances for preliminary expenses, for lease and buildings at Charing Cross Branch, and for rebate on bills discounted not yet due, there remains for disposal the sum of £14,721 14s 10d. From this amount the Directors declare a dividend at the rate of £5 per cent. per annum, free from income tax, and they transfer £6,600 to the Reserve Fund, thereby increasing that fund to £27,000; the balance, viz., £621 4s 10d, is carried to Profit and Loss Account of the current half-year.

The Shareholders will perceive that the sum of £4,742 16s 6d has been paid to the Bank under the decree of the Master of the Rolls, which amount is held unappropriated, the defendant having given notice of appeal.

It will also be observed that the Directors have carried out the suggestion which was made at the last meeting, that the amount invested in freehold property producing a rental, be distinguished in the accounts from the sum representing that portion of the premises in the occupation of the Bank.

The retiring Directors are Charles Joyce, Esq., Henry Morris, Esq., and John Johnson, Esq., who, being duly qualified, offer themselves for re-election.

Examined and approved, July 16, 1860.
GEORGE THOMSON, HENRY ASTE, } Auditors.

It was resolved unanimously,—
That the Report now read be received and adopted.

The Chairman announced that the dividend would be payable on and after Wednesday, the 1st August, at the Head Office, Threadneedle street.

It was resolved unanimously,—
That Charles Joyce, Esq.,
John Johnson, Esq., and
Henry Morris, Esq.,
be re-elected Directors of the Bank.

That George Thomson, Esq.,
Henry Aste, Esq., and
Alfred Lamb, Esq.,
be elected Auditors for the year ensuing.

That the best thanks of the shareholders be tendered to the Directors, for the excellent manner in which the business of the Bank has been conducted.

That the thanks of the meeting be given to Mr Marshall, the Manager, Mr Allen, the Secretary, and the other Officers of the Bank, for their zealous exertions in the discharge of their several duties.

Extracted from the Minutes.
C. J. H. ALLEN, Secretary.

BANK OF LONDON.—TERMS OF BUSINESS.

Current or Drawing Accounts will be made up to the 30th of June and the 31st of December in each year; and if the credit balance shall not at any time during the half-year have been below £500, interest at the rate of Two per cent. per annum will be allowed on the minimum monthly balance. If not below £200, interest at the rate of One per cent. per annum will be allowed on the minimum monthly balances; but if under £200, no interest will be allowed.

Deposit Accounts.—The rate of interest allowed on money placed on deposit at seven days' notice of withdrawal is regulated by the market value of money, as announced by this Bank, from time to time, by public advertisement.

The agency of country and foreign banks, whether joint stock or private, is undertaken.

Circular notes and letters of credit, free of charge, are issued payable by the correspondents of the Bank in every city and town of importance in all quarters of the globe.

Purchases and sales of stock, shares, and other securities effected, on the usual charges.

Dividends received for customers without charge.

C. J. H. ALLEN, Secretary.

TRADE MARK.

BROWN AND POLSON'S PATENT CORN FLOUR.—

The LANCET states,

"This is superior to anything of the kind known."—The most wholesome part of the best Indian corn, prepared by a process patented for the Three Kingdoms and France, and wherever it becomes known obtains great favour for Puddings, Custards, Blancmange; all the uses of the finest arrow root, and especially suited to the delicacy of Children and Invalids.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Manchester, Dublin, and London.

NOTICE.—"BEWARE OF IMITATIONS."

LEA AND PERRINS' "WORCESTERSHIRE SAUCE"

Is pronounced by Connoisseurs to be a most agreeable addition to every variety of dish.

"*" See the names of Lea and Perrins upon every label, bottle, and stopper.

Sold by Messrs Crosse and Blackwell, London; and by dealers in sauces generally.

Sole Manufacturers—
LEA and PERRINS, WORCESTER.

SOYER'S SULTANA SAUCE

Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1853."
6 Edwards street, Portman square, London.

CROSSE AND BLACKWELL,

Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchovy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

THE CONSERVATIVE LAND SOCIETY.—

Established 7th September, 1852, and Enrolled under the Act of Parliament 6 and 7 William IV., cap. 32.

TRUSTEES.

The Viscount Ranelagh. | J. C. Cobbold, Esq., M.P.

DEPOSIT DEPARTMENT.—Sums, large or small, may be deposited at the offices daily. Interest allowed is now four per cent. per annum, payable half-yearly. Withdrawals of deposits paid every Wednesday, under £100; from £100 to £500, at 21 days'; and £500 and upwards on one month's notice. Investors under the Deposit Department do not become members of the Society. Remittances may be made in cheques, half-notes, post-office orders, &c.

Prospectuses will be sent free of charge to any part of the world. Offices, 33 Norfolk street, Strand, W.C., which are open from 10 to 5, except on Saturdays, and then from 10 to 2 o'clock.

CHARLES LEWIS GRUNEISEN, Secretary.

MADRAS RAILWAY COMPANY.

—The Directors are prepared to receive Applications for Loans on Debentures for four or five years, from the 1st July, 1860, at 5 per cent. per annum, payment of the principal and interest being guaranteed by the Secretary of State for India in Council.

Particulars and forms of application may be obtained at the offices of the Company.

JAMES WALKER, Managing Director.
No. 33 New Broad street, London, E.C., June 22, 1860.

GREAT INDIAN PENINSULA RAILWAY COMPANY.—

The Directors are prepared to receive LOANS on DEBENTURES of £100 and upwards, for five or seven years, from the 1st July inst., at 5 per cent. per annum interest, payment of both principal and interest being guaranteed by the Secretary of State for India in Council, and the interest being payable Half-yearly, on the 10th January and 10th July, at the London and County Bank, Lombard street, London, by means of Coupons attached to the Debentures. Forms of proposal may be obtained on application at this office. THOS. R. WATT, Secretary.

Company's offices, 3 New Broad street,
London, E.C., 13th July, 1860.

THE EAST INDIAN RAILWAY COMPANY require STORES of the following kind.

Particulars may be obtained by application at the Company's offices, Alderman's walk, New Broad street, London.

Galvanised Corrugated Iron.
Felt.
Composition Nails
Iron Wood Screws.
Iron Screws.
Iron Coach Screws.

Tenders, which must include all charges for packing and delivery, free alongside in any dock or on any wharf, or in any port of the stream, in the ports of London or Liverpool, are to be made on or before 12 at noon, on Tuesday, the 7th August next. Tenders must be endorsed "Tenders for Stores, &c."—By order of the Board, D. I. NOAD, Secretary.

East Indian Railway House, Alderman's walk,
New Broad street, London, July 26, 1860.

EAST INDIAN RAILWAY COMPANY.

The Directors of the East Indian Railway Company are prepared to receive Applications for Debentures at par to the extent of £1,500,000, bearing interest at the rate of 5 per cent. per annum, which will be payable by coupon at the Bank of England.

The payment of the principal and interest is guaranteed by the Secretary of State for India in Council.

The bonds will be for five years, transferable by endorsement under the provisions of the 16 and 17 Vic., cap. 59, without stamp, and the holders may renew them for a second term of five years upon giving notice to such effect at any time within twelve months preceding their maturity. Failing such notice, the bonds will be paid off at the expiration of the first five years on presentation at the Bank of England.

Payments will be required as follows:—
25 per cent. on allotment,
25 per cent. on Sept. 10, 1860,
25 per cent. on Oct. 10, 1860,
25 per cent. on Nov. 10, 1860,
or the bonds may be paid in full on allotment.

Interest will accrue on the respective payments from the above dates.

Pending the payment of the several instalments, scrip receipts will be issued, which will be exchanged for bonds with interest coupons annexed after all payments shall have been completed.

In default of the payment of any instalment on the day fixed, the previous payments will be forfeited.

No scrip receipt or bond will be issued for a less sum than £100.

Applications for the bonds will be received at the offices of the Company in the following form, until the 30th July, 1860, inclusive, when the allotment will be proceeded with.—By order of the Board,

D. I. NOAD, Secretary.

East Indian Railway House, Alderman's walk,
New Broad street, London, July 17, 1860.

FORM OF APPLICATION.

To the Secretary of the East Indian Railway Company.

Sir,—I beg to apply for bonds to the extent of £ in terms of the notice issued by the East Indian Railway Company under date the 17th July, 1860, and I hereby agree to accept the same, or any less amount that may be allotted to me, and to pay the full amount thereof.

The Political Economist.

THE HOUSE OF COMMONS AND MR GLADSTONE'S RESOLUTION RESPECTING FOREIGN PAPER.

When the present Session of Parliament commenced, there were many doubts as to the immediate political future. It was said that the working majority of the Ministry was but a small one—that it included many 'independent members' who were by no means 'sure votes'—that the Cabinet was a Cabinet of 'all the talents,' who might not be united—that, on the other hand, there were three hundred Conservative votes ready to be given in season and out of season for Lord Derby. All these considerations seemed to make it likely that the Session might be a disturbed one—that on some points the Executive might be left in a minority—that upon some Lord Derby might achieve a trimph. But no one could have predicted that there could be any such triumph upon a simple alternative of Free Trade or Protection. Ever since 1852 the Conservative party have been ready to admit, in words at least, the abstract principle of free commerce. The Liberal party were, it was believed, really and sincerely agreed upon it. Yet the fact is now certain that Mr Disraeli has retained his followers in town to resist the equalisation of the duties upon foreign and upon home-made paper—that an amendment is to be moved to which it is said some Liberal members attach importance—that a meeting of the Liberal party is to be held on the summons of the Prime Minister to consider the subject.

Nor is this the whole case, strange as it may seem. If there were any principle on which it was probable that the Liberal party would be agreed beside that of Free Trade, it was the strict inviolability of treaty engagements. Yet the point on which a party discussion is now to be raised involves the breach of an engagement by treaty with a foreign country. The Commercial Treaty with France was received in this country, and especially by the Liberal party, with applause. The Budget, which was mainly founded on it, was carried by the unprecedented majority of one hundred and thirteen. All the Customs duties which were necessary to carry it out were voted with readiness and without exception. But as to the Customs duty on paper there was unfortunately a delay. Mr Gladstone had, as we all know, proposed to repeal altogether the Excise duty on home-made paper; and, if he had been successful in obtaining that repeal, it would have been unnecessary to propose any Customs duty on foreign paper. No resolution respecting paper was therefore proposed, when all the other resolutions necessary to carry out the treaty were proposed and carried. It has been left till now, when the enthusiasm for the French treaty has abated, and a Protectionist interest has had time to make its voice heard by all who will heed it.

We were never among the most extremo admirers of the French treaty. We always said that any effect it would produce would be but gradual—that any substantial change in our commercial relations that might be caused by it would only show itself very slowly, and after a very long interval—that the first enthusiasm for it was too immoderate to be enduring. But we did not expect to have to prove that as this treaty had been made, as it had been accepted by the acclamation of Parliament, it ought most strictly to be carried out. Yet such is the point on which a division in the House af Commons is now to be taken.

Mr Gladstone is to move that the Customs duty on paper be reduced to the level of the Excise duty; and an amendment has been moved to the following effect:—"That, without desiring to prejudice the question of a reduction at a future period of the Customs duty on French books and paper, this Committee does not think fit at present to assent to such reduction."

The alleged ground for this resolution is economical, and we dealt with it last week at length, and have elsewhere said what more seemed necessary respecting it. But it would show a great ignorance of actual politics to believe that this economical ground was with many members of Parliament the real ground. The objection with many is not to the motion, but to the mover. The Conservative party feel this objection strongly, and many of the Liberal party feel it almost equally strongly from many causes which it is not necessary to enumerate at length. Mr Gladstone is unpopular in the House. It is natural that the Conservatives, with whom he began his career, should now be alienated from him. It is inevitable that so zealous, so unceasingly argumentative, and, it may be said without disrespect, so contentious a Minister should sooner or later stir up discontent around him. It was inevitable that, by relying, or seeming to rely, only on the support of a single section of the Liberal party, he should rather estrange from him those who are not themselves attached to that section. But what are these defects of Mr Gladstone to the purpose? Multiply them a hundredfold, are *they* reasons for which we should depart from the principle of Free Trade,—why we should break in substance and effect the treaty we have made with France? Is it not ridiculous even to speak of such personal questions in the same breath with such great questions of principle and of policy; is it not absurd even to suppose that any one could be guided by the former rather than by the latter? But irritation is a great power in all parts of active life, and in political life as much as elsewhere. A vague and confused feeling prevents men from considering an important subject fully and fairly; it blinds their eyes to real facts; it induces them to do something which they would never do otherwise, and which in a very short time they can scarcely believe that they really did; which they regret as long as they live. We do not believe that any member of the Liberal party will upon consideration act in this manner, but some of them seem at present to be tempted to do so.

THE NEAPOLITAN GOVERNMENT AND GENERAL GARIBALDI.

THE "Convention" at Messina between General Clary and Colonel Medici on the part of Garibaldi, is now reduced by the official report in the *Moniteur* to the proportions of a purely military arrangement, "from motives of humanity," to facilitate the complete evacuation of Sicily by the Neapolitan troops. The numerous speculations, therefore, as to its ulterior political significance, which were given rise to by its first telegraphic announcement, are so far set at rest, and we may look upon it as a step towards the realisation of that resolution of the Neapolitan Ministry which was authenticated by Lord J. Russell in his place in the House of Commons, and of which the Milazzo affair appeared to be a practical repudiation. The question therefore arises, to what untoward cause we owe the temporary interruption of this pacific solution of the first stage of the Sicilian question, and how it is that it is now resumed? The very fact of the consent of Garibaldi being given to this suspension of hostilities at the very moment when his tide of success had been swollen by another victory, seems to raise the presumption that he was not responsible for the renewal of hostilities at Milazzo, as the official journal of Naples insinuates. The complaint of the organ of the Neapolitan Government that an unnecessary effusion of blood had taken place while negotiations for an amicable arrangement were going on, and when the evacuation of the Neapolitan garrisons had been actually ordered, contrasts strangely with the aggressive movements of the Neapolitan Colonel Bosco, which were the immediate cause of the recent engagement, and gives us an additional means of estimating how far the form of a constitutional Government at Naples is of value as a guarantee for good faith in a Bourbon King. There can be no doubt that Colonel Bosco acted under the secret orders of the remnant of the reactionist Camarilla still assembled at Gaëta, and in direct contravention of the orders of the Neapolitan Ministry conveyed to the Commander at Messina, General Clary; and this conflict of authority and double action among the Neapolitan authorities, while they vindicate the conduct of Garibaldi at Milazzo, and may explain to some extent his subsequent acquiescence in an armistice, confirm strongly what we ventured to urge last week on the unreality and unsoundness of the present constitutional experiment at Naples.

To the facts which we then mentioned respecting the antecedents and connections of the men to whom is intrusted the diplomacy of the professedly constitutional Government of the Neapolitan Bourbons, we might have added others not less worthy of attention. The present Minister of War, General Pianelli, now a professed enthusiastic admirer of constitutionalism, is a man whose family connections are entirely reactionary, and who only six or seven months ago, when sent at the head of a corps of observation to the Abruzzi, in anticipation of a possible Garibaldian descent, distinguished himself by his military executions, and left behind him an odious memory. We spoke last week of the doubtful antecedents of the Neapolitan Envoy to the Courts of the Tuileries and St James, the Marquis de la Greca; we might have added another fact in connection with his mission. It forms a singular commentary on the warm desire professed by the Marquis for an alliance between the Government which he represented and that of Piedmont, that during his stay in London he entirely ignored the existence of a Sardinian embassy in that city, and that the Sardinian Minister was left to gather from the newspapers the information that such a person as the Neapolitan Envoy was in this country at all. In the face of facts such as these, we may be allowed to doubt whether the liberties of Southern Italy and the destinies of the whole Peninsula are safe if left to the goodwill or the capabilities of an Administration containing such anomalous ingredients. The honourable character and undoubted liberalism of some members of the Neapolitan Cabinet is but a feeble set-off against the indifference or concealed hostility of others, and the general distrust inspired by the well-known character and wishes of the King. Signor Manna, who with Liborio-Romano, the Minister of the Interior, may safely be relied upon as true Constitutionalists, are themselves nearly overwhelmed by the embarrassments of their position. The entreaties of the English Minister at Naples, to which alone the former gentleman yielded when he undertook his thankless office, may have provided a new victim to the treachery of the Bourbons, but have added no real security for the permanence of constitutional Government.

The conduct of Garibaldi, under these circumstances, is such as must approve itself to all intelligent Englishmen. With the qualifications of a great General, and the single-mindedness of an upright man, he has combined in an unexpected degree the sagacity and foresight of a statesman. He has not only himself, by his long devotion to the King of Sardinia, kept one practical solution of the Italian question constantly before the Italians as well as foreign States, but he has suddued and subordinated to the idea of Italian unity thus embodied the enthusiastic republicanism of the "men of action" of the Mazzinian party, and has thus enlisted in the common cause a considerable amount of practical energy, while conciliating at the same time the anxious susceptibilities of European diplomatists, by disarming the Mazzinian movement of the obnoxious part of its creed. That it is in this sense alone that Garibaldi has identified himself to any extent with Mazzinianism, is evident from many circumstances; and from none more strikingly than from those attending the recent mission of M. Depretis, who has succeeded General Sirtori in the Vice-Dictatorship of Sicily. In the explanations given by Garibaldi to the King of Sardinia, after the expulsion of M. La Farina, it was intimated by him that he was willing to receive as the successor of that gentleman, in his quasi-official character, and as a depository of power in Sicily, one of three persons. Those thus nominated by him whom La Farina accuses of Mazzinian partialities were, besides Depretis himself, Massimo d'Azeglio and Farini. Neither of these two last will be suspected of being Mazzinians, and we believe M. Depretis is equally free from the imputation, though he was a member of the advanced party in the Chamber of Deputies at Turin. As a link between the King, if not the Government of Sardinia and the Dictator of Sicily, the presence of M. Depretis in that island, and the responsible position he has been called upon to fill, are very important. That his creed is that of Garibaldi himself—the union of all Italy under one Constitutional King—is manifest, not only from the telegram which speaks of modifications in the Sicilian Ministry in that sense, but also from a speech of the Vice-Dictator himself to the Senate of Palermo, in which he expressly lays down as his programme the establishment of one Italian Kingdom with Rome as its capital. That such is the present tendency of events and of public feeling in Italy there can be little doubt. Let us hope that the policy of intervention verbally laid down by the Emperor Napoleon in his recent letter to his Ambassador in England, will be acted upon, not only by him, but also by our own Cabinet; and that the Italians may be left to settle their own affairs according to their own best counsels, without the interference either of open enemies, or of officious friends.

FALLACIES OF PAPER PROTECTION.

THERE are three great fallacies which are prominently advanced by those who wish to maintain the present protection of the English paper-makers.

First, it is said or implied that France derives from our Commercial Treaty with her a double benefit. She sells us her paper, it is said, and she will not sell to us any of her rags. But, in truth, France will be specially injured by this policy if it should prove effectual. It is her rag-merchants who should complain. If the price of rags is kept down artificially, *they* lose, and France loses too. The natural course of labour and of capital is disturbed. Instead of her capital and her labour being able to seek the most profitable employment that is open to them, they are artificially forced into the manufacture of paper which it would be better to leave to others.

Moreover, this fallacy assumes that the price of rags in France, and in non-exporting countries generally, can be permanently kept down, although those countries, to an increasing extent, export paper. But we have shown more than once that no supposition can be less supported than this. So soon as France, or any other country similarly circumstanced, begins to export paper, the demand for rags will increase, and as rags are by their peculiar nature an article

of limited quantity, the price will rise. The supply of rags for sale is not capable of indefinite augmentation by any means, or of moderate augmentation in European countries, except at a great increase of cost, and a consequent increase of price.

Moreover, if the manufacture of paper should decline in this country, the price of rags would fall rapidly. The exact contrary would happen to that which we have shown would happen in France. Their manufacturers would have to buy a raw material which was constantly rising in price; ours would have to buy one which was continually falling.

A second fallacy is, that the producing interests of England will lose by the admission of French paper. Some writers appear to be under an apprehension that France will *give* us her paper. We are sure she will not. If paper should be imported from France into England, something we may be certain will go from hence to pay for it. This "something else" we shall produce. The effect of continuing the protection to English paper will really be injurious to the producing interests of England, and injurious to them in a point of vital principle. It will divert them to the manufacture of paper, which of themselves they would not choose, from the manufacture of "something else" which they would choose. England would be poorer by the difference between the more profitable employment of her labour and capital, and the less profitable.

A third mistake is, that the Commercial Treaty with France binds us to do what on other grounds it would not be desirable to do. The words of the treaty are certainly clear enough:—"Article VII. Her Britannic Majesty promises to recommend to Parliament to admit into the United Kingdom merchandise imported from France at a rate of duty equal to the Excise duty which is or shall be imposed upon articles of the same description in the United Kingdom. At the same time the duty chargeable upon the importation of such merchandise may be augmented by such a sum as shall be equivalent for the expenses which the system of Excise may entail upon the British producer." But there is nothing in the stipulation of this clause which binds England to do anything which it would not otherwise be her obvious interest to do. The interest of England is to buy her paper cheap, and she will be trying to make paper dear if she maintain a Customs duty which is higher, all circumstances considered, than the corresponding Excise duty. The following are the terms of the resolution which Mr Gladstone will move:—

22. That, in lieu of the duties of Customs now charged on the articles undermentioned, the following duties of Customs shall, on and after the 16th day of August, 1860, be charged thereon on importation from France, and likewise from Algeria, if the produce thereof, into Great Britain and Ireland, viz.:—

	s	d
Books, being of editions printed in or since the year 1801, bound or unbound, the cwt.	16	0
—— admitted under treaties of international copyright, the cwt.	15	0
Millboards, the cwt.	16	0
Paper, viz.:—Brown paper made of old rope or cordage only, without separating or extracting the pitch or tar therefrom, and without any mixture of other materials therewith, the cwt	16	0
Printed, painted, or stained paper hangings, or flock paper, the cwt.	14	0
Gilt, stained, coloured, embossed, and all fancy kinds, not being paper hangings, the cwt	16	0
Waste paper, or paper of any sort, not particularly enumerated or described, not otherwise charged with duty, the cwt	16	0
Pasteboard, the cwt	15	0
Prints and drawings, viz.:—Plain or coloured, the cwt.	16	0
—— admitted under treaties of international copyright, the cwt.	15	0
—— or at the option of the importer:—Single, each	0	0½
—— bound, the dozen	0	1½

23. That, in lieu of the duties of Customs now charged on the articles undermentioned, the following duties of Customs shall, on and after the 16th day of August, 1860, be charged thereon on importiaton from countries other than France and Algeria, viz.:—

	s	d
Books, being of editions printed in or since the year 1801, bound or unbound, the cwt.	16	0
—— admitted under treaties of international copyright, the cwt.	15	0
Millboards, the cwt.	16	0
Paper, viz.:—Brown paper made of old rope or cordage only, without separating or extracting the pitch or tar therefrom, and without any mixture of other materials therewith, the cwt.	16	0
Printed, painted, or stained paper hangings, or flock paper, the cwt.	14	0
Gilt, stained, coloured, embossed, and all fancy kinds, not being paper hangings, the cwt.	16	0
Waste paper, or paper of any sort, not particularly enumerated or described, not otherwise charged with duty, the cwt.	16	0
Pasteboard, the cwt.	15	0
Prints and drawings, viz.:—Plain or coloured, the cwt.	16	0
—— admitted under treaties of international copyright, the cwt.	15	0
—— or at the option of the importer:—Single, each	0	0½
—— bound, the dozen	0	1½

If the parties interested could show that the rates of Customs duty here charged were not high enough to counterbalance the incidental inconveniences of the Excise duty, we should be among the warmest advocates of their cause. But they do not attempt to show it, and the obvious inference is that the proposed rates are sufficient for the purpose for which they were designed.

THE EMPEROR'S LETTER TO COUNT PERSIGNY.

It would be miserably culpable and miserably foolish to precipitate a dispute with the Emperor Napoleon by using needless invectives or harbouring needless suspicions. The great power of France, the valour of her people, her central position, her vast *prestige*, must make her neighbours heartily desire to be on friendly terms with the Government she has chosen, whatever the form of that Government may be. The Emperor Napoleon, moreover, is not without some claims to the peculiar friendship of England. He resided for a long time amongst us; he is thoroughly acquainted with our language, our society, and our institutions; he knows far more of England, it is probable, than any of the great Sovereigns of the Continent; he certainly knows far more of it than we can expect most despotic Monarchs to know—infinitely more than Napoleon I. ever knew. If he quarrels with us, it will not be from a misconception of what we are, or from an inbred ignorance of the working of popular institutions. We ought to wish to be at peace with him, and he has a peculiar knowledge which fits him to be at peace with us.

But it is certain, notwithstanding, that Napoleon III. is a perplexing person to deal with. He is a problem. No one knows precisely what his schemes are, or what his hopes or his intentions are. Foolish people, who run about in society are quite ready to expound to you exactly what he thinks, and what he has thought,—what he plans, and what he meditates. But sensible men rate such "information" at its value. They say: "The *data* for an exact knowledge of the plans of Louis Napoleon do not exist. We have not even any adequate means of knowing whether he has plans or not. All we know is this—'That he is a man of singular character, who has led a singular life; that it is impossible to fathom him; that those who are closest to him do not agree about him; that the world at large can only follow his actions from day to day, but cannot hope to foresee or predict them.'" The suddeness of his movements exemplifies this. One day he makes a rude speech to an ambassador at Paris which sends down the funds of Europe. Now, when we are taking the best means to provide against his aggressions, he writes a letter which breathes only amity to us and ours. During the Italian campaign his soldiers used to say, in allusion to the secrecy of his plans and the unexpectedness of his movements, "He makes war like a conspirator." He certainly also makes peace in that manner.

There is another peculiarity about the French Emperor which it is puzzling to treat respectfully. He is deficient in veracity. That virtue has never been a failing in his family. Strict judges have observed, that eminent as was the statesmanlike capacity and eminent as was the military genius of the first Napoleon, his mendacity was more eminent still.

The career of the present Emperor has shown a good deal of the same quality. We will not refer to his early life, because he was then placed in very difficult circumstances. But we cannot but remember that up to the day of the *coup d'état* to which he owes his power, he repudiated the idea of it; that up to the last moment he was lavish in his professions, that he continued to repeat that he would keep his oath to the Republic, long after he had a written plan for destroying the Republic in his desk. We cannot forget either,—for it is material when the Emperor has given us an account of his military resources,—that within a brief interval after we were told that France could not disarm, because she had not armed, an immense armament was sent across the Adriatic which was in a state of nearly complete preparation, and proved capable of winning some of the largest, most complicated, and most exhausting battles in the history of the world. We cannot forget,—for we are here referring to assertions made by the Emperor Napoleon to *ourselves*,—that he who made war for an idea, and was firmly resolved to accept no territorial acquisition, has at last absorbed Nice and Savoy, and long intrigued to acquire them. We must judge of the present from the past, and can but estimate the value of the Emperor's letter to Count Persigny by a reference to the curious incorrectness of former announcements made by him.

We think the letter of the Emperor leaves our knowledge of the real nature of his intentions exactly where it was before we received it. He has no substantial interest in quarrelling with this country. There is much easier plunder, if he wishes for plunder, to be obtained elsewhere. There are far better opportunities of gaining an easy fame; for an expedition to England must be very hazardous even if it should be successful; and if it should be unsuccessful, it must be such a failure as the world has rarely seen. By attacking England, it is true Louis Napoleon might gain a momentary popularity with the lowest class of the French people by stimulating their lowest passions. But he knows enough of the world to know that such a popularity will not last long—that it will not survive even the commencement of disaster—that it will be on his side only so long as he is successful and does not need it—that he will find it gone when he desires to lean upon it or to use it. We think as we thought before, that Louis Napoleon has no true interest in quarrelling with England—that it is his true interest to seek to be at peace with her. But we place no reliance on his letter or on his assertions.

If he had bad designs, but was not yet willing to begin to act on them—*if* he were willing to trouble us, but his time was not yet come—*if* he were waiting for better preparations, or a more plausible cause of quarrel than he now has, what what would be his course? He would have written this very letter to Count Persigny. He would wish to lull us into an unreal security. He would be ready to use every means for that purpose. He is a master of style. He knows the great value of calculated frankness. He can assume a studied negligence, and disguise a latent art. If we peruse the collection of his addresses, while President of the Republic, which he has himself published, we shall be well aware of his remarkable powers as a dissimulative speaker. Every form of dexterous art was used to deceive the National Assembly, and it deceived them. We do not say he is now deceiving us—we do not think that he is. We only say that *if* he wished to deceive us, he would use such language as he has. We say he would be peculiarly likely to use such language just when we are setting our house in order—just when we are preparing for defence. We say that on various occasions he has shown a rare capacity for effective falsehood, and that he must now bear the inevitable consequences—he must not expect his declarations to be readily or implicitly believed.

On the whole, therefore, we may conclude not with a new truth, but with a valuable one. We cannot tell what Louis Napoleon may do, but we should take care to be thoroughly prepared for anything he may do. What his plans may be, we do not know and cannot know: his future course is entirely hidden from us, and probably he himself foresees it but vaguely. But our own only is plain and simple. We may hope for the best, but we must provide for the worst. We must be safe whatever may happen. We must not neglect necessary precautions, because we fancy that we have fathomed "the unsearchable heart" of a foreign Monarch.

TAXATION IN FRANCE.

The public attention has, during the past six months, been so especially directed to the actual and relative amount of the taxation of this and other countries, that a succinct view of the fiscal system of our nearest neighbours may not be unacceptable to our readers. We will endeavour to lay before them in as clear and brief a shape as the subject will admit, the nature of the several imposts by which the revenue is raised in France, the amount yielded by each, and the mode in which they are severally levied. By this means we shall be able to arrive at some rough comparative estimate of the degree of pressure exercised on the population of that country and our own, both in reference to the sums raised and to the proceedings by which they are collected.

According to the provisional or prospective Budget, the total revenue of France for the year 1860 is estimated at 1,825 millions of francs, or 73,000,000*l* sterling. The several sources from which this sum was derived were as follows:—

	£
I. *Direct taxes* (land, house, personal, and *patentes*)	18,800,000
II. *Enregistrement* (stamps and domaines)	14,300,000
III. *Woods and forests and fisheries*	1,500,000
IV. *Customs* and tax on salt	9,100,000
V. *Contributions indirectes* (Excise, &c.)	19,500,000
VI. *Post Office*	2,300,000
VII. *Miscellaneous*	7,500,000

The English revenue for 1859, the last year for which the finance accounts have been issued, arranged as nearly as we can under the same heads, was as follows. In both cases we give round numbers:—

	£
I. Taxes, including income tax	10,000,000
II. Stamps	8,250,000
III. Crown lands	420,000
IV. Customs	24,380,000
V. Excise	18,500,000
VI. Post Office	3,200,000
VII. Miscellaneous	2,100,000
	66,850,000

The comparative public expenditure of the two countries was as follows:—

	France. £		England. £
For interest on the debt	22,400,000		28,500,000
Army and Navy	18,600,000		22,500,000
Civil list of the Crown	1,000,000		400,000
Cost of collecting the revenue	8,000,000		4,500,000
Other expenses	23,000,000		9,000,000
	73,000,000		65,000,000

The *Contributions directes* in France are four in number,—

1. *Contribution foncière*, or tax on real property.
2. *Contribution personnelle et mobilière*, a sort of income and house tax.
3. *Contribution des portes et fenêtres*, nearly answering to our old window tax.
4. *Contribution des Patentes*, a sort of licence or trade tax.

I. The *Contribution foncière* is levied on lands and buildings much after the manner of our poor rate. All real property is assessed approximatively according to its supposed average income,—a liberal deduction being made from the actual rental or full annual value, as among ourselves, where the assessment is rarely more than two-thirds of the rent. Rivers, canals, roads, public buildings, new plantations, and newly constructed houses, are exempt from charge for such time as the Government may direct. The *Contribution foncière* is considered to average nearly 8 per cent. of the net income, and in the Budget of this year is estimated to yield 280 millions of francs, or 11,200,000*l*.

II. The *Impôt personnel et mobilier* was originally intended as an income tax; but it was soon found impossible to estimate people's incomes with any approach to accuracy, and the attempt was abandoned. At present the tax is distributed by the communal authorities among the inhabitants, according to a scheme by which peasants and labourers are estimated to pay *three days' wages* annually, and other classes a certain per centage on the rental of the house they occupy. Towns and parishes, which have an *octroi* (or local tax on the entry of provisions and drinks), may, if they please, pay their contribution out of the produce of this *octroi*, so as to exempt their inhabitants from the annoyance of the *impôt personnel*. Some of the largest cities in the Empire avail themselves of this privilege. The total produce of this impost is about 70 millions of francs, or 2,800,000*l*.

III. *Portes et Fenêtres.* This is simply a window tax; houses having one, two, three, four, five, and six windows (or openings) and upwards, paying an annual sum which varies according to the population of the *commune*,—the more populous paying the higher rate. It is in fact, simply a second house tax, and yields this year 43 millions of francs, or 1,720,000*l.*

IV. *Patentes.* This tax, which yields about 3,000,000*l* sterling, is levied upon every one exercising any trade, industry, or profession. It is apportioned by the authorities according the nature of the occupation, and to the size of the premises on which it is carried on. The contributors are divided into four categories. The *first* consists of tradesmen and artisans, who again are minutely subdivided into classes and degrees, and pay sums varying from 2 francs to 300 francs per annum;—the *second* category includes bankers, *agens de change*, contractors, &c.;—the *third* comprises joint stock companies, insurance companies, great iron-founders, theatrical managers, &c.;—while the *fourth* includes the liberal professions. In each class there are numerous and somewhat arbitrary exemptions.

All these direct taxes are liable to be augmented at any time by what are termed the *centimes additionnels*—as were our Customs and assessed taxes some years since by Sir Francis Baring. Sometimes these additions are imposed for the general service of the State, sometimes for the special and temporary wants of different departments or communes. Thus a new assessment is paid for by a few additional centimes;—the assistance rendered necessary by extraordinary floods or hail-storms in particular districts, for improving the roads, or for building primary schools, &c., is provided in the same manner. It often happens that these additional centimes press very heavily upon the tax-payers:—in 1857, in the case of certain taxes, they added 66 per cent. to the original sum imposed.

We must reserve the description of the other taxes for our next number.

THE INTERNATIONAL STATISTICAL CONGRESS.

THE PRESENT POSITION OF STATISTICAL INQUIRY.

The meeting in London, under the Presidency of the Prince Consort, of the fourth session of the International Statistical Congress, has naturally directed a large amount of attention to a branch of inquiry not overlooked or undervalued by ourselves. The Congress itself is a fact and symptom of the present time in many ways remarkable. The basis of the Association is, that in every second year the several civilised States of the world should be officially invited by the Government of some one of them to send to its capital persons duly accredited and instructed, and supposed to be competent, to enter into discussions and conferences relating to the best methods of promoting statistical investigations throughout the whole range of subjects which fall within the province of legislation. Already on three former occasions—viz., at Brussels in 1853, at Paris in 1855, and at Vienna in 1857—meetings on this basis have been held,—have been attended by official delegates from a considerable number of countries, European and Transatlantic,—and have issued reports and documents which have commanded, by their scientific and practical character, a large amount of attention. The meeting which commenced in London on the 16th July, and continued on the five following days, was the fourth repetition of the experiment of a Congress, and we hear on all hands that at no former meeting has the attendance been larger, the proceedings more earnest, or the results more encouraging.

The organisation of these meetings is a task imposing great labour, no small expenditure of time, the co-operation of hundreds of intelligent men of all countries, and the outlay of no trifling sum of money. But this labour and cost has now been repeated for the fourth time, and will be repeated for the fifth in 1862 at Berlin. The Congress itself, therefore, is a hard fact, testifying by its vitality and success to the existence of some want so generally felt that even the official classes throughout Europe and America are willing to depart from their usual routine, in order to promote the search for some means of meeting that want.

In a few words, this want may be said to be the indication of nothing less than the necessity under which all Governments are rapidly finding themselves placed, of understanding as clearly and fully as possible the composition of the social forces which, so far, Governments have been assumed to control, but which now, most men agree, really control Governments. The world has got rid of a good many intermediate agencies, all of them supposed originally to be masters, where, in truth, they were even less than servants. The rain and the sun have long passed from under the administration of magicians and fortune-tellers; religion has mostly reduced its pontiffs and priests into simple ministers with very circumscribed functions; commerce has cast aside legislative protection as a reed of the rottenest fibre; and now, men are gradually finding out that all attempts at making or administering laws which do not rest upon an accurate view of the social circumstances of the case, are neither more nor less than imposture in one of its most gigantic and perilous forms.

Men are also finding out, as did the natural philosophers three hundred years ago, that, speaking in a large sense, our social and legislative philosophy is scarcely more than a bundle of general notions and propositions, unfortified by any adequate series of observations made by competent persons, recorded in a satisfactory manner, and analysed and digested by a rigid logic into scientific expressions fairly representing common results. The sense of this great void has during the last ten years become increasingly acute in this and in most other countries. The armoury of the ancient statecraft has been found to be almost as supremely effete as the cross-bows of the Crusaders. Crime is no longer to be repressed by mere severity,—Education is no longer within the control of the maxims which preceded printing,—Law is found to be a science perhaps the most difficult of any,—Justice means more than tricks and plausibilities of procedure;—Taxation, Commerce, Trade, Wages, Prices, Police, Competition, Possession of Land,—every topic from the greatest to the least which the old legislators dealt with according to a caprice as absolute as is exercised by the potter over his vessel,—have all been found to have laws of their own, complete and irrefragable. There is already abroad an idea, more or less distinct, of what has been called,—provisionally perhaps,—Social Science; and so popular is that idea, that in this country we have an Association, progressive and successful, which, by annual meetings in our large towns, seeks by a week of debates and conferences expressly to promote Social Science,—implying in this phrase whatever affects the material, moral, or mental condition of man in civilised society.

But the more intelligent cultivators of this new study are painfully sensible that, so far, they are mere dwellers upon the threshold of the temple they seek to enter and understand in all its parts. They are oppressed on all sides with suggestions and theories, and they find themselves assailed, even upon the most fundamental points, with hypotheses clearly unsound, but as clearly unrefutable by means of any positive doctrine resting upon ample scientific data.

The International Statistical Congress has set itself the task of procuring this scientific data; and in the present state of the world, no higher or more useful service could be undertaken for the furtherance of the best interests of the species.

Statistics in social philosophy hold the same place as experiments in natural philosophy. Observations of natural phenomena are among the earliest and most inevitable applications of the faculties of the human mind. But so long as these observations were capricious, irregular, imperfect, and obscure, they were of no more value in the construction of science than the loose traditions of a Tartar tribe. Men debated on the nature of motion and the composition of matter in the same abstract and general terms in which we at present discuss the effects to be produced by particular schemes of law, and the operation in actual practice of particular schemes of interference with the economical condition of a people. In the case of the ancient physical philosophy, the *a priori* view, abstract and general as it was, did undoubtedly contain some portion of the real truth. But, as a whole, that philosophy was no more than an ingenious mental diversion. For all practical purposes, it was worthless and deceptive. The outside analogies served very badly as guides to the modifications and cross influences by means of which nature adapts all general laws to her complex machinery. So it is at

present with social problems. Intelligent men see the phenomena from the outside,—they speculate upon the nature of the subtle forces which are at work beneath,—and, led forward by that passion for symmetrical system which has played so great and also so mischievous a part in the history of the human mind, they expand their notions into creeds and bodies of doctrine to be defended with all the fierceness of first discoveries.

It is certain, however, that if experiment in its highest scientific forms was needful to the building up of a Natural philosophy as solid as it is comprehensive, still more needful is experiment, assisted and guided by the best and latest lights, to the building up of a Social philosophy which, in its turn, shall rear its pinnacles to an elevation as high and from a platform as immoveable.

We will not say that hitherto statistics have been, as were the earliest physical observations, capricious, irregular, imperfect, and obscure. The exact contrary of such a statement would be no more than the bare truth in a large number of instances—as, for example, in the important field of vital statistics. But, regarded comprehensively, it is strictly true that we are only just beginning to comprehend the real nature, the proper limits, and the specific force of the labours of the philosophical statist.

In a sense very large and absolute, he is merely the intelligent ally of the cultivators of branches of knowledge in themselves complete. He can inform the student of Jurisprudence how many suitors have resorted to a particular court, or availed themselves of a particular statute; but it is beyond his province to discuss the origin or authority of the tribunal, or the policy or provisions of the enactment. Statistics in like manner are the allies of medicine, of police administrators, of sanitary authorities, and of a large class of kindred branches of inquiry. In these cases the office of the statistician is subordinate to the office of him who cultivates the larger science from which is derived the principles and scope of the inquiry. The jurist must classify his crimes and civil causes in accordance with enlightened rules of logic and equity, and the statist can do no more than fill up the schedules prescribed by this higher and special knowledge. But even here there is a limitation not to be overlooked. A cultivator of merely abstract studies is generally the worst and most incompetent observer of the practical operation even of those principles of which he understands the most; and it is here that the statist steps forward and tells him that unless his methods of observation be adjusted with a nice regard to the actual exigencies of the case—unless they avoid the trivial and set forth the vital bearings of the question—he must still submit to be deprived of all real aid from positive observations.

There is, therefore, within all the larger social sciences an inner and smaller science which takes charge of the duty of verifying or confuting by facts, collected, classified, and reduced into simple general results, the larger doctrines which arise from the *a priori* discussion of principles.

But beyond this auxiliary position, the statist has a department entirely his own. Throughout all civilised societies, as throughout all physical nature, there is a series of positive *units* which represent the numerical force or expression of every class of the phenomena to be dealt with. The mean temperature, for example, of this island is expressed by a given figure,—and so is the mean duration of human life. In like manner we may arrive at units more or less trustworthy as regards the mean annual number of crimes in this island of a given class,—of accidents of a given kind,—of the average amount of wages in a given trade,—of the average annual amount of exports per head of population,—and so on through a long catalogue. If a series of units of this character could be determined rigidly for each civilised State, we should have before us a chart of the social economy of the world almost as complete as the charts we already possess of its physical geography.

But between our present imperfect knowledge and the attainment of such an end, there stretches, now, a wide and untamed wilderness. But that wilderness will be traversed, and it will be traversed by a steady perseverance in the path of vigorous statistical inquiry which has marked the last ten years. Students in all countries are now agreed that the first step must be some method of uniform observation, and they are partly agreed as regards the principles of that uniformity. By-and-by will arise clearer notions of method, exacter views of the scope and aim of the objects to be pursued, and precise canons as regards the composition and force of averages, and numerical modes of statement. We shall advance from the less to the greater,—from the circumference towards the centre; and the generation which witnesses the termination of the task, will not be backward to reckon the completed labour among the noblest inheritances won by the patient sagacity of the human mind.

THE VALUE OF AN ANNUITY OF ONE POUND FOR THIRTY YEARS.

The present value of an annuity for 30 years, calculated so as to return an interest of 3½ per cent. per annum, and to reproduce the capital when it expires, is 18*l* 7s 10d for each 1*l* annuity; but the 1*l* will probably be subject to an income tax during the whole term, which it would be prudent to estimate at 1s in the £. This annuity of 1*l* is composed of two parts, the one being 13s, which is the interest on the 18*l* 7s 10d at 3½ per cent., the other being 7s, the sum required to be reinvested at compound interest of 3½ per cent. to reproduce the capital on the expiration of the annuity.

Now, both parts have the income tax to be deducted from them. The proportion of the tax on the 7s is equal to ·0175, or about 4d, and the present value of this ·0175 per annum must be deducted from the present value of the 1*l* per annum to show the true value that should be given to cover the loss by income tax; thus:—

	£	s.	d.
Present value of 1*l*	18	7	10
Less present value of ·0175	0	6	6
True value	18	1	4

If the second part of the 1*l* annuity, viz., the 7s or 6s 8d net, were reinvested in Consols, which at their present price do not pay 3½ per cent., the whole capital of 18*l* 1s 4d would not be reproduced at the end of the term; therefore, the more accurate figures at which to value the annuity would be 17*l* 18s 6d. It is probable therefore that, allowing for all contingencies and a fair margin for profit, the Government will not obtain more than 17*l* 10s or 17*l* 12s 6d for every 1*l* of annuity having thirty years to run.

JOINT STOCK BANKS.

The following is a statement of the nominal and paid-up capitals of the seven principal Joint Stock Banks of London, showing their indebtedness to the public, and, also, the amounts of their reserve funds:—

Name of Bank.	Capital Subscribed.	Amount Paid up.	Amount due by each Bank	Reserve Funds.
	£	£	£	£
Bank of London	600,000	300,000	1,594,631	20,000
City	600,000	300,000	2,341,434	33,000
Commercial	1,500,000	300,000	979,700	75,000
London Joint Stock	3,000,000	600,000	9,826,506	211,560
London and Westminster	5,000,000	1,000,000	11,919,571	200,000
London and County	1,000,000	500,000	5,366,127	110,000
Union of London	3,000,000	600,000	9,740,548	34,563
	14,700,000	3,600,000	41,768,517	684,123

THE EMPEROR NAPOLEON AND ENGLAND.

The following letter has been addressed by the Emperor Napoleon to the French Ambassador in this country:—

St Cloud, 25th July, 1860.

My dear Persigny,—Affairs appear to me to be so complicated—thanks to the mistrust excited everywhere since the war in Italy—that I write to you in the hope that a conversation, in perfect frankness, with Lord Palmerston will remedy the existing evil. Lord Palmerston knows me, and when I affirm a thing he will believe me. Well, you can tell him from me, in the most explicit manner, that since the peace of Villafranca I have had but one thought, one object—to inaugurate a new era of peace, and to live on the best terms with all my neighbours, and especially with England. I had renounced Savoy and Nice; the extraordinary additions to Piedmont alone caused me to resume the desire to see reunited to France provinces essentially French. But it will be objected, "You wish for peace, and you increase, immoderately, the military forces of France." I deny the fact in every sense. My army and my fleet have in them nothing of a threatening character. My steam navy is even far from being adequate to our requirements, and the number of steamers does not nearly equal that of sailing ships deemed necessary in the time of King Louis Philippe. I have 400,000 men under arms; but deduct

from this amount 60,000 in Algeria, 6,000 at Rome, 8,000 in China, 20,000 gendarmes, the sick, and the new conscripts, and you will see—what is the truth—that my regiments are of smaller effective strength than during the preceding reign. The only addition to the army list has been made by the creation of the Imperial Guard. Moreover, while wishing for peace, I desire also to organise the forces of the country on the best possible footing, for, if foreigners have only seen the bright side of the last war, I myself, close at hand, have witnessed the defects, and I wish to remedy them. Having said thus much, I have, since Villafranca, neither done, nor even thought, anything which could alarm any one. When Lavalette started for Constantinople, the instructions which I gave him were confined to this—"Use every effort to maintain the *status quo*; the interest of France is that Turkey should live as long as possible."

Now, then, occur the massacres in Syria, and it is asserted that I am very glad to find a new occasion of making a little war, or of playing a new part. Really, people give me credit for very little common sense. If I instantly proposed an expedition, it was because my feelings were those of the people which has put me at its head, and the intelligence from Syria transported me with indignation. My first thought, nevertheless, was to come to an understanding with England. What other interest than that of humanity could induce me to send troops into that country? Could it be that the possession of it would increase my strength? Can I conceal from myself that Algeria, notwithstanding its future advantages, is a source of weakness to France, which for 30 years has devoted to it the purest of its blood and its gold? I said it in 1852 at Bordeaux, and my opinion is still the same—I have great conquests to make, but only in France. Her interior organisation, her moral development, the increase of her resources, have still immense progress to make. There a field exists vast enough for my ambition and sufficient to satisfy it.

It was difficult for me to come to an understanding with England on the subject of Central Italy, because I was bound by the peace of Villafranca. As to Southern Italy, I am free from engagements, and I ask no better than a concert with England on this point, as on others; but, in Heaven's name, let the eminent men who are placed at the head of the English Government lay aside petty jealousies and unjust mistrusts.

Let us understand one another in good faith, like honest men as we are, and not like thieves who desire to cheat each other.

To sum up, this is my innermost thought. I desire that Italy should obtain peace, no matter how, but without foreign intervention, and that my troops should be able to quit Rome without compromising the security of the Pope. I could very much wish not to be obliged to undertake the Syrian expedition, and, in any case, not to undertake it alone; firstly, because it will be a great expense, and secondly, because I fear that this intervention may involve the Eastern question; but, on the other hand, I do not see how to resist public opinion in my country, which will never understand that we can leave unpunished, not only the massacre of Christians, but the burning of our consulates, the insult to our flag, and the pillage of the monasteries which were under our protection.

I have told you all I think, without disguising or omitting anything. Make what use you may think advisable of my letter.—Believe in my sincere friendship. NAPOLEON.

THE NEW TREATY WITH FRANCE.

ANNEXED is the report of the deputation appointed by the Dundee Chamber of Commerce to visit Paris, in order to represent the linen trade pending the discussion on the details of the new Treaty:—

To the Members of the Chamber of Commerce, Dundee.

Dundee, 27th July, 1860.

GENTLEMEN,—In connection with the French commercial treaty, and under the instructions conveyed to us by the public meeting held on June 27th, we, the undersigned, met in Paris on the evening of Wednesday the 4th July.

The leading features of the treaty are, 1st, that all duties, such as those on jute yarns, which at present vary from 100 to 150 per cent., and are thus entirely prohibitory, are reduced to a maximum of 30 per cent.

If manufacturers in this country can show to Mr Cobden and the French Supreme Council of State, that no trade could be carried on between England and France unless the duties to be imposed are fixed at five per cent. or at some other approximate rate, the information so given will be carefully considered, and will be compared with other and probably opposite information given by the French manufacturers, with a view of arriving at a correct state of the case as affecting linen or jute or other trades, and the duties will be fixed at rates to admit of trade and competition. By the treaty as it stands, the Emperor and his Government have voluntarily denuded themselves of the power of giving exclusive privileges to any other country; during the currency of the treaty England must share, and that to an equal extent, in any advantage conferred by France on any foreign nation.

The treaty proposes that the duties be levied on specific weight and fixed value, thereby not yielding to altered circumstances which time may bring about, or to changes in market values which are of constant occurrence; but the treaty contains a provision that in cases where pecific duties are inapplicable, simple *ad valorem* duties may be imposed. These leading provisions are stated here as proofs of sincerity on the part of the framers of the treaty, and partly because they may to some extent have been overlooked.

The object of our visit to Paris was to show that the effect of a duty of 30 per cent. on yarns or manufactures of linen and jute, would be as prohibitory as the 100 to 150 per cent. has hitherto been on jute yarns.

On Thursday, the 5th July, we had lengthened interviews with Mr Cobden, Mr Mattet, and Mr Ogilvy, from whom we obtained much valuable information, and it is unnecessary to add that we were received by all of them with great courtesy and kindness.

In the afternoon of the same day we drew up a paper in which we reviewed, as best we could, the position of the spinners and manufacturers in France and in this country, and showed, we hope conclusively, that they in France required no protection.

This document was read before the Council of State, and a copy of it was given to Mr Cobden and the gentlemen associated with him.

The ultimate decision as to the rates of duty will take place, we expect, in September or October of this year, and will be determined on by M. Thouvenel and M. Rouper as representing the French Government, and by Lord Cowley and Mr Cobden as representing the Government of England.

When those questions come to be considered, it will be the duty of the directors of the Chamber to appoint a delegate.

When in Paris, we had the opportunity of learning and, to some extent, of observing the incessant toil and mental anxiety Mr Cobden has to endure in carrying out the great work to which he has devoted his time, his great talents, and the influence of his name and position. If, as he confidently expects, he brings his labours to a successful conclusion, he will confer unspeakable benefits on the people, both of France and of England; even should he be less successful than he desires and aims at, he will nevertheless merit our gratitude and respect.

WILLIAM SMALL.
JAMES FAIRWEATHER.
WILLIAM COX.

PRICES AND WAGES.

RESOLUTIONS OF THE INTERNATIONAL STATISTICAL CONGRESS.

THE first subject referred to the Fourth Section of the Congress (the Section on Commercial Statistics) related to the Statistics of Prices and Wages, in the principal Trades; and the proceedings of the Section were based upon a Report or Programme of some length prepared by Mr Newmarch at the request of the Board of Trade Commissioners. This Report concluded by submitting to the Section a series of propositions for discussion. The propositions so submitted were debated at some length, and, after a few modifications, chiefly verbal, were finally adopted in the following form. The Programmes and Proceedings of the Congress will be embodied in a volume to be shortly issued by the Board of Trade.

The Resolutions are as follows:—

1. That by Wages be meant, throughout the whole inquiry, the money-payment to the labourer for a given exertion; that as far as possible it is desirable to ascertain also the Utility value of such money wages, i.e., the quantity and quality of the commodities obtainable by the labourer.

2. That the subject of Prices and Wages, as defined in the preceding proposition, may justly and advantageously be investigated under the two leading divisions of—

(*a*) Historical Period, extending from the year (say) 1400 to the year 1790; separating these 390 years into three sub-divisions, viz., (1) from the year 1400 to the year (say) 1570; (2) from the year 1570 to the year (say) 1,700; and (3) from the year 1700 to the year (say) 1790.

(*b*) Contemporaneous Period, commencing with the year 1790, as marking the commencement of the Revolutionary era, be divided into three periods, (1) 1790 to 1816, (2) 1817 to 1850, (3) 1850 to the present time.

3. That the leading object of the inquiries relating to the *first* sub-period, 1400-1570, should be the establishment, by ample and authentic data, of the two fundamental *Units* of (1) the average price of the Grain most commonly used for human food over as large an area as possible; and (2) the average Wages of the commoner kinds of agricultural labour over the same area.

4. That the leading object of the inquiries relating to the *second* sub-period, 1570-1700, and to the *third* sub-period, 1700-1790, should be the continuation of the same two fundamental lines of evidence, with the view of rendering as clear and certain as possible the positive data, by means of which we may estimate the effects produced on Prices and Wages by the influx of treasure from the New World in the sixteenth century.

5. That, connected with and collateral to these two fundamental lines of inquiry, it is desirable in all possible cases to collect authentic evidence illustrative of the prices of provisions, clothes, furniture, and luxuries, the prices of animals, the price of land and houses, the rate of interest, and the wages of artisan, professional, and artistic labour.

6. That, as regards the *Contemporaneous* Period, 1790, to the present time, the first object should be to continue the two fundamental lines of evidence as described in the second of these propositions, and to continue them in the most perfect form, and for the greatest number of countries.

7. That the second object to be sought as regards the Contemporaneous Period is (1) to seek to lay the establishment of an accurate historical view of the more important changes which have taken place in the prices of leading commodities and in the wages of various kinds of labour; and (2) to seek to lay the foundation, by means of facts, of accurate and comprehensive scientific views of the operation, at the same time, in different countries, of the economical principles which affect Prices and Wages.

8. That in order to arrive at accurate historical views of the more important changes (or fluctuations) which have taken place in the prices of Commodities since 1790, it will in nearly all cases be sufficient and de-

airable to limit the investigation to six or eight, or less, of the largest and most important articles under the heads of—

Indigenous articles of food.
— articles of raw material.
— animals.
Imported articles of food.
— articles of raw material.

9. That in connection with these records it is indispensable that as much accompanying information as possible should be given relative to the collateral classes of evidence referred to in Section VII. of the Programme.

10. That investigating by means of facts, the effect since 1790, of Prices or Wages, we may with most advantage specifically direct our inquiries in nearly all cases towards ascertaining the country and period in and at which the Common Labourer has been or is able to command, in the most marked degree—

(*a*) The highest and most advancing wages.
(*b*) The best and most improving shelter, food, and clothing.

11. That considering the discoveries of Gold, Silver, and *cinnabar* which have taken place in several parts of the world since 1848, it is especially desirable and important to ascertain, by means of accurate statistics of Prices and Wages, the commercial and economical effects which have been (and may be) produced by these discoveries.

12. That for the purposes of comparison between the precious metals and grain, a scientific expression of the average prices of the Grain most commonly used as human food must of necessity include the average annual results of a period of not less than 50 years.

13. That in order to construct a *datum line* of comparison from which to measure the changes which have taken place since the recent discoveries, it will, as a general rule, be sufficient to ascertain the figures which fairly represent the *average* results for each of the Ten Years 1841-1850, but excluding the prices of grain from this proposition.

14. That in carrying into effect the proposition just laid down (prop. 11), the details and methods described in Section X. of the preceding Programme may be adopted with advantage, subject to needful local modifications.

15. That in the countries which produce the new gold, it is desirable that Tables of Prices and Wages, on the principles pointed out in Section XI., should be constructed in Sydney (Australia), Melbourne (Australia), Adelaide (Australia), San Francisco (California), Victoria (Vancouver's Island), Tasmania.

16. That it is desirable that early measures should be taken for the construction, on the principles pointed out in section X., of Tables of Prices and Wages.

Hamburg,	Bordeaux,	New York,	Philadephia,
Paris,	Cadiz,	Boston,	New Orleans,

for each of the ten years 1841-50, and for each of the years since elapsed.

17. That a special representation be made from the Congress to the authorities of the colonies of New South Wales, Victoria, South Australia, Tasmania, West Australia, and New Zealand, pointing out the extreme desirableness and importance of an early compilation in those colonies, if possible official, of the Statistics of Prices and Wages pointed out in the proceedings of Section IV. of this Congress on Commercial Statistics.

That a similar representation be made to the authorities of New Columbia, and also a similar representation to the American Government as regards California.

18. That a communication be made to the Geographical and Statistical Society of New York, inviting its co-operation in giving effect to these resolutions; and that a similar communication be made to M. Michel Chevalier (Paris), M. Le Play (Paris), and M. Levasseur (Paris), writers already eminent in this class of subjects.

19. That as far as possible the results of the inquiries now recommended be reported to the next Session of the International Statistical Congress.

Agriculture.

THE ORIGIN OF SHORTHORN CATTLE.

ANCIENT AND MODERN MEAT SUPPLIES.

In tracing the progress of improvement in our breeds of meat-producing live stock, in connection with the supply and demand for meat, it is curious to observe the differences which have occurred in what may be called popular opinion on the subject. The improving breeder has ever been anxious for quality, symmetry, and early maturity in his stock. The ordinary farmer's opinion has ever tended towards a preference for large and perhaps coarse stock, while the consumers have rather leaned to the farmer's way of thinking. Certainly old and high-flavoured meat has ever been regarded with favour. Still the persevering efforts of breeders have so obviously improved the quality and increased the aggregate quantity of meat brought to market—though each animal may have been somewhat smaller, and some of that epicure-loved flavour of four-year-old mutton and five-year-old ox beef may have been lost—that farmers, graziers, and consumers have all found their account in supporting those efforts. Indeed so greatly has the consumption of meat increased during the present century, that the old methods of breeding and feeding stock could not have answered the public demand. Of late there has been a more than usually rapid increase in the consumption of meat, and we find many of the purveyors of the public, or those who record their views, objecting to some of the results of that early maturity in our best stock which has done so much towards feeding the people. Thus, in the monthly review of the cattle trade which appeared in the last *Mark Lane Express*, it is stated that "the great abundance of pasture herbage must be in favour of additional weight in beasts and sheep; *but the system of selling stock of premature age* must, we imagine, tend to prevent any positive increase in the actual supply of food for general consumption, which is now large beyond precedent." When a demand for meat arises somewhat suddenly, and prices are ruling very high, there will undoubtedly be efforts made by graziers to bring everything to market which they consider to be in a sufficiently forward state, but the system, as it is called, of selling stock "of premature age," is assuredly the only system which will best enable the demands of our consuming population to be supplied. Just test the matter by taking the produce of a single farm on the old and the modern plans. Under the old system, sheep bred would be kept till three or four years old, and oxen until four and five years of age, before they could be fattened for market. Under the new system, sheep of twenty months, and oxen from two to three years old, are brought to market far more "ripe" than the older stock was formerly brought; and if we compare the weight of meat produced on a given area—say a single farm—under the one system and the other, it will be found that the new system furnishes far more meat than the old. Possibly modern meat, from younger animals, may show a greater proportion of fat than the old stock formerly produced, and so an equal weight may not now go quite so far as formerly; but, making all possible allowances for such drawbacks, the benefits derived by the public from improved and early matured stock are great and numerous.

Indeed, the great extension and the high value of the Shorthorn breed of cattle, which offers the most conspicuous example of early maturity, sufficiently attest the general opinion of the agricultural and consuming public on this question, and there can be no doubt that present high prices of meat will have the effect of stimulating all breeders of cattle to proceed and continue in the same direction. More farmers will assuredly become stock-breeders. Hence the importance of impressing on the agricultural mind the true and sound principles of stock-breeding. And this is the more necessary, because there are many farmers not only anxious for improved stock of pure breeds, but finding that a cross between two pure breeds often produces offspring combining some of the merits of both parents, jump to the conclusion that they can perpetuate a race of animals retaining such combination. This is a mistake, and it is one which may go far to corrupt our pure breeds, should it be much more widely accepted. This danger is, however, more applicable to sheep than to cattle, though the success of Shorthorn and Scotch crosses for producing butcher's animals has unquestionably rendered many farmers who breed cattle less alive than they should be to purity of breed.

There are some myths, which have been imposed on the history of the Shorthorn breed of cattle, in reference to its origin, which have led to the notion that the Shorthorn itself is indebted to some of its high qualities to crossing. It has, though most erroneously, been called a composite animal. All evidence, actual and probable, and every reasonable inference from facts contradict this notion, and its unsound foundation has been again and again exposed. Yet we find it constantly reproduced and countenance afforded to it by persons who at the very same time state circumstances entirely inconsistent with such myths. The truth seems to be that men are fond of accounting for great successes by supposing the existence of empirical and extraordinary means to the attainment of such ends. The simple, though difficult operations,—the care, patience, and cost involved in perfecting a breed of animals by selection, are too prosaic for many persons; and, accordingly, we find that most of our early breeders are alleged to have employed foreign blood and occult practices in bringing their stock to the high state to which they brought it. This was said both of Bakewell and Charles Colling. As regards Colling, the story is that he used in his Shorthorn herd a cow which had a remote cross of the Galloway. Now, supposing it to have been true,—and it is anything but clearly made out,—the result would be that there was a blot in the pedigree of part of his herd, which experience has since shown to have been worn out, or to have proved innocuous, but to attribute any of the merits of the Shorthorns to a Galloway cross is perfectly absurd. Yet it is revived with additions by Mr Chrisp, in a lecture on Shorthorns he not long since read at the Newcastle Farmers' Club. Mr Chrisp said that, on inquiring with some minuteness into the history and origin of Shorthorns, he "found so much wanting to satisfy the inquirer into their early history, so many myths and mysteries in later days," that he determined to collect all he *knew*, in the expectation that other members would supply his deficiencies. He treats the account that the Shorthorn was derived from Holland, or that the breed was ever crossed with Dutch bulls, as wholly contradicted by the different characters of the two breeds. He refers to Professor Low's view that the Shorthorns were brought by the Saxons from the North of the Elbe, from Holstein and Jutland, as "more feasible," as the cattle of those countries "are similar both in colour and shape to the original Holderness breed." Be that as it may, it is certain that before Charles Colling began to improve the breed in 1780, the race was a well-established one in Yorkshire and Durham, on the banks of the Tees, and much esteemed by the landowners and farmers of those districts. The Aislaby family of Studley park, Sir Wm. St Quintin, Sir James Pennyman, Sir Hugh Smithson, Mr Millbank, Mr Hill, Mr Charge, Mr Maynard, and

others, were long before noted as "improvers" of the breed. The Collings, Charles and Robert, therefore, had ample opportunities for selection, of which they availed themselves with great spirit, and in no niggardly manner. Their plan was confessedly selection, accompanied, it is believed, with in-and-in breeding, which have been the means since adopted by the most eminent of their successors.

Really we here find a plain and intelligible origin of the Shorthorns. They were the native breed of a fertile district, whether introduced with the Saxons or subsequently, and their improvement had been an object of the great proprietors as well as the farmers of that district. They are wholly unlike any of the herds said to have contributed to their formation or improvement, and bear every internal evidence of a pure race in fixity of type, and the power of largely imparting their own characteristics to other breeds. Yet, with all this in his mind, Mr Chrisp, after telling the oft-repeated story of the "Alloy," allows himself to say: "It was also known that Colling, as well as others, tried the Highland cross, which, it is said, was given up as unsatisfactory. This I doubt, as I am at a loss otherwise to account for the fine thick mossy hair of the improved Shorthorn, as compared with the description given by George Culley, previously quoted. The misstatement, if any, may be attributed to the desire to keep close the secrets of the craft. Nor do I see any disparagement in the latter cross, where it has produced an excellency, any more than in the first-named with the Galloway which is avowed." But the Galloway cross, if really bad, was wholly washed out, while it is known that the only foundation of the myth as to a Highland cross was that C. Colling was accustomed to purchase some Highland cattle. The lecturer, however, finally concludes: "That the Teeswater Shorthorns are as distinct a breed of cattle as any other kind which are particularised by distinct names—in fact, they seem to have been so long in the country as to entitle them to be considered aboriginal. That there were excellent herds previous to the days of Messrs Colling." Yet with a strange inconsistency he adds: "That these enterprising and sagacious breeders, and several scarcely less noted contemporaries, by judicious crossing, improved the breed in quality and form, though perhaps they reduced the size of the animal." Now there is no evidence that the Shorthorns were ever crossed at all, and everything in the character of the breed indicates directly the contrary. What more could be required by a spirited improver, such as C. Colling, for reducing the size and improving the quality of the race than an "aboriginal" breed which had been so well cared for as to produce excellent herds? That he would hazard a cross is most improbable.

Literature.

TRAVELS, RESEARCHES, AND MISSIONARY LABOURS DURING AN EIGHTEEN YEARS' RESIDENCE IN EASTERN AFRICA. By the Rev. Dr J. LEWIS KRAPF. Trübner and Co., Paternoster row.

THIS, though a very different work from Dr Livingstone's Missionary Travels, yet owes its existence to their success, and is in some degree supplementary to them. Dr Krapf is not behind Dr Livingstone in devotion to the good work he has taken in hand, and is scarcely inferior to him in zeal for the advancement of geographical science; but in breadth and liberality of view, in scientific knowledge, in keenness of observation, and in the practical sagacity and strong common sense that makes every reflection and suggestion of the former writer of value, he is inferior. His book is comparatively deficient in human interest. The heathen are looked upon too much as mere raw material for conversion. The Wanikas and Wallambas of this volume do not stand out in individual reality as the Makalalas and Makalolos do in Livingstone's narrative. A more professional tone, if we may be allowed the expression, hangs about it, and will prevent it from being so widely read, beyond the circles more especially interested in missionary affairs, as its real merit deserves. Yet, both as an evidence of the courage and energy of the true missionary spirit, and as a fresh contribution to our very limited stock of knowledge as to the people and geography of Eastern Africa, it is well worthy of perusal. An eighteen years' personal experience of regions up to this time little known, excepting to Arab traders and Portuguese slave-dealers, is not of every day occurrence. It must have much to tell us that is curious and valuable; it can fill up here and there a vacant place upon our maps, and point out many an opening for commercial and friendly intercourse, which, if our boasted civilisation is not altogether delusive, must be far more beneficial in the end to the natives than to ourselves, although the increased impetus given to the slave trade by the arrival of the Portuguese, and "the evil influence which, as it was melancholy to notice, the trade with Europe, centred at Zanzibar, had begun to exert upon the people," have hitherto weighted the scales heavily upon the wrong side.

On the whole, we think that Dr Krapf was wise in yielding to a friendly emulation what he had withheld from the solicitations of friends. "Soon after my return from East Africa," he writes in his introductory preface, "I was urged by many of my friends to publish a connected account of my travels in that region; but it was not until I had prepared a brief sketch of Dr Livingstone's researches in South Africa that the idea of acceding to their wishes occurred to me, as, upon a review of Dr Livingstone's travels, I was led to believe that my own might form a useful supplementary volume upon the geography of Africa."

Dr Livingstone travelled from the South as far North as Lake Shirwa in the latitude of Mozambique. Dr Krapf reached almost the same point from the North; descending along the coast from Abyssinia to Cape Delgado. The principal seat, however, of his own and his fellow-workers Rebmann and Erhardt's labours was about Zanzibar; at first in the island of Mombaz, and finally at Rabbai Mpia, an inland village perched on so lofty and steep a hill, that the houses and cocoa grove in which they stood appeared to be straight above the heads of those climbing up from below; and the single ass upon which the fever-stricken missionaries rode by turns was totally unable to ascend. The fresh cool air of this mountain village, however, revived their failing strength, and from this resting point they were soon able to make excursions in all directions, with the double view of geographical discovery and religious teaching. They found the people in general friendly and hospitable, but troubling themselves very little with religious matters, being of the opinion of the Chinese that it was enough to do for this world to look after the food and the clothing, and that the future must take care of itself. It is Dr Krapf's opinion that they are far less intelligent and less desirous of instruction than the natives of the Western coast. They observe certain seasons of festivity partially religious in its nature,—one for the elder men, and one for the youths not yet versed in war. These latter have a decidedly uncomfortable way of remedying their deficiency in this respect. They go out singly into the woods during the days appropriated to their festival, where they lie in hiding until they each have slain some unwary passer-by, when they return with singing and dancing to their villages. At such times travelling from one village to another is attended with considerable danger. The women have their festival, resembling in many respects the rites of the Roman matron, sacred to the Bona Dea. The shouting, singing, and exultation of the villages at these times was a sore trial to their visitors. Often had Dr Krapf to have it "borne in upon him" that he must have more patience with the ignorant heathen, and seek to win them by love rather than by harsh reproofs. There is something touching in the thankful content with which the worthy missionary looks back upon the only direct and manifest result of six years' constant exertions; we give it in his own words:—"It is pleasant in drawing this volume to a close to be able to announce that the power and mercy of God have revealed themselves anew at Rabbai Mpia. The wife of Abbegunja, whom the reader may probably recollect, begins to pray, and he himself is diffusing Christianity among his countrymen." Two converts living and one deceased seem a poor result of so much anxious diligence; yet the experience of Chinese missions may teach us not to judge by immediate and apparent success, and one real step, the actual turning of one family from darkness to the love of God, is worth half a hundred of nominal conversions. We are not disposed to find fault with our author's faith or hope, but we think his charity is now and then a little too much in the background, as when we find him recording, in terms that at least look complacent, the burning of a town in Abyssinia where in former times he had been treacherously robbed and ill-used, "a crime now so signally visited upon its perpetrators." We may also hint that we do not altogether wonder at the savages asserting that he too carried charms, and grumbling that, while depriving them of their magic wands, duly prepared as safeguards on the journey against wild beasts and robbers, he retained himself the book to which, in this case not unnaturally, they attributed a similar power.

The frequent journeys which, as we have said, Dr Krapf and his colleague Rebmann took into the interior from their mission station at Rabbai Mpia, are given at length in a separate division of the book before us. They are full of interesting details and perilous adventure. It was on one of these that Mr Rebmann came upon the snow-topped mountain whose existence has been so warmly disputed. He shall himself describe the impression made upon him by the first view of this unexpected feature in a torrid landscape, within five degrees of the Equator:—

> There is great uniformity in the characteristic grandeur of this country; always repeating itself in great plains, then suddenly, again, high monotonous mountain-masses. In the midst of a great wilderness, full of wild beasts, such as rhinoceroses, buffaloes, and elephants, we slept beneath thorn-bushes quietly and securely under God's gracious protection! This morning we discerned the mountains of Jagga more distinctly than ever; and about ten o'clock I fancied I saw the summit of one of them covered with a dazzlingly white cloud. My guide called the white which I saw, merely "Bereidi," cold; it was perfectly clear to me, however, that it could be nothing else but snow.....We sat down for a while under the shadow of a large tree, where we had to wait for about an hour. I gazed on the lovely country, which seemed to be bursting with pleteoonness, and presented in a comparatively small extent the most striking contrasts. In our immediate vicinity was the beautiful river Gona; and on its banks, as well as on the foot of the mountains around, the richest vegetation of a perfect dark green of perpetual summer; and when I raised my eyes I beheld, apparently only a few leagues distant, but in reality from one to two days' journey, Kilimanjaro, covered with perpetual snow and ice.

It is the impression of the more distant tribes that the glittering whiteness of this mountain top is owing to the silver scattered over it. Those in the more immediate neighbourhood think that it is the work of evil spirits, who once, when the king of a certain tribe sent to collect the precious metal, destroyed the whole expedition with the exception of one man, who, returning with frozen hands and feet, announced to the king the melancholy fate of his companions.

Another geographical point upon which discussion has arisen from the reports of these missionaries, is the existence of a large inland lake—"a monster slug" of water—behind the elevated plateau that rises beyond the flat and sandy coast. All the inquiries and experiences of Dr Krapf go to bear out the theory of a fertile and depressed region, rich in water, extending over those inner places of Africa, which have till of late years been given up in popular imagination to arid deserts and tawny lions. A late expedition under the direction of the Royal Geographical Society, carried out by Major Burton and Captain Speke, has shown that not one lake, but three or more of unusual size lie between the Equator and sixteen degrees of Southern latitude, behind the coast line of Mozambique and Zanzibar. In or near the most Northerly of these, named by Captain Speke the Victoria Nyanza, it is thought that the sources of the Nile will be ultimately discovered.

Amongst other curious particulars collected by Dr Krapf about the various tribes inhabiting the interior of Africa, is one that might be rejected as fabulous, if it were not borne out in some degree by the testimony of Sir John Bowring to the existence of nearly similar beings,—men we can scarcely call them,—in the innermost forests of Luzon. "To the South of Kaffa and Susa," so Dr Krapf was informed, there is a very sultry and humid country with many bamboo woods, inhabited by the race called Dokos, who are no bigger than boys of ten years old; that is, only four feet high. They have a dark olive complexion, and live in a complete savage state, like the beasts; having neither houses, temples, nor holy trees, like the Gallas, yet possessing something like an idea of a higher being called Yer, to whom in moments of wretchedness and anxiety they pray,—not in an erect posture, but reversed with the head on the ground, and the feet supported against a tree or stone. In prayer they say—"Yer, if thou really exist, why dost thou allow us thus to be slain? We do not ask thee for food or clothing, for we live on serpents, mice, and ants. Thou hast made us, why dost thou permit us to be trodden under foot?" The Dokos have no chief, no laws, no weapons; they do not hunt, nor till the ground, but live solely on fruits, roots, mice, serpents, ants, honey, and the like, climbing trees and gathering the fruit like monkeys; and both sexes go completely naked. They have thick protruding lips, flat noses, and small eyes; the hair is not woolly, and is worn by the women over the shoulders. The nails on the hands and feet are allowed to grow like the talons of vultures, and are used in digging for ants, and in tearing to pieces the serpents which they devour raw, for they are unacquainted with fire.

The spine of the snake is the only ornament worn round the neck, but they pierce the ears with a sharp pointed piece of wood.....It cannot be decided whether these Dokos are the pigmies who, according to Herodotus, were discovered near a great river in the vicinity of Central Africa, by two youths despatched by Eteearch, King of the Oasis of Ammon; yet I can bear witness that I heard of these little people not only in Shoa but also in Ukambani, two degrees to the South, and in Barava, a degree and a half to the North of the Equator. In Barava a slave was shown to me who accorded completely with the description of Dilbo. He was four feet high, very thick set, dark complexioned and lively, and the people of the place assured me that he was of the pigmy race of the interior.

We have said nothing of the first division of Dr Krapf's residence in Africa, namely, that devoted to Abyssinia and Shoa, for the double reason that it does not possess in itself so much of the attraction of novelty, and that a more detailed account of this part of Dr Krapf's missionary labours was published some years since under the title of "Journals of the Rev. Messrs Isenberg and Krapf." We will only say that in all parts of the capacious volume before us the reader will find something to reward him for penetrating beneath a somewhat heavy and uninviting outside.

MAINSTONE'S HOUSEKEEPER. By ELIZA METEYARD ("SILVERPEN"). 3 Vols. Hurst and Blackett.

IT it some time since we read a story so happy in conception, so freely, vigorously, and delicately wrought out, as "Mainstone's Housekeeper." What we may call the main current of the story is the gradual emancipation of a shy, studious, hypochondriacal middle-aged country clergyman from the tyranny of his housekeeper, who mistakenly fancies she has possession of a secret affecting his character, while he, as mistakenly, fancies that the secret with the disclosure of which she threatens him is one affecting the happiness of people very dear to him, which he would preserve at any cost of suffering to himself. The idea has the threefold merit of being, as far as we aware, new; very well adapted for the groundwork of a novel; and yet quite consistent with the probabilities of life. The housekeeper just mentioned is not the one that gives a name to the story, *Clavus claro truditur*—housekeeper by housekeeper: the evil genius of the poor clergyman's household is driven from Mainstone Rectory by the appearance and gradual enthronement therein of one of the pleasantest and most sensible heroines we have recently met with. This is "Mainstone's Housekeeper;" she is a former pupil of the Rector's, and niece of an old friend of his, and voluntarily and without the Rector's knowing who she is, or knowing anything about her beyond that she is recommended by his old friend, she undertakes to subdue the evil influences of her old tutor's life and home. The disorder and wretched anxiety prevailing at the rectory before her arrival; her steady resistance to the mischievous insolence of the vulgar, coarse, and brutal woman who, by the aid of the Rector's morbid apprehensions, has immeshed him in her toils; the gradual substitution under her influence of external order and comfort, ending with the expulsion of the former housekeeper; and lastly, her investigation and final clearing up of the mystery and lifting of the burden of a life, constitute the central idea of the story;—although their enumeration gives a very inadequate notion of the plot, and leaves quite untouched (designedly) a great deal of incident and a great variety of character, which may possibly be more interesting to regular novel readers than the bold and original conception of this admirable story.

We had marked several passages describing, not incident or character—which would be unfair to those who have not yet read the book—but natural scenery; we shall extract only one, as the shortest, not the best, remarking, however, that Miss Meteyard is not occasionally, but habitually happy in her descriptions of external nature, and has an observant and loving eye for its infinitely varied aspects. Slight as it is, there is both skill and breadth of treatment in this little sketch:—

She did not, however, stay to speak, but keeping more in the shadows of the churchyard, she took her way by its gate into an adjacent lane which descended slowly through some woodland towards the canal. The lane crossed a brook which ran picturesquely through the woodland, and then went upwards toward the canal bridge. From this could be seen the canal itself; on one side of the bridge winding through sloping fields, green with waving corn; on the other side raised on a huge embankment above the level of a vast morass, of which a small portion here and there had been reclaimed. Yet solitary and wide extending as this was, it was not without a solemn and peculiar beauty. Dreary and unseen by few—except by bargemen as they travelled by—still upon these flags rested, as everywhere upon God's earth, the sign and glory of His work. The flags in their green wilderness bent multitudinously in obedience to the wind—a million water-lilies floated where no hand might ever gather them—yet where the incense of their perfume wandered far away—the rush and wild mint made the hillocks of the level green, and not the shadow of a desolation lingered even in the reediest swamp.

The reader is inclined to be a little irritated in the first volume by the slow progress of the story,—the long time which elapses before the Rector even sees, the longer time before he recognises, his new housekeeper; on second thoughts, or rather as he becomes better acquainted with the nature of the difficulty and the characters of those involved in it, especially of the Rector himself, he will perceive that this delay, this intractable and almost insuperable strength of the visionary obstacles and imaginary embarrassments of an unpractical and morbid mind, is strikingly and deeply true to nature. Another merit of the book, in our opinion, is the completeness, and, so to speak, exclusiveness of the horizon which shuts in the little world to which we are admitted. There is no unreality or ignorant abstractness either in the characters or the story, and yet there is none of that dragging in of the crudest elements of present, actual, historical life, so disagreeable in much of the "realist" fiction of the present day. In this respect, "Mainstone's Housekeeper" resembles "Adam Bede." We have pointed out a few of the merits of this very good story. Those who know "Silverpen's" writings will not require to be told that its tone is pure, genial, and womanly, and its views of life both sound and wise.

THE QUEENS OF SOCIETY. By GRACE and PHILIP WHARTON. James Hogg and Sons.

WHEN we first opened this book we thought to find in it, in spite of a somewhat doubtful title, another contribution towards the right appreciation of woman, by one of those earnest and intelligent writers who have devoted themselves of late her "merits to disclose;" but a few minutes' perusal convinced us that it owes its origin to no enthusiastic idea; to no desire of improving mankind; to no motive higher than a monetary one,—the hope of seizing upon a subject temporally "up" in the market, and drawing attention by a series of names highly suggestive of scandal.

We have seldom met with a more decided case of book-making, or with a book that reflects less credit upon its makers. It shows, indeed, a degree of diligence in the search after authorities that would be laudable, if it were not used chiefly with the aim of raking up as many half-forgotten or well-known anecdotes of a dubious kind as possible,—anecdotes which, when collected, the writers have not wit enough to put into an amusing shape. The lives are most superficially told. Facts even are at times in fault, as where Augusta, the wife of Colonel Leigh, is called the aunt of Byron. The value of the opinions contained in them may be judged of from a few examples.

Napoleon's return from Elba is said to be "certainly the most comic incident in the history of the last century." Probably Waterloo is only a few shades less *comic!* Byron is asserted to

have "behaved nobly" in his offer of reconciliation to his wife at Madame de Staël's entreating,—too confident a judgment, considering how little is clearly known of the facts of the case. Madame de Maintenon's power over Louis is accounted for by the fact that she was the eldest. "She was two years his senior, and could, therefore, control him." The strength of that therefore is irresistible. The writing is poor where it is not positively bad. The whole thing would be beneath serious notice, if the rapid increase of this class of books did not make it necessary to protest against their showy worthlessness.

THE CORNHILL MAGAZINE for August.
MACMILLAN'S MAGAZINE for August.

MR TROLLOPE'S tale is continued in this number of the "Cornhill Magazine" with great art and admirable spirit. Nothing can be more skilfully drawn than the half-satirical account of the ministerial crisis; and Mrs Harold Smith's offer to Miss Dunstable on behalf of her brother, Mr Sowerby, is full of point and wit. The lecture on George II. is printed in this number;—it is not one of Mr Thackeray's most effective pieces, but still lively enough. The article "Stranger than Fiction" is an account of the very marvellous material phenomena which are falsely termed spiritual. A mild young man, for some time out of his teens, is thrown on his back by the spirits, and floated about the room—he availing himself of the admirable opportunity thus afforded him to scribble on the ceiling. If these phenomena are spiritual, what are to be called material? There is rather a poor "Roundabout Paper" by Mr Thackeray, in rejoinder to some criticisms in a New York paper and the *Saturday Review*.

"Macmillan's Magazine" contains a very spirited continuation of Mr Hughes' tale "Tom Brown at Oxford." The account of the degree and honours examination is given with great spirit, and the chapter on the Commemoration is exceedingly lively. There is also an interesting eulogium by Mr Maurice on Mr Froude's "History of the Tudors," which, though to a certain extent just, appears to us to represent Mr Froude's view of Henry VIII. as less full of individual crotchet and more founded upon fact than it really is. Mr Sydney Dobell's poem addressed to the followers of Garibaldi has some lines of genuine poetry, with a sadly incommensurate alloy of weak mysticism.

A HISTORY OF EDUCATION FOR THE ENGLISH BAR; with Suggestions as to Subjects and Methods of Study. By PHILIP ANSTIE SMITH, M.A., Camb., LL.B., Lond., of the Inner Temple, Barrister-at-Law. London: Butterworths. 1860.

MR SMITH has produced an interesting little volume upon the important subject he has taken in hand, and has brought to bear upon it the opinions of many of the most eminent of English lawyers. The book divides itself into two parts, the one treating of the history of legal education in this country, the other suggesting courses of study, and discussing the recent changes effected by the establishment in the Inns of Court of lectureships and examinations.

The historical part contains many interesting notices of the ancient schools of law and their readers, and mootmen and students and quaint arrangements about dress and mode of life. Mr Smith's account of this subject is, so far as we know, the most consecutive and full that has yet been produced, and it deserves the attention of the antiquarian.

The author is an advocate for teaching law by means of lectures, and commencing with the study of its principles rather than its practice. We admit that law lectures may be good (almost anything is good to a man who is determined to learn); but we confess to estimating more highly than Mr Smith the value of the present method of learning law in the chambers of a barrister. Law is only applied morals; to know morals and to know the limits within which morality can be enforced, is to know the principles of law. They are, therefore, in every man's breast; and the only difficulty is in the application. Now to see law in its practice is to see that application; and every young man who pores over a heap of papers in a pupil room, and thinks at all about his work, is learning that application, seeing the difficulties which prevent the enforcement by courts of the whole moral code, seeing the force and value of the rules of evidence, and, in a word, developing the principles of jurisprudence out of himself. It is all in him, and it only wants the man midwife of whom Socrates used to talk to give it birth; and we confess that, in our opinion, that is better effected in the pupil room, than by studying in the abstract, by lecture or otherwise, the results of this application embodied in the rules of jurisprudence. These results in their nature and in the order of thought come after and not before practical attempts at law; and we doubt whether anything is gained by attempting to teach them in the opposite order.

THE ILLUSTRATED BOY'S OWN TREASURY of Science, Drawing, Painting, Constructive Wonders, Rural Affairs, Wild and Domesticated Animals, and Outdoor and Indoor Pastimes. Embellished with 500 Engravings. Ward and Lock. 1860.

THIS is a charming book. The information is varied, and usually well-told, and ranges over those subjects most likely to interest boys. The sections on Science and Practical Arts contain explanations of photography, the stereoscope, the electric and submarine telegraphs, &c., and elaborate instructions for young students in drawing and painting, the whole being interspersed with explanatory diagrams. The more romantic sections are full of beautiful wood-cuts of scenery and animals: that of Alexander Selkirk among his dancing goats (p. 290) is particularly good. Perhaps the two last sections, on outdoor sports and indoor pastimes, will be as popular as any portion of this book, which is certain to recommend itself to all boys into whose hands it may fall.

THE FIRST SHOT AT WIMBLEDON. London: Tegg. 1860.

A LARGE lithograph, somewhat in the style of the commemorative representations in the *Illustrated London News*, representing the Queen in her tent, firing the signal shot at Wimbledon.

NEW MUSIC.

1. SCOTLAND'S LOVE. The Words and Melody by William Bridges, the Symphonies and Accompaniments by T. Brown. —2. THE STAR OF THE WEST. The Words and Music by J. W. Cherry. Emery and Co., 408 Oxford street.
3. WHAT'S A' THE STEER, KIMMER? and HUNTINGTOWER.—4. GARIBALDI WALTZ for the Pianoforte. Composed by E. Reyloff. Nos. 782 and 1133-4 of the "Musical Treasury." Published by the Music Publishing Company (Limited), 19 St Peter's hill, St Paul's, E.C.

1. THIS song (adorned with a portrait of Burns) is written for a contralto or bass voice. The melody is pretty, and might be made effective by a good singer. 2. The "Star of the West" is worthless in every respect. 3. This is a neat edition of two old Scotch ballads, printed on one sheet. 4. The "Garibaldi Waltz" is graceful, well harmonised, and easy, though not very original.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

The evidence taken before the Superior Council of Commerce on the subject of the treaty with England is really of very great interest. Given by practical business men both of England and France, it throws light on the position of the principal trades of the two countries which has never been cast before. Unfortunately it is far too voluminous to be analysed in the limited space of a journal; but let us hope that it will be published in France and translated into English. In previous letters I have noticed some of the principal facts set forth in it; and here are a few more culled from the reports of the sittings of the 21st, 22nd, 25th, and 28th June, which are the last that have been put into type:—French machines for spinning are dearer than those of England,—and the reason, according to M. Kœchlin, of Mulhouse, is, that the raw material, the fuel, carriage, lighting, models, tools, interest on capital, &c., are all higher in France, whilst the demand for machinery is less regular, and not large enough to justify the construction of vast establishments. On the whole, M. Kœchlin calculates that such machinery in France costs 310f a ton more to make than in England; and he and his fellows consequently ask for protection of 25 or 30 per cent., declaring that "with less, competition would be difficult if not impossible." But though below England in this description of machinery, it is admitted that, in the manufacture of locomotives, France has made such extraordinary progress that she can do without any protection on them, and that in fact she exports to Spain and Italy in competition with English makers. In the production of carding machines France is being defeated by the English; at Lille, for example, out of five manufactories, not fewer than four have been shut up. The builders of engines for steamers ask for 20 or 25 per cent., but would prefer a duty imposed by weight instead of value. Though, however, demanding this protection, one of them, representative of the Forges et Chantiers de la Mediterranean, a great engine-building company, declared that French steam engines for vessels are quite as good as English, and that considerable quantities of them are exported to Sardinia, Egypt, Rome, Naples, and Russia. As a specimen of what France can do in the building of steam vessels, it was stated that that company, in the space of three months, built 20 gun-boats, of 20 horse-power each, for China; and that in the course of a year all France can turn out engines of 30,000 horse-power, which would be sufficient for 40 vessels. It was alleged, as an argument for protection, that, whereas in England a screw-engine of 100 horse-power can be constructed for 100,000f, one in France costs 120,000f. It was stated incidentally, that of

late builders at Glasgow and Newcastle have begun constructing an inferior description of engines,—"for sale rather than for use." Touching agricultural machines, it was stated that it was the display in the Exhibition of 1856 of those used in England which first made French agriculturists understand their immense utility; and that since then considerable imports from England have been effected. But loud complaints were made that the Customs laws and regulations are so absurdly contrived as to throw on such objects an enormous amount of import duty. As examples, it was stated that a Crosskill roller costing 600f, has paid 400f duty; that a boiler for cooking vegetables which cost 28f in Germany, actually paid 147f to the Customs!—also that a Belgian manufacturer of agricultural implements had positively refused to execute an important order, because the "silly Custom-house regulations of France" on such things occasioned endless trouble and expense. A large importer of English agricultural machines (a Frenchman) expressed the opinion that 10 per cent. *ad valorem*, or 10f or 12f the 100 kilogs, would be ample protection for French makers; and, in proof of it, he stated that hay-making machines on Nicholson's plan can be manufactured in France for 500f, though they cost 575f in England. But Count de Kergorlay, a great authority on such matters, declared that in order to bring machines into general use in French agriculture, the free import of all foreign ones ought to be allowed—at all events, for many years to come. After exhausting the inquiry respecting machinery, the Council returned to the iron question; and the well-known M. Talabot once more entered into elaborate arguments to prove that, without high protection, the French iron trade cannot live. M. Flachat, a very distinguished railway engineer, who was examined on the same matter, showed that ironmasters are subjected to certain grievances under the mining and forest laws, and also as regards the construction of tramroads to their establishments; the practical consequence of those grievances being to make their iron dearer than it otherwise would be. There can be no objection to granting the ironmasters redress on these points; but assuredly they do not afford any justification for protecting those persons by high import duties, and so impose a heavy tax on the general public. In connection with the iron question, two French engineers, sent specially into England to make inquiries respecting the cost of production, gave much valuable evidence. They, I perceive, bore testimony to the fact that the proprietors of several large ironworks in England not only answered all questions, but offered their books for inspection.

The recent sittings of the Council have been directed to the cloth and cotton manufactures.

An Imperial decree effects a great improvement in Algeria; it does away with the system of the concession of land exclusively by the Government, and directs that sales at fixed prices or by auction shall be made. It, however (probably for no other reason than that love of meddling which is the besetting sin of French *bureaucrotie*), enacts that exchanges shall not be effected without the sanction of the authorities.

The Bill on the Budget of 1861, adopted by the Legislative Body, has been sanctioned by the Emperor and promulgated as law. As already stated, the amount of expenses, "ordinary and extraordinary," is fixed at 1,840,121,858f, of which, however, 595,011,438f figure as what the French call "expenses of order," that is which are balanced by corresponding entries on the side of receipts, and are only introduced for the sake of regularity in accounts. But French Budgets, it must be remembered, are always considerably modified by decrees for "unforeseen and extraordinary expenses" issued as occasion may require. The receipts, ordinary and extraordinary, are put down at 1,840,775,670f, —a surplus of 653,812f. The law enacts that the Treasury bills in circulation shall never exceed 250,000,000f; but—mark the exception—"in case that sum should be insufficient for the wants of the service, provision shall be made by means *of supplementary issues* to be authorised by Imperial decrees"—in plain English, if the Government thinks fit, the issue may be unlimited. The Bill enacts that the bonds delivered to the Caisse d'Amortissement, deposited as a guarantee in the Bank of France, and those lodged in the same way in the Discount Banks, shall be included in the said sum of 250,000,000f.

The Chamber of Commerce of Nimes lately wrote to the Minister of Commerce to say that the delays fixed for bringing into operation certain of the intended modifications in the tariffs would be prejudicial rather than advantageous to commerce, and the Minister has answered that if traders generally were to demand a reduction of the time allowed, the Government would willingly accord it, but that thus far the prayers for it have not been numerous.

It was lately stated that the weavers of several departments, and among them of the Aisne, had petitioned the Government to allow English cotton yarn to be introduced into France at once, at a moderate fixed duty, instead of waiting to next year as fixed by the treaty. Some of the newspapers of the Aisne, inspired doubtless by cotton-spinners, represented that this petition was of little value, inasmuch as it did not represent the opinions of the majority of the weavers of the department. To this allegation a triumphant answer has been given:—namely, that the petition was signed by *four-fifths* of the manufacturers interested in obtaining English yarn.

The Directors of the Caisse Generale des Chemins de Fer,—a speculating company got up by the well-known M. Mires,—announce to-day that they are making active arrangements for reducing the capital from 50,000,000f to 20,000,000f, and for reimbursing the shareholders the difference out of securities of different kinds held by the Caisse. One of the *gerants* of this Company, M. Solar, lately withdrew from it, and no surprise would be felt if M. Mires were to do the same.

The publication of political pamphlets is continuing, and they create uneasiness. One entitled *La Syrie et l'Alliance Russe*, recommends an alliance between France and Russia for the purpose of demolishing Turkey and enabling France to take the Rhenish provinces and Belgium. Another, entitled *La Liberte et la Nationalité*, by M. J. E. Horn, is a new exposure of the tyranny and injustice practised by the Austrian Government in Hungary, and it declares, without any sort of ambiguity, that a revolt of the latter country is near at hand. It is ably and eloquently written.

The Bourse has not been active during the week. Yesterday the Emperor's letter produced a good effect, but to-day there has been a fall. In definitive, the week's quotations stand as follow:—

	Thursday, July 26.		Thursday, Aug. 2.

The following is an account of the markets:—

FLOUR.—At *Paris*, this week, prices have undergone some oscillations, owing to the state of the weather, but on the whole the market has not been active. Yesterday the quotations were 60f to 64f the sack of 159 kilogs; four marks, for the present month, 60f 25c to 60f 50c; September alone, 61f 50c; September and October, 62f.

WHEAT.—At *Paris*, yesterday, little was done, and quotations were 34f to 38f the sack of 120 kilogs,—a fall on last week's prices. Some new wheat from the neighbourhood of Montauban was offered at 38f 50c, but not taken. Of the provincial markets, 71 present a rise of from 8c to 2f the hectolitre, 35 a fall of from 13c to 1f 25c, and 42 have had no variation.

COTTON.—The sales at *Havre*, in the week ending Friday, were 5,057 bales, and the arrivals 4,054. The brokers fixed the closing prices considerably below those of the preceding week, namely, 4f the 50 kilogs the very low, 2f to 3f the low, 1f to 2f the very ordinary, and 1f other sorts. Low New Orleans was consequently 83f, and very ordinary ditto 93f. This week, business has not been active, and prices have fallen and become very irregular. Yesterday, low New Orleans was 80f to 82f.

COFFEE.—At *Havre*, in the week ending Friday, business was not active. 350 sacks Hayti Gonaives, disposable, went at 81f 50c the 50 kilogs in bond; 500 ditto for delivery at the same price; 1,680 Rio not washed, disposable, 72f 50c to 75f 50c; 2,200 sacks ditto for delivery, 73f to 75f; 86 sacks Malabar, 107f 50c duty paid; 100 sacks Singapore, 108f. The arrivals were 2,500 sacks Brazil (Santos), and some small quantities from Rotterdam and England. This week, business has been unimportant. Hayti Gonsives at 82f 50c; Rio, not washed, at 73f to 75f. Some lots of damaged have also been sold. At *Bordeaux*, last week, the sole sales were 280 sacks Costa Rica for delivery, 113f; a small lot of Santiago, disposable, 100f; and 50 sacks Guayra at established rates. This week, some small lots of Costa Rica have been taken at 113f and 113f 50c. At *Nantes*, last week, the only transaction was recorded in last ECONOMIST, and this week nothing has been done.

SUGAR.—In the week ending Friday, at *Havre*, French West India obtained an advance: 760 casks Martinique and Guadaloupe went at 48f to 48f 50c; 47 ditto at 47f 50c; 1,010 ditto for delivery, 48f 75c to 49; a smaller lot of ditto, 50f; 280 casks ditto "usine," 50f, and 150f ditto for delivery same price; 250 casks Havana, 36f the 50 kilogs in bond. The arrivals were nearly 1,000 casks French West India, and a small lot of another sort from Dunkirk. This week, there have been numerous sales: French West India, 49f; Havana, 36f 50c to 37f 50c; Mauritius, 58f. At *Nantes*, last week, sales were extraordinarily large—33,155 sacks and some small quantities in casks. The greater part consisted of Reunion at 51f 25c to 55f 62c; Mauritius, 53f; Mayotte, 47f to 50f 50c; French West India, 42f to (for usine) 50f 50c, and some Java at prices given last week. This week, there have been several transactions: French West India, 49f; Reunion, 51f 50c; Mayotte, 47f. At *Bordeaux*, last week, between 250 and 300 casks French West India went at 47f 25c to 51f 25c; 1,345 bales Reunion at prices kept secret. This week, there have been large sales: French West India at 48f 75c to 49f; Mauritius at prices kept secret; Reunion, 54f; Havana, at prices not stated.

INDIGO.—At *Havre*, in the week ending Friday, there was a certain degree of activity, as many as 86 cases of Bengal, forming part of a newly

arrived cargo, having been sold, part at 9f 25c to 10f 90c the half-kilogramme duty paid, part at prices kept secret. The prices were on an average 35c to 45c above the estimates. The arrivals were 21 cases from England. This week, there have been several sales, but the prices are not given. At *Bordeaux*, last week, 29 cases Bengal went at previous quotations. This week, 20 cases Bengal have been sold: prices not stated.

HIDES.—At *Havre*, in the week ending Friday, a fair amount of business was done: 861 Buenos Ayres dry, at 140f the 50 kilogs duty paid; 700 Monte Video salted, 82f 50c; 4,000 Uruguay salted, 80f; 1,380 Rio Grande dry, 130f to 135f; 1,500 Pernambuco drysalted, 97f 50c; 500 Tampico dry, 107f 50c; 317 Lima dry, 110f; 300 New York salted, 53f; 1,750 Ireland salted, 48f; 460 horse La Plata dry, 10f each; 669 ditto salted, 100f the 100 kilogs. The arrivals were about 5,000. This week, sales have not been extensive: Rio Grande dry, 125f duty paid; Uruguay, 80f; Monte Video dry, 145f.

WOOL.—The demand at *Havre*, in the week ending Friday, was regular: 75 bales La Plata unwashed, at 2f 17½c to 2f 85c the kilog; 29 bales Monte Video from England, 2f 95c; and 86 bales sheepskin Buenos Ayres unwashed, 80c to 1f 20c. The arrivals were nearly 2,000 bales. This week, Buenos Ayres unwashed has been 222f 50c to 226f 50c the 100 kilogs.

TALLOW.—At *Havre*, last week, there were no sales, and only 12 casks arrived. Nothing has been done this week. At *Paris*, yesterday, the 100 kilogs were 143f 25c, a rise on last week's quotations.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg., first quality, was 96f to 97f the hectolitre; Montpellier of 86 deg., 130f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 130f; beetroot, first quality, 102f.

Correspondence.

ANTERIOR DEBTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In order to provide money for the discharge of anterior debts, the authorised agent and local manager of a joint stock company draws upon the company a (90 days') bill of exchange for 5,000*l*, payable to the cashier of the company's local bank. The said bill is expressly sanctioned by the Board of Directors of the Company, and is accepted by the Secretary as the officer of the company.

The said local bank, in consideration for this bill, advances to the said local manager of the company the 5,000*l* required to meet the company's anterior engagements.

In this state of things, the Chairman of the company assures the shareholders (as a matter for great congratulation) that the company *has never borrowed a shilling from its bankers.*

Some of the shareholders, on discovering the facts, dispute the accuracy of the Chairman's statement; and contend that from the moment the local bank, on the security of the said bill, advanced the 5,000*l* (required to meet the engagements of the company) to its local manager, the company had actually borrowed 5,000*l* from its bankers, although the bill was not actually matured, and had incurred an actual, though a deferred, debt to its bankers.

The ECONOMIST's opinion on the question may possibly save litigation and heavy costs, as it is impossible that any opinion expressed by the ECONOMIST should not carry great weight on any financial or mercantile question.

You will greatly oblige myself and others if you will insert this letter, together with some reply to the mercantile question which it raises, in the next number of your valuable paper; and believe me, Sir, your constant reader, CARDUUS.

Couladon Grange, Surrey, July 21, 1860.

[We apprehend there is little doubt in this case if the facts stated in the above letter be correct. There can be no doubt that a person who discounts a bill, borrows money; and a company which discounts, as in this case, its own acceptance, still more certainly does so. We should have thought that the accounts of the company would show the way in which the money had been raised; unless there were some entry of the liability, the company would appear to be 5,000*l* richer than it really was. There was certainly no present debt which the bankers could recover from the company, as they could not commence an action while the bill was running, and so much as this the Chairman would have been justified in stating; but if he went further, he must have made an error.—ED. ECON.]

PAPER DUTIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Since the advocates of "protection to native manufactures" seem to assume, in support of their claim, a certain scarcity and high price of rags in this, as compared with other countries, permit me to adduce a few facts which are hardly consistent with the truth of that assumption.

The rag-refuse of those Mediterranean countries which have no paper manufactories (including all the shores of the Levant) is collected chiefly at the port of Leghorn, which is therefore an important depot for the article, and it is thence distributed to such countries as require to be supplied.

The quantity so distributed averages annually 250,000 cwts, of which a part comes to England, but by no means the largest part, as would be the case if the price here were higher than elsewhere. By far the largest portion (nearly 5-7ths of the whole quantity) goes to America. Of the remainder, Spain takes quite as much as England (nearly 40,000 cwts); and it is a curious fact that France, too, figures as a customer, which, though the quantity she takes be small, is sufficient to prove that she cannot command so abundant and cheap a supply at home as is commonly asserted.

I believe the import of rags into France has, in some years, amounted to 2,000,000 kilogrammes; and I may remark that the French Government imposes a small import duty upon them.—I am, Sir, your obedient servant, A LEVANT MERCHANT

Baltic Coffee House, August 1, 1860.

COMMERCIAL AND MISCELLANEOUS NEWS.

The following detail, showing the total estimated cost of the several new works proposed to be executed, the sum proposed to be taken for each station for the period between the 1st of August, 1860, and the 1st of August, 1861, and also the extra sum, not provided for in Annual Estimates, required for the same period for works already sanctioned by Parliament, has been published:—

District.	Proposed New Work.	Total Estimated Cost, including Purchase of Land.		Proposed to be taken for Period between August 1, 1860, and August 1, 1861.

War Office, July 26. SIDNEY HERBERT.

A letter from Lisbon says that important reductions are about to take place in the Portuguese tariff. The measure submitted to the Legislature proposes that all silk, linen, cotton, and wool, whether in the raw state or manufactured—all leather, and various articles made from it—all glass, crystals, earthenware, chemicals, and medicines—all tin, copper, iron, steel, gold, silver, brass, and platinum, manufactured or otherwise—gigs, carriages, books, paper, paintings, and engravings—many farinaceous articles—all fermented liquors, gin and liqueurs—and all gelatine and fatty substances, with a host of other articles of various descriptions be admitted into Portugal at rates of duty 20, 25, 30, 40, 50, 70, and in some instances, 150 and 200 per cent. less than those at present levied.

Statement of the deposits and coinage at the United States Mint in Philadelphia, for the month of June, 1860:—

Deposits.		dols c

	37,635,565		37,635,565

Dated the 2nd August, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,777,539	Securities	29,393,495
Public Deposits	4,234,969	Coin and Bullion	15,758,880
Private Deposits	14,717,654		
	41,730,162		45 152,375

The balance of Assets above Liabilities being 3,422,213*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£52,792
An INCREASE of Public Deposits of	274,948
A DECREASE of Other Deposits of	110,960
A DECREASE of Government Securities of	12,659
An INCREASE of Other Securities of	307,397
A DECREASE of Bullion of	155,954
An INCREASE of Rest of	27,597
A DECREASE of Reserve of	107,589

The present Bank returns do not present any great changes, but it is to be observed as rather an unfavourable feature that the other securities have increased by 306,397*l*, the bullion has again diminished by 155,954*l*, and the reserve of notes has decreased by 107,589*l*. These features, coupled with the fact that all the bullion brought to this country, both this week and last, is for the most part bought for the Continent, shows that a drain exists, which, if continued, does not betoken any great fall in the value of money.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 22,045,915	£ 20,672,469	£ 21,662,431	£ 23,130,567	£ 22,777,539
Public deposits	5,480,874	5,365,317	4,103.125	5,323 259	4,234,969
Other deposits	9,976,414	10,468,068	14,319,068	14,351,004	14,717,654
Government securities	14,285,583	10,596 031	10,774,367	11,208,572	9,758,795
Other securities	10,139,611	18,217.524	15,409,163	17.690,057	19,712,700
Reserve of notes & coin	10,108.181	5,671,172	10.097,956	9,493,516	8,164,070
Coin and bullion	16,822,376	11,302,152	17,340,421	17,330,336	15,758,880
Bank rate of discount	2½ p. c.	5½ p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	96¾	90¼	96¼	96⅛	95⅜
Average price of wheat	43s 7d	59s 8d	45s 8d	43s 0d	57s 0d
Exchange on Paris (shrt)	25 35 40	25 20	25 5 10	25 5 12½	25 10 17½
— Amsterdam ditto	12 0⅜ 1⅛	11 16 17	11 16	11 12½ 13	11 14½ 14½
— Hamburg (3months)	13 10½ 10½	13 8½ 8½	13 7 7½	13 4½ 5½	13 5½ 6

In 1850, in consequence of the gold discoveries in California, trade was beginning to expand, and, as a consequence, the demand for money increased. The rate allowed for call was 1¾ per cent. Consols still maintained the price of 96¾.

In 1857, there was a sudden and exceptionally severe pressure for money, leading to an increase of two millions in the other securities in the Bank within a single week. A million sterling in silver was being collected for transmission by the next packet for the East, and large quantities of gold were in course of despatch for the Continent. Further news from India was awaited with intense anxiety.

In 1858, the approaching issue of a fresh batch of Indian Government Debentures did not prevent a steady rise in the funds, which were also favourably affected by the receipt of more cheerful advices from the Paris Bourse. Good securities of all descriptions were in increased demand for investment. Great excitement had been occasioned by the announcement that the Atlantic Telegraph had been successfully laid.

In 1859, an increased demand for money arose in consequence of extension of trade following the restoration of peace between France and Austria. Money was ¼ per cent. higher in Lombard street for discount than at the Bank of England, and the great Lombard street establishments raised the rate they allowed for money at 7 days' call from 1¾ to 2 per cent.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 163,197*l*; in 1857, a deficiency of 7,754,456*l*; in 1858, a deficiency of 1,081,155*l*; and in 1859, a deficiency of 3,339,053*l*. In 1860, the deficiency is 4,995,046*l*.

MONEY AND DISCOUNT MARKET.—The tendency of money in the discount market is to be easier; the rate is from 3¾ to 4 per cent.; but first-class bills of short dates have been taken freely at 3¾. The rate for six months' bills is 4¾ to 5 per cent., and much greater eagerness to take them is evinced; this may arise from a slight return of confidence so greatly shaken by the failures in the leather trade. The demand for discount at the Bank of England has been very moderate, but has rather increased yesterday and to-day, in preparation of the 4th of the month. Money in the Stock Exchange is from 1½ to 2 per cent. on Government securities. Large sums have been lent by the discount houses at 1½ per cent.

The rate allowed on deposits is 3 per cent. at call, and 3½ per cent. at seven days' notice.

The following are the rates of discount at

	Bank rate. Per cent.	Open market. Per cent.
Amsterdam	4	4
Berlin	4	4
Frankfort	2	1½
Hamburg	No Bank rate	1½
London	4	3¾ to 4
Paris	3½	3 to 3½
St Petersburg	5	5 to 6
Vienna	5	4½

ENGLISH FUNDS.—The market in the English funds has been decidedly better during the week—the extreme prices in Consols have been 93¼ and 93⅞. The public continue to invest, but an impetus was given to the market by the pacific declarations of Louis Napoleon, and the desire he expresses in his letter to Count Persigny to have a good understanding with England. The Consol market to-day has slightly receded from the highest price in consequence of a large sale by the Court of Chancery, stated to be to the extent of 100,000*l* stock, and alsoof 40,000*l* by another broker. Letters from Paris indicate the probability of a French loan, and it is also stated that a Convention between the Powers and Turkey has been agreed on, which limits the number of troops to be sent to Syria to 12,000 men,—viz., 6,000 by France, and 6,000 by the other Powers.

New 3 per Cent. and Reduced are 93⅞ 4, and Consols 93½, leaving only ¼ per cent. in their favour as an investment as compared with Consols.

Exchequer Bills are 3 to 6 prem. The closing price of Consols this afternoon is 93½, rather sellers—the market being heavy on account of the sales previously mentioned, and also on account of the weather.

There is an idea that in consequence of a clause being introduced in the Savings Banks Bill, allowing long annuities and every description of guaranteed Government securities to be purchased for those institutions, that it is not improbable that Mr Gladstone may transfer a portion of the loan for fortifications, if raised in annuities, to those institutions—it being supposed the Government are largely indebted to

them for funds they have made use of instead of investing since the 31st December last.

Foreign Funds.—The market in foreign funds has been firm during the week, in most cases showing an advance. Mexican Bonds have been firmer, on the intimation of a probability of intervention by England and France.

The Committee of Mexican Bondholders have received letters from Mr G. S. Whitehead, dated Mexico, the 7th, 16th, and 29th June, and from the agents in Vera Cruz of the 1st inst., advising the receipt of bills for duties on Mexico for 63,139 dols 81c. The agents in Tampico send 5,464 dols in this packet, and they have received another batch of duty bills, amounting to 6,197 dols 79c. The balances in the hands of the agents, and at the capital, amount now to 800,330 dols 30c, besides the 5,464 dols now arrived, and at the Bank of England to 12,995*l* 10s 7d. It was not known at the capital whether General Miramon had had any action with the Constitutionalists, but he had retreated on Guadalajara, where he arrived on the 26th ult., "on account of the impracticable state of the country, the heavy rains having turned the low plain into a morass." The conduct of the new Spanish Minister has raised the suspicion that his aim was to employ force there for the benefit of the party in power at the capital. Regarding the present state of the country, it is observed, that *mediation* between the two parties is not only useless, but worse than useless; that *intervention* is the only remedy, and that intervention would now, probably, be accepted from any Power but Spain.

Turkish Bonds have also been rather firmer.

The closing price of French funds this afternoon is 68f 35c, being rather firmer.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

Railways.—So far as the dividends of the various railways have as yet been announced, they offer the following results as compared with last year:—

	Dividend declared. 1859. Per cent.	1860. Per cent.
Bristol and Exeter	5½	6
London, Brighton, and South Coast	5	5
London and South-Western	4½	4½
Lancashire and Yorkshire	4½	5½
Midland	5½	6½
Manchester, Sheffield, and Lincolnshire	4	10s pr sh.
North-Eastern, Berwick	4½	5½
— York	3½	4½
— Leeds	1½	2½

The railway market has been very buoyant, especially Midland, which has been as high as 130, a rise of nearly 9*l* per share during the week. Lancashire and Yorkshire, Eastern Counties, South-Eastern and Dover, North-Eastern, West Midland, Great Western, and Great Northern have all been sought for investment, and have risen considerably.

To-day, on the announcement of the South-Western dividend not being more than the corresponding period of last year, the shares of that line have fallen about 2*l* per share.

The fortnightly settlement passed off very satisfactorily, the supply of money being abundant, the rate for continuation not being more than 4 to 5 per cent.; and in some instances, especially Midland, the supply of stock being short, the dealers were glad to borrow it without interest.

The railway market is rather less firm to day, in consequence of some realisation having taken place.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day:—

	Railways. Closing prices last Friday.	Closing prices this day.

Bullion.—Messrs Pixley, Abell, and Langley have favoured us with the following account of the transactions in bullion and Indian Government loan notes during the week:—

Gold.—There has been more activity in our market during the past week, and the arrivals have been rather more numerous. They are as follows:—The Persia, from New York, with 90,000*l*; the Etna, from New York, with 43,000*l*; the Bavaria, from New York, with 20,000*l*; the Fulton, from New York, with 100,000*l*; the Atrato, from the West Indies, with 66,000*l*; the Kent, from Melbourne, with 236,000*l*. The whole of these amounts have been taken for the Continent; and about 28,000*l* has been withdrawn from the Bank, principally for Spain. The arrival of the Australian mail at Suez has been announced, and we shall doubtless hear of other vessels having left with gold for England.

Silver.—The Atrato has arrived from the West Indies; she brings about 70,000*l* in bar silver, but this will not be delivered in time for the outgoing mail to Calcutta and China. There has not been much doing during the past week, and we quote the price as 61⅞d per oz standard for this day. The Shannon takes 8,700*l* to Brazils, and the Ripon about 60,000*l* to Calcutta and China.

Mexican Dollars.—The Atrato brings about 250,000*l* in dollars. These will not be delivered until the 3rd instant, and therefore not in time for the China mail. Some limited amounts have been sold at 62⅜d per oz, and we do not think that those by the West India steamer will be sold much under that rate.

Exchange remains without alteration since our last circular. We quote Bank drafts on Bombay and Calcutta at 60 days' sight 1s 11⅞d to 2s 0⅛d; Madras, 1s 11⅞d nominal; bills with documents on Bombay and Calcutta, 1s 11d to 1s 11⅛d.

India Government Loan Notes.—More activity has existed in these securities within the last day or two; but prices have somewhat receded this afternoon. We quote 5 per Cents. 97 to 97¼, and 5½ per Cents. 102½ to 102¾.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 74s per oz, last price; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 1½d to 5s 1⅝d per oz std, last price; bar silver, containing 5 grs of gold, 5s 1⅞d per oz std, last price; fine cake silver, 5s 6½d per oz; Mexican dollars, 5s 2⅜d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11½d per oz, last price.

The Fulton, from America, brings 103,318*l* for this country, and 30,000*l* for France. The Sultan, from Lisbon, 2,705*l*.

The amount of specie that will be taken by the Peninsular and Oriental steamer Ripon on Saturday, for the East, is 90,154*l*—22,296*l* in gold, and 67,858*l* in silver. It may also be remarked that a great deal of bullion is sent to Spain, principally to pay for flour.

Joint Stock Banks.—The directors of the Royal Bank of Liverpool have issued the following ill-worded notice, in

consequence of the death of Mr Chaffers, the late manager :—

The Royal Bank of Liverpool, July 31.

Sir,—The sudden death of Mr Chaffers, late manager of this Bank, throws on the Directors an unexpected amount of responsibility ; but they are happy to assure you that there is nothing irregular in his accounts, and that the position of the Bank is such as to create no anxiety in their minds as to the depositors.

The Directors will immediately apply themselves to the appointment of a new manager, and in the meantime the Bank will be carried on as usual, and I hope may continue to enjoy your personal confidence.—I remain, Sir, yours faithfully,

F. Shand, Chairman.

Letters from Liverpool announce that the accounts of the Bank are quite regular and correct, and its affairs in the soundest state ; and, further, that the amount of leather trade bills does not exceed 10,000*l* or 12,000*l*.

At a meeting of the London and County Bank, Mr W. C. Jones in the chair, the accounts show that after making full provision for bad and doubtful debts, the payment of current expenses, interest to customers, income tax, and rebate on bills not due, and providing the usual Midsummer dividend of 5 per cent. for the half-year, there remains a surplus of 8,708*l* 19s 7d to be carried forward to profit and loss new account out of the profits of the half-year. The dividend will be payable on and after Monday, the 13th inst. The Chairman declared the state of the Bank to be most satisfactory—no losses having been sustained by the failures in the leather trade, which reflects great credit on the prudence and caution of the management. In every respect the business of the Bank was increasing.

Failures.—On behalf of Mr D. Carpenter, a composition of 8s in the pound was offered, which was accepted by most of the creditors present. The estate is to be wound up under inspectors. The accounts, prepared by Messrs Coleman, Turquand, Youngs, and Co., show liabilities of 25,371*l* 7s 1d; and assets, 10,948*l* 13s 5d.

The liabilities of Mr W. A. Page amount to 6,400*l* ; the assets to 3,500*l*. A composition of 10s in the pound, at three, six, and nine months, was offered and accepted, and the estate to be wound up under inspection.

On behalf of Messrs John Ridley and Sons, a proposition to pay 4s in the pound was offered. Two of the creditors purpose looking into the affairs, pending the result of which the meeting stands adjourned. The accounts, prepared by Mr C. F. Kemp, show liabilities of 23,084*l* 9s 6d ; and assets, 5,366*l* 16s 8d.

A meeting of the creditors of Mr John Morris has been held, when a composition of 9s in the pound, payable at four, eight, and twelve months, all being secured, was accepted. The accounts, made up by Messrs Quilter, Ball, and Jay, show liabilities, 8,335*l* 17s 11d ; assets, 4,665*l* 12s 9d.

At a meeting of the creditors of Mr A. Waring, a composition of 6s 6d in the pound, in two, four, eight, and twelve months, was agreed to by a small majority. Mr Waring commenced business in 1851 with a capital of 336*l* 17s 3d. His present liabilities amount to 56,361*l* 5s 11d, and he shows assets of 19,356*l* 4s 8d.

At a meeting of the creditors of Mr T. H. Mortimore, of Andover, Hants, tanner, a composition of 11s in the pound, payable 3s in three months, and 2s at six, nine, twelve, and eighteen months, was accepted. The liabilities amount to 95,754*l* 9s 3d; and the assets to 56,356*l* 14s 7d.

Messrs Murdoch and Son, extensive tanners in Perth, have suspended in consequence of great losses sustained through the recent failures in the leather trade in London. A meeting of their creditors has been called, at which the firm intend to make a proposal to pay in full, if time be granted.

The Mexican advices by the present West India mail state that the bankers Jecker, Torre, and Co., who failed in June with liabilities estimated at 900,000*l*, have obtained from their creditors an extension of five years, the firm undertaking to pay in full, with 6 per cent. interest. Meanwhile, the prevalent anarchy and distrust have caused the stoppage of other leading houses, among whom are Messrs. Ysidoro de la Torre and Co. (the leading partner in which was formerly a member of the firm of Jecker, Torre, and Co.), with liabilities for 300,000*l*, and assets of the nominal value of 500,000*l*, and Messrs Doormann and Co., an old and respectable German house. Two other firms are also mentioned as being likely to suspend. Owing to the impossibility of sending specie from the capital for exportation, merchants having remittances to make to Europe were unable to do so except at a sacrifice of 20 per cent.

At a meeting of the creditors of Mr Henry Hacker, a statement of his affairs, prepared by Messrs Coleman, Turquand, and Youngs, showed liabilities of 44,432*l* 2s 5d, and assets of 9,696*l* 16s 6d. A composition of 5s in the pound was accepted, payable 2s in six and twelve months, and 1s in eighteen, the second instalment being guaranteed. His only trade creditor is Messrs Streatfeild and Co. In the *pro formâ* balance sheet made up by the accountants, it appears that Mr Hacker's profits from 1849 to 1860 amounted 21,158*l* 7s 9d ; whilst his payments for commissions, interest, and stamps reached 12,162*l* 0s 3d ; factors' commissions, &c., 11,876*l* 14s 2d ; altogether making 24,038*l* 14s 5d, being 2,880*l* 6s 8d more than his profits. There had been no accommodation paper.

At the annual meeting of the Australian Mining Company, Mr R. F. Davis in the chair, the report stated, that after discharging the liabilities existing last year, a balance remains in hand of 1,457*l*, part of which will be required to meet various other claims, an actual surplus being thus left of 1,000*l*.

Miscellaneous.—According to official accounts, the imports of gold and silver into England for the 6 months ending the 30th June exceeded the exports by the sum of 248,813*l*; whereas, according to French official returns, the exports of gold and silver from France exceeded the imports by the sum of 3,240,000*l*,—whereas, in the corresponding period of 1859 the imports exceeded the exports by 7,016,000*l*, and in 1858 by 9,700,000*l*.

The applications for the new issue of 1,500,000*l* 5 per Cent. Debentures of the East Indian Railway Company amounted to between 1,100,000*l* and 1,200,000*l*, and the Company continue to receive applications for the unallotted portion.

The accounts from New York describe continued excitement in the stock market, chiefly owing to the improved prospects of the Western Railways, consequent upon the expected harvest, Erie Railway stock, which about six months or a year ago could have been purchased at 4 or 5, had recovered to 23¾. This, however, was partly owing to the rapid progress of a new line—the Atlantic and Great Western, which will ultimately bring the Erie into independent connection with the West and South. The imports of European goods into New York, after having been unusually small during the whole of the current year, had latterly been heavy, a change attributed to the increase in the orders sent to England and France since the establishment of confidence regarding the probable character of the grain crops. Continued remittances of specie to this country may therefore be anticipated. Money was easy, the rates of discount being 5 to 5½ per cent. for the best four months' paper, and 6 per cent. for that from four to six months.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is nearly 2·10ths per cent. dearer in Paris than in London.

The course of exchange at New York on London for bills at 60 days' sight is 109¾ to 110 per cent., which, when compared with the Mint par between the two countries, shows that the exchange is in favour of England; and, after making allowance for charges of transport and difference of interest, the present rate leaves a small profit on the importation of gol from the United States.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

So inactive was the demand for all kinds of home-grown wheat at Mark lane, this morning, that the whole of the supply offered remained unsold at the close of business. Prices, therefore, were nominally the same as on Monday; but, to have forced sales, 2s per quarter less money must have been submitted to by the factors. In foreign wheat, next to nothing was doing, at late rates. Barley and oats, however, changed hands freely, at full quotations. Other produce was unaltered in value. This week's imports are very large, viz., 49,910 quarters of wheat; 11,700 barley; 51,430 oats; 40 sacks and 11,380 barrels of flour.

At Liverpool, to-day, most kinds of produce were taken off slowly, at about Tuesday's quotations.

A report, dated Odessa, July 20, and forwarded by Messrs Pietroni and Draper, says:—

Wheat.—There is nothing on the spot of quality and condition suitable for shipment, but new Ghirkas for delivery by the 15th October, O.S., might be had at 44s to 45s per qr f.o.b. Sandomirka and Polish Odessa nominally 43s f.o.b.

	Shipments from Odessa from 1st to 30th June to United Kingdom.		Total since 1st January to all parts.

Freights (by telegraph), 55s. Exchange, 6.60 to 6.63.

We have advices from Alexandria to the 19th ult. Messrs Briggs and Co. observe that wheat was rather lower to sell. The quotations ranged from 31s 6d to 33s 6d per quarter. The latest advices from New York state that large quantities of produce were in progress of shipment to England, and that wheat was rather cheaper.

There has been an increased demand in the Liverpool cotton market during the week, and the total sales amount to 71,500 bales, including 49,500 bales to spinners, 6,000 bales on speculation, and 16,000 bales for export. Quotations are, however, reduced further to the extent of fully ⅛d per lb since Friday last. To-day the market closes quiet; sales about 8,000 bales. The calamity which occurred this week in connection with the Liverpool Bank has tended to increase the already existing willingness on the part of holders to realise.

Accounts from New York to the 24th ult. are to the effect that very little was doing in cotton, at previous rates.

There has been very little business doing in tea since we last wrote; nevertheless, prices continue tolerably firm.

Most descriptions of raw sugar have been in steady, though not to say active request, on former terms. Refined goods, however, are dull and rather cheaper.

The coffee market is steady, and both native and plantation parcels have commanded a slight advance.

The annexed return is furnished by Messrs Trueman and Rouse:—

* The stocks in Holland are in first hands only; in all other countries in first second and hands.

No disposition has been shown to operate in the rice market, but holders have, for the most part, declined to press sales.

The quarterly sales of cinnamon have been held. There were brought forward 16,381 bales and 87 packages of Ceylon, of which about three-fourths found buyers. Prices were a little irregular; in some instances the finer sorts went rather dearer, and the inferior sorts cheaper, but the bulk of the portion sold went, on an average, at the last sales' rates. The particulars are—175 bales firsts, from 1s 4d to 2s per lb; 700 bales seconds, 1s 1d to 1s 7d; 622 bales thirds, 8d to 1s 2d; and 141 bales fourths, 5d to 8d. Thirty packages of Tellicherry went from 7d to 1s 1d per lb.

Fruit has changed hands slowly at the late decline in value. The harvest of the new crop has been commenced, and the growth of currants is represented as a very large one.

"Since our last public sales," observe Messrs Greame and Co., of Liverpool, "the wool market has been rather quiet, although good useful current descriptions continue to meet ready sale as they arrive, at full prices. Stocks of all descriptions are very moderate, and the firm tone prevailing at the public sales now proceeding in London has tended to increase the firmness of holders in this market."

Messrs Grant, Hodgson, and Co.'s circular states that a good business has been passing in the tobacco market, at full quotations. The imports, last month, were 194 hhds—the delivery amounted to 1,055 hdds, and the stock is 14,446 hhds, against 10,582 hhds in 1859.

Saltpetre has sold slowly on former terms. Hemp has commanded extreme rates; but flax has met a dull inquiry.

Comparative Statement of Hemp and Flax remaining on hand in the London Warehouses, the Dealers' Stocks included, on the 1st of August, 1859 and 1860.

"Money matters remain in much the same position as at the date of our last review," observes the New York *Shipping List* of the 18th ult. "The amount offering on call to the brokers, if anything, is on the increase, and lenders, in not a few instances, experience some difficulty in placing balances at 5 per cent. The rates for mercantile paper of long dates have a tendency to greater firmness; the very best qualities were done yesterday at 5½ to 6 per cent. We quote:—

Our foreign importations are again rapidly on the increase; this is to be expected, in view of the anticipated active autumn and winter trade. Foreign goods continue quiet, and the aggregate sales are very light, while the market is heavy and more or less irregular. Prices fluctuate considerably, also, and may be considered merely nominal. The auction sales are about closed, and but little is doing out of the legitimate channel. Stocks of every description are ample, and there continues a great surplus of undesirable goods in market, which can only find purchasers at a ruinously low valuation."

The oil market, generally, has been firm, at full quotations. Linseed oil on the spot, 28*l* 15s to 29*l*. We have very little change to notice in the value of tallow. P. Y. C. on the spot is quoted at 53s, and for the last three months, 52s 9d per cwt.

The market for this staple remains dull, heavy, and irregular, and our quotations must be considered entirely nominal. The transactions have been light, and confined mostly to the immediate wants of spinners. The first bale of the new growth arrived in this City from Texas on Saturday last, several days earlier than usual, which gives evidence of the forwardness of the crop. It may be classed as middling fair, is well ginned, but of light staple, and reported sold at 15 cents, to be forwarded to Liverpool, to-day,

per Persia. The total sales since Friday aggregate about 2,000 bales. We quote:—

The cotton market was dull and slightly drooping in the early part of the week, but during the last day or two a considerable amount of business has been transacted, and prices have become much more regular and firm, especially in the lower grades. Consumers have purchased little more than their average requirements, several branches of their trade being much less profitable than for some time past. A good business has been done for export, and something also on speculation. Prices of American are unaltered. Egyptian are still unsaleable and irregular. Brazil are without change, though freely offered. East India have been in better demand during the last day or two. The sales to-day are 10,000 bales. A steady market. The reported export amounts to 16,020 bales, consisting of 10,240 American, 150 Brazil, and 5,630 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Lower prices having, in some instances, been submitted to, an increased amount of business has been passing in the manufacturing markets this week; nevertheless, in a comparative sense, stocks have rather increased, and some of the holders are willing sellers at current rates. There has been rather more doing in iron than for some time past, and the quotations have had an upward tendency. The coal trade is tolerably steady.

MANCHESTER, Aug. 2.—The market has been dull and drooping, the Eastern department having been kept in suspense by the absence till to-day of all tidings of the Indian mail, the other departments having been affected in sympathy therewith, and also by the unpropitious weather. Sellers have thus been throughout the week gradually approaching the views of buyers; and to-day there has been a greater amount of business transacted, though at low rates. The telegrams report slightly lower rates for our staples as prevailing at Calcutta; but those from China are regarded as more favourable. We slightly reduce our quotations.

BRADFORD.—Wool—Generally speaking, wool is held firmly, and spinners only purchase to the extent of their immediate requirements, being indisposed to buy freely, unless at a greater reduction than is yet current. In noils and shorts the market keeps steady, and the production taken into consumption without change in price. Yarns—The spinners are kept well employed, chiefly for export upon contracts made a few weeks back. There is but little inquiry for further quantities. In the home trade there is no new feature. Pieces—There is comparatively little business passing. Merchants are very careful about entering into large engagements, and keep light in stock.

HUDDERSFIELD.—We have no alteration to notice in our market. Prices are still very reasonable, more so than the prices of wools at the sales seem to warrant.

HALIFAX.—The textile manufactures of this town and district—worsted, woollen, and cotton—are all rather quiet. Goods move off in rather small quantities, and manufacturers complain of a paucity of orders. The yarn department is rather flat, the export trade being inanimate, except in the case of a few orders on hand.

ROCHDALE.—The wool trade is very quiet. The demand for Lancashire flannels and Welsh imitations, and also for all heavy flannels, is good; but for fine Saxonies there is a very quiet feeling. Fancy printings are very active. Yorkshire goods of all descriptions go well. Manufacturers generally complain of the high rates of wool.

LEICESTER.—There is a fair amount of business doing in regular hosiery goods, and the demand continues steady, the trade generally being in a healthy condition. At Hinckley and Loughborough business is in a satisfactory condition, and the workpeople are well engaged. Wools are quiet, and no higher prices can be looked forward to. Yarns are a steady sale, spinners being well employed.

NOTTINGHAM.—During the last few days the lace trade has been more quiet than for some time past, and there is not an average amount of business doing. Nearly every branch feels the depression, and many of the workpeople are either totally unemployed, or only making limited time. There is not so much doing in the plain branch, both as respects stiff nets and Mechlins. In the fancy trade there is not much change; but purchases are made with caution. Most of the silk houses are flat, and it is only in a few choice goods that anything like business is doing. The hosiery trade remains exceedingly dull, and from present appearances no immediate change for the better is expected. The price of yarns is too high for manufacturers to produce, except to order, and as a natural consequence the operatives are very badly employed.

GLASGOW.—An active demand for all classes of wool still continues, and a large amount of business is being done at full rates. Laid black-faced and cross are in especial demand, and remain no time on hand. Laid Cheviot are also being rapidly bought up. Fine white wools still command extreme rates.

WOLVERHAMPTON.—Current prices of pig iron:—Staffordshire cold blast, 4*l* 5s; best native hydrate pigs, 3*l* 12s 6d to 4*l* 2s 6d; first-class all mine grey forge pigs, 3*l* 7s 6d to 3*l* 12s 6d; good mine pigs, with a modium of flue cinder, 2*l* 17s 6d to 3*l*; mine pigs, deteriorated by cinder, 2*l* 12s 6d to 3*l*; Cleator Moor hæmatites, 3*l* 11s 6d to 3*l* 12s 6d; Workington hæmatites, 3*l* 11s to 3*l* 12s 6d; Kirkless Hall hæmatites, 3*l* 10s to 3*l* 12s 6d; Barrow hæmatites, 3*l* 12s 6d to 3*l* 15s; grey forge cinder pig iron, 2*l* 10s to 2*l* 15s; white forge cinder pigs, 2*l* 5s to 2*l* 10s; melters, Nos. 1, 2, and 3, 2*l* 15s to 2*l* 17s 6d; superior makes of all mine melting iron, 3*l* 7s 6d to 3*l* 17s 6d, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 5s; Northern hæmatites from 3*l* 10s to 3*l* 15s, according to brand and quality. The Glasgow market for Scotch pigs has improved. The shipments last week were 14,400 tons, against 14,093 tons corresponding week of last year.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, July 18.—FLOUR.—The market for State and Western flour presents no new feature worthy of especial remark. There has prevailed a steady, fair inquiry for all descriptions for the Eastern and local trade, as also a moderate demand for shipment, and holders have thereby been able to obtain above previous rates for the most part, though considerable quantities have changed hands at a slight reduction in values. The receipts are fair, and are amply sufficient to meet the current wants of the trade. Transactions for the three days aggregate 36,500 bbls, including 14,000 yesterday, closing steadily, under a moderate demand for all kinds, at our corrected quotations below. Canada flour is in moderate request, and the market is heavy, at a slight reduction on the lower grades; the sales are 1,800 bbls, of which 800 were placed yesterday. We quote:—State, superfine brands, 5.15 dols to 5.20 dols per bbl; State, extra brands, 5.40 dols to 5.55 dols; Michigan, fancy brands, 5.25 dols to 5.35 dols; Ohio, common brands, 5.30 dols to 5.40 dols; Ohio, fancy brands, 5.45 dols to 5.55 dols; Ohio, fasr extra, 5.55 dols to 5.75 dols; Ohio, good and choice extra brands, 5.90 dols to 7.25 dols; Michigan, Wisconsin, Indiana, &c., 5.30 dols to 5.60 dols; Genesee, fancy brands, 5.60 dols to 5.70 dols; Genesee, extra brands, 5.80 dols to 7.50 dols; Missouri, 5.80 dols to 7.50 dols; Canada, 5.10 dols to 7.50 dols. Southern flour has been in limited demand, and the market somewhat depressed in consequence. Export from July 1 to 17, 122,512 bbls, against 34,658 in 1859.

GRAIN.—The market for wheat has been slightly depressed in tone, and the lower grades have experienced a trifling depreciation. The better grades have realised full prices for the most part, however, and considerable quantities have been taken for shipment as well as for milling. The advices from nearly all sections of the West, relative to the maturing crop, continue of the most flattering character, and planters are generally sanguine of reaping another bountiful harvest. The total sales since Friday comprise 241,000 bushels, including 37,400 winter red Western at, 1.35 dol to 1.37 dol; 1,800 white Kentucky, 1.57 dol; 65,000 Milwaukee

Club, 1.25 dol to 1.30 dol; 10,000 amber Iowa, 1.30 dol; 900 new amber Jersey, 1.45 dol; 300 new white Southern, 1.45 dol; 5,800 white Ohio, 1.45 dol; 30,700 Chicago spring, 1.25 dol to 1.26 dol; and 11,000 white Western, 1.45 dol. Corn is heavy, and lower for Western, but with a fair demand at the reduction; the sales comprise 232,000 bushels, including 87,000 yesterday, closing at 61 to 62 cents. for Western mixed. Export from July 1 to 17: wheat, 761,198 bushels; corn, 113,021 bushels, against 16,268 in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Only limited supplies of home-grown wheat have been on offer in the leading markets of consumption held during the present week. Owing, however, to the large importations of foreign produce both in London and at the various outports, the demand for both red and white qualities has ruled very inactive, at about previous quotations. Millers, generally, seem determined to operate for immediate wants only. The stocks of foreign wheat in warehouse are rapidly increasing; nevertheless, importers are very firm in their demands, and sales have been made on quite as good terms as last week. Most of the late heavy arrivals of barley have disposed of, at full currencies; but we can notice no improvement in the demand for, or value of, malt, the receipts of which are still very moderate. Large quantities of foreign oats have changed hands, at the late decline. Both beans and peas have ruled firm in price, and the flour trade may be considered in a healthy state.

Advices from most parts of the country state that harvest work cannot be commenced for some time hence. On the whole, however, the wheat crop gives promise of a fair average yield, should the weather prove fine for cutting and stacking. Both beans and peas promise a large return; but both barley and oats will, we think, be very deficient.

The satisfactory yield of the grain crops in Southern Russia is described as follows by the Odessa correspondent of Messrs Pietroni and Draper, under date the 20th July:—

The harvest is terminated in our neighbourhood. Notwithstanding the injury done by locusts, which have destroyed about 600,000 chetwerts (or about three-quarters of the crops) of the adjoining districts, the yield will still be very abundant, and the quality highly satisfactory. The samples of new Ghirkas which have already appeared give an average of 10 poods, or equal to 62¼ lbs per bushel natural weight. Accounts from Poland and Bessarabia respecting the crops of both corn and seed are equally favourable. Wheat—There is nothing on the spot of quality and condition suitable for shipment; but new Ghirkas for delivery by the 15th October (O.S.) might be had at 44s to 45s per qr f.o.b. Sandomirka and Polish Odessa nominally 43s f.o.b. Maize—No stocks, and no supplies expected until May; nominal price, 25s 6d f.o.b. Barley—No stocks, but supplies of new will shortly come to market, and then favourable purchases will be practicable. Business has been done for October and November at 17s f.o.b. Linseed—Large supplies will arrive in September, when it is to be hoped that good purchases will be feasible; the last transaction was in sifted seed, at 44s per qr f.o.b., but we look to a considerable decline, and orders should be sent out in anticipation.

In France and Germany, the dealings in produce on English account have rather increased, and extensive quantities of wheat, maize, and flour continue to be shipped from the United states to Liverpool.

In Scotland, all kinds of produce have commanded very full prices; but the trade has been by no means active, and the demand has continued restricted.

Most of the Irish markets have been scantily supplied with all kinds of grain, which have moved off slowly, at about previous rates.

The supply of English wheat here to-day was moderate, but no sales took place in it, and prices were nominally the same as on Monday. Foreign wheat was very dull, but not cheaper. Barley, oats, beans, and peas were in request at full quotations. Flour was a dull sale.

Mr Ed. Rainford reports the state of the floating trade as follows:—Since this day week, up to noon to-day, only four vessels have arrived off coast for orders, viz.:—Wheat, 1 cargo from New York, 1 Hamburg, and 1 Dantzie; maize, 1 from Sulina. There has been a good business done in cargoes afloat at improving prices, viz:—Wheat, arrived, Odessa Ghirka, 3 cargoes at 51s, 50s 6d, and 54s per 492 lbs; Berdianski, 1 at 54s 8d per imperial quarter; 1 at 54s 9d per imperial quarter, and 2 at 54s 7½d and 54s 9d per 492 lbs; Galatz at 49s 9d, and Ibraila at 47s 6d per 480 lbs; on passage, Marianople, about 55s per 492 lbs; hard Taganrog, 2 cargoes at 50s 6d and 51s per 492 lbs; just shipped, Taganrog Ghirka, at 53s 6d per 492 lbs. Maize, arrived, 2 Ibraila, with very few lay days, at 29s; 2 with some warmth at 28s 9d and 29s; 2 with some slight dry warmth, 29s 4½d and 29s 6d; 4 at 29s 3d, 30s, 30s 4½d, and 30s 6d; 1 Cavala, imperfect, at 29s; 1 Danubian (slight warmth), 30s; 2 Wallachian at 29s 3d and 30s, all per 480 lbs; 2 Odessa at 31s 4½d and 31s 6d; 1 Moldavian, 31s 6d; and 1 Galatz at 31s 9d per 492 lbs. For another cargo of Galatz 32s has been refused. On passage, Ibraila, about 3,000 quarters at 30s per 480 lbs, only three days remaining. Barley, arrived, Danubian at equal to 26s 6d and 27s per 400 lbs; Ibraila, imperfect, at 25s per 400 lbs: to be shipped up to the 3rd September, Danubian at 25s; shipped or shipping, Odessa, 25s 3d per 400 lbs. Rye, arrived, Odessa at 31s 6d per 480 lbs.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—Last week's rates have been generally supported. Strong refining qualities remain firm, and a fair amount of business is reported in West India. Floating cargoes of foreign sell more freely for the United Kingdom. Soft Cuba sold slightly cheaper at the public sales, otherwise there is no change in quotations, although the market is less active than of late. The quantity of West India disposed of to yesterday amounted to 3,080 casks, including various parcels by auction: brown, 33s to 37s; grey and yellow, 37s 6d to 40s 6d; grainy Demerara, 45s; Barbadoes, 36s 6d to 44s; dabs, 32s 6d to 34s per cwt. The clearances for home use now show an increase over the previous year's of 7,730 tons, and the deliveries a diminution of 1,310 tons, leaving the stock 70,800 tons, against 58,400 tons in 1859 at the same period.

Mauritius.—10,823 bags went off at about previous rates: low to good middling yellow 39s to 41s 6d; low to good brown, 33s 6d to 37s 6d; grainy sorts, 40s 6d to 44s per cwt.

Madras.—1,100 bags native have sold by private contract at 32s 9d to 33s 6d per cwt.

Foreign.—The public sales have been smaller than usual. 536 casks Cuba found buyers at 38s to 41s 6d for soft brown to good yellow. 279 casks Porto Rico ranged from 38s to 43s. 383 boxes washed Havana, 39s to 45s; brown, 36s 6d to 38s 6d. Of 2,445 boxes sound, a great deal sold: brown 37s to 40s; grey, low to fine, 40s to 45s 6d. 279 casks Porto Rico, brown and yellow, 38s to 43s. A floating cargo Havana,

comprising florettes and grainy white, has sold for a near port at 31s 9d, and four of yellow for the United Kingdom: No. 10½ to 11, 27s 6d; 11½ to 12, 28s; 13¼ to 14, 29s 6d per cwt.

Refined.—There has been a moderate inquiry from the trade, but the market is now rather quiet, and the better sorts of goods can be obtained on slightly easier terms than last quoted, viz., 52s to 52s 6d: common remain at 51s 51s 6d. Wet lumps and pieces are occasionally rather cheaper.

Molasses.—350 puns West India have sold this week: Antigua, 17s to 18s; other kinds, 16s to 17s per cwt.

Rum.—There has been an improved demand at the low rates previously current: Leeward Island, proof, 1s 6d to 1s 7d; Demerara, fair to good, 1s 9d; Berbice, 1s 8d per gallon. Yesterday a large business was done, chiefly in Demerara at 1s 9d per gallon. The stock has been further augmented to 28,000 puns 6,100 hhds, against 23,150 puns 7,000 hhds in 1859.

Cocoa.—Holders have shown rather more desire to realise, and a few sales have been effected at easier rates. By auction, 200 bags Trinidad went at 68s to 71s for greyish to good red. 256 bags Surinam were chiefly taken in at 75s to 78s, a few lots selling at 73s 6d to 74s per cwt.

Coffee.—At the public sales of plantation Ceylon, comprising only 171 casks 128 barrels and bags, prices generally ruled steady, and the various parcels brought forward sold: low middling to good middling, 70s 6d to 76s 6d. A few small parcels of native have changed hands, by private contract, at the former quotations. 6,292 bags Costa Rica were nearly all sold at 63s 6d to 71s 6d for good ordinary to middling, and 72s to 74s 6d per cwt for middling bold bright. A floating cargo of St Domingo has sold at 61s 6d per cwt for a neat port.

Tea.—The market has not shown any improvement since last Friday, the demand being still inactive. General quotations, however, remain without alteration. The nearest value of common congou is 1s 4d per lb. No public sales have taken place.

Rice.—This article has become quiet, and white Bengal barely maintains its former value. In public sale, 4,128 bags went at 12s to 14s, for middling to very good new grain. The second portion of 5,900 bags Necrancie Arracan was taken in at 10s 6d to 11s. 1,804 bags common Rangoon went at 8s 6d to 9s 6d; and 1,674 bags damaged pinky Madras, 9s to 10s per cwt. Privately a few parcels have changed hands upon similar terms. Last week about 10,000 bags soft grain sorts sold (which were not generally reported on Friday), the bulk Rangoon, at 9s 9d.

Imports and Deliveries of Rice to July 28, with Stock on hand

Exported	8300	13000	12640	30850
Stock	45850	69600	93300	43300

Spices.—The quarterly sales of cinnamon held on Monday comprised 1,657 bales Ceylon, and a large proportion sold. Fine qualities generally met with ready buyers at extreme rates to 1d advance, but the lower grades went 1d, and in some cases 2d cheaper, owing to the large supply: first sort ranged from 1s 3d to 2s; second, 10d to 1s 7d; third, 7d to 1s 2d; fourth, 6d to 8d per lb. 21 bales Tellicherry were chiefly bought in. The pepper market is very firm, with an upward tendency. Common Singapore has sold privately at 4¼d to 4½d, and a small parcel good, by auction, realised 4½d. 616 bags pimento were two-thirds disposed of at the previous quotations of 3⅞d to 3¾d per lb for common to good. 261 barrels Jamaica ginger: low to good realised 4*l* 3s to 6*l* 6s. 863 bags Bengal were bought in at 21s to 22s 6d. 30 cases cassia buds part sold at 8*l* 10s to 9*l* per cwt.

Sago.—655 bales found buyers at steady prices: medium, low to good, 15s 6d to 18s; good small, 19s 6d; fine large sort, 20s 6d to 24s. Sago flour of middling quality has sold privately at 16s 6d per cwt.

Saltpetre.—The market has been inactive; yet few parcels are offering for sale. By private contract, Bengal has sold at 44s for fine, and at 40s to 43s for refraction 11 to 6½. At auction, 107 bags, refraction 3½, were bought in at 44s 6d per cwt.

Imports and Deliveries of Saltpetre to July 28, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	8230	11900	6400	10000
Delivered	7450	10430	8600	6800
Stock	4650	4420	4470	5200

Cochineal.—No public sales were held to yesterday.

Dyestuffs.—The market for Gambier is firmer, but there has not been much business done: present quotation, 17s 9d to 18s. Rather more inquiry prevails for Cutch, and a large parcel sold at 26s 9d. Holders now require 27s to 27s 6d for good.

Sapan Wood.—65 tons were chiefly bought in: Siam, 6*l* to 8*l* 10s; Manilla, 6*l* to 7*l*. Jamaica logwood sold at 4*l* 12s 6d. Jamaica fustic part sold at 5*l* 15s per ton.

Drugs.—The only important alteration established in the sales yesterday consisted of the advance on yellow bark, which went 5d to 7d per lb dearer for the better qualities. About 1,000 cases castor oil sold during the week, without material alteration in prices, some kinds being slightly cheaper. Turkey opium was partly sold at 18s to 18s 6d per lb.

Rubber.—Para of good to fine quality was bought in at 2s 10d to 3s, and a parcel of good East India at 2s 2d per lb.

Metals.—The market is by no means active, and the transactions generally have been upon a moderate scale. Manufactured iron remains quiet. Scotch pig has maintained the late improvement, and is now rather dearer, closing at 52s 9d to 53s per ton for mixed numbers. The stock of spelter has increased to 4,250 tons. The market is firmer, 20*l* 5s to 20*l* 7s 6d per ton being paid on the spot, and several hundred tons have sold to arrive for Hull, the exact particulars of which do not transpire. Few sales have taken place in foreign tin, and quotations are nominally unchanged. 500 tons East India copper coin sold by the Netherland Trading Company on the 26th ultimo at 49*l*.

Hemp.—Some business has been done in Manilla privately at low prices. Russian keeps steady. The jute market is unaltered. On Wednesday, 2,450 bales offered by auction went off at previous rates: common to good, 13*l* 10s to 19*l* 2s 6d per ton. The stock has increased to 15,500 tons. The stock of Petersburg clean amounts to 1,450 tons, against 2,050 tons last year, and 2,350 tons in 1859 at the same period.

Linseed.—The market is firm and stocks much reduced. Calcutta commands 50s to 51s; Bombay, 52s 6d to 53s; Black Sea, 49s 6d; afloat, 50s per quarter.

Turpentine.—No sales of rough are reported. Spirits have sold at 32s per cwt for American, being again lower.

Oils.—Sperm has again advanced, being worth 97*l* to 98*l*. Other fish oils are unaltered. The market for linseed is steady at 28s 9d on the spot, and 29s 3d to 29s 6d for delivery in the next four months. More inquiry prevails for rape: foreign refined, 45s; brown, 42s: for delivery in the last four months, 46s and 44s. Palm remains at 45s for fine. Cocoa-nut is very firm. By auction, Ceylon in puncheons went at 46s 6d; Cochin, 48s 3d to 49s; Sydney, 41s 9d to 46s 6d per cwt. No transactions are reported in olive, and the market continues very dull.

Tallow.—The market has ruled steady throughout the week, and quotations of foreign are stationary, viz.: 1st sort Petersburg Y.C., 52s 9d; for delivery in this month and next, 52s 6d to 52s 9d; last three months, the same. 405 casks by auction partly found buyers. South American, 51s 6d to 53s; Australian, 46s 3d to 50s; East India, 53s 6d. 130 packages China, 51s 3d to 52s 3d.

Particulars of Tallow.—Monday, July 30.

POSTSCRIPT. Friday Evening.

Sugar.—The market was steady to-day, and the public sales went off without material alteration. Various parcels of West India sold by auction, and the week's business amounts to 4,460 casks. 812 bags Mauritius sold at previous rates. 540 bags Bengal: Bally, 46s to 47s; syrups, 41s to 41s 6d. 1,008 bags Madras native, 32s to 33s 6d; soft date sorts, 29s to 30s. 2,492 baskets Java were bought in above the value. A floating cargo of Paraiba has sold for a near port at 22s per cwt.

Coffee.—The public sales, comprising 243 casks 187 barrels and bags plantation Ceylon, and 1,550 bags Costa Rica, went off at full, and, in some cases, slightly higher rates. One lot fine Jamaica realised 97s.

Rice.—1,548 bags Bengal, good new white sold at 14s per cwt.

Spices.—466 bags pimento were bought in above the value, and withdrawn. 100 cases cassia lignea partly sold at 90s per cwt for pile 1.

Saltpetre.—266 bags low Bombay realised 35s to 36s 6d per cwt.

Cocoa.—300 bags Trinidad were partly sold at 63s to 72s. 10 bags Grenada, good red, 64s 6d.

Cochineal.—244 bags partly sold; the better kinds at full, and ordinary at barely previous rates.

Shellac—81 chests went at higher prices: garnet, 9*l* 5s to 9*l* 7s 6d; button, 9*l* 5s to 9*l* 17s 6d per cwt.

Tallow.—Y.C., 52s 6d to 52s 9d; and 52s per cwt for the last three months.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar continues without any alteration worth noting. Treacle continues in demand for export. Owing to political events there is nothing doing in Dutch crushed.

Green Fruit.—A good demand for West India pine-apples, arrivals of which are large and tend to depress prices. 10,000 sold by Keeling and Hunt at public sale, went at easier rates. No improvement in the price of lemons, the weather checking consumption. Moderate inquiry for nuts, and but few transactions entered upon at the late advance in Barcelona.

Dry Fruit.—The market is extremely dull for every kind of fruit, and scarcely any business doing. The crop accounts continue satisfactory.

English Wool.—The trade very quiet; long wool lower by ½d per lb.

Colonial Wool.—The public sales are progressing firmly at opening rates.

Flax.—The market is unaltered.

Hemp.—We have had a quiet week of business: prices rule about stationary.

Cotton.—Sales of cotton wool from Friday, 27th July, to Thursday, 2d August inclusive:—900 bales Surat at 2¾d to 4½d for very ordinary to good fair Dhollera. The market continues dull, and the transactions moderate, prices being in some cases rather easier than last week. Yesterday, 160 bales Western Madras and 230 Surat were offered at public sale: the former were bought in above the market value; the latter sold at 3¾d per lb, being fully fair Dhullera. Sales to-day, 200 bales low Tinnivelly at 3d per lb.

Silk.—The market at present a little firmer, but no alteration in prices. A little more demand, both at home and for export.

Tobacco.—Sales have continued to be effected to a full average extent. The attention of the trade has chiefly been directed to middling and ordinary Western strips, and of which several parcels have found buyers. These purchases have been considerably influenced by the comparative scarcity of most descriptions of substitutes.

Leather and Hides.—There has been a better feeling in the leather market during the past week, and the transactions show a decided increase in amount. The supplies, however, of fresh goods at Leadenhall, on Tuesday, were larger than for some weeks past, and prices were again slightly in favour of the buyers, but the stocks on hand have not generally increased.

METALS.—The market continues to be very flat in all branches of metal business. Copper keeps up in quotations, but transactions are very restricted, although ores are sold at full rates. Iron is without change, and tin is the same. Spelter continues quiet, but prices do not recede. Lead is again a trifle easier to buy. Tin plates are in moderate request only.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	55	0
Fat by ditto	2	9½
Yellow Russian	54	3
Melted stuff	38	6
Rough ditto	22	6
Greaves	20	0
Good dregs	7	0

Imports this week 2,504 casks.

PROVISIONS.

The supply of bacon being very short and the demand brisk, has sent the prices up 2s and 4s. In fact shippers are very chary of taking forward orders at all, as they anticipate a further rise in prices. The scarcity of pigs may possibly realise their expectations; but, although the weather is getting warmer, the lateness of the season must operate on the consumption, if the excessive prices do not put a stop to the sale altogether. Hamburg bacon has followed the Irish, and cannot be bought under 72s landed. In hams there is very little doing at lower rates. The butter trade is still very brisk; large arrivals and everything sold.

METROPOLITAN CATTLE MARKET.

MONDAY, July 30.—The total imports of foreign stock into London last week amounted to 13,204 head. In the corresponding week in 1859 we received 10,972; in 1858, 7,877; in 1857, 7,488; in 1856, 8,010; in 1855, 6,696; and in 1854, 7,044 head.

From our own grazing districts the receipts of beasts fresh up to-day were moderate, and mostly light in quality. Prime Scots, Shorthorns, &c., moved off steadily, at fully last Monday's currency; but all other breeds were a dull inquiry, at barely late rates. The supply of sheep was much less extensive. Nearly all breeds were in steady, though not to say active, request, at prices equal to this day se'nnight. We have to report a fair demand for lambs, at full quotations. Calves—the supply of which was only moderate—changed hands steadily, at full quotations.

Supplies.	Aug. 2, 1858.	Aug. 1, 1859.	July 30, 1860.
Beasts	5038	4610	4200
Sheep and Lambs	26530	29030	24600
Calves	355	228	304
Pigs	400	380	300

THURSDAY, August 2.—The supply of beasts here to-day was very moderate. Prime breeds moved off steadily, at quite Monday's currency; otherwise the beef trade was in a sluggish state, on former terms. We were fairly supplied with sheep. Downs and half-breds were firm in price, but other breeds were inactive, at late currencies. Lambs, the show of which was tolerably good, commanded previous rates, with a fair inquiry. Calves were steady, at Monday's quotations.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	6	3	10	Prime Southdown sheep	5	4	5	6
Second quality ditto	4	0	4	4	Large coarse calves	4	0	5	0
Prime large oxen	4	6	5	0	Prime small ditto	5	2	5	6
Prime Scots, &c.	5	2	5	6	Large hogs	4	0	4	6
Coarse and inferior sheep	3	10	4	2	Small porkers	4	8	5	0
Second quality ditto	4	4	4	8	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	4	10	5	2	Quarter old store pigs	23	0	30	0

Lambs, 5s 8d to 6s 8d.

Total supply—Beasts, 950; sheep and lambs, 11,200; calves, 530; pigs, 300.
Foreign supply—Beasts, 600; sheep, 2,000; calves, 300.

NEWGATE AND LEADENHALL.

Prime meat, the supply of which is limited, moves off steadily, at full quotations. All other kinds are a dull inquiry, at late rates.

Per 8 lbs by the carcase.

	s	d	s	d		s	d	s	d
Inferior beef	3	0	3	6	Mutton, inferior	3	6	4	0
Middling ditto	3	8	4	4	— middling	4	2	4	6
Prime large	4	6	4	8	— prime	4	8	5	2
Prime small	4	8	4	10	Large pork	4	0	4	6
Veal	4	0	5	0	Small pork	4	8	5	2

Lamb, 4s 10d to 5s 10d.

HOP MARKET.

BOROUGH, Monday, July 30.—The reports from all the plantations are decidedly worse; and our market is active, at the following currency:—Mid and East Kents, 100s, 126s, 147s; Weald of Kents, 100s, 120s, 130s; Sussex, 95s, 110s, 120s. The duty has receded to 90,000*l*, with few backers.

FRIDAY, Aug. 3.—The accounts from the plantations speak of increase of vermin generally and of mould in the best parts of Mid Kent and East Sussex. Duty, 80,000*l* to 90,000*l*.

POTATO MARKET.

WATERSIDE, Thursday, Aug. 2.—The arrivals of this excellent esculent, both coastwise and by rail, was limited, with a fair business doing, at from 80s to 150s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* 0s to 5*l* 10s; new ditto, 2*l* 15s to 4*l* 10s; old clover, 4*l* to 6*l*; new ditto, 3*l* 15s to 5*l* 5s; and straw, 1*l* 15s to 2*l* 5s per load. A fair demand.

CUMBERLAND.—Old meadow hay, 3*l* 5s to 5*l* 15s; new ditto, 3*l* to 4*l* 14s; old clover, 4*l* to 6*l*; new ditto, 3*l* 15s to 5*l* 5s; and straw, 1*l* 18s to 2*l* 8s per load. Trade steady.

WHITECHAPEL.—Old meadow hay, 3*l* to 5*l* 15s; new ditto, 2*l* 15s to 4*l* 10s; old clover, 4*l* 4s to 6*l* 6s; new ditto, 3*l* 16s to 5*l* 5s; and straw, 1*l* 16s to 2*l* 6s per load. Trade firm.

COAL MARKET.

FRIDAY, Aug. 3.—Wall's-end:—Russell Hettons 18s 9d—Braddyll's Hetton 18s 9d—Tanfield Moor 13s 3d—South Hetton 20s—Cassop 19s—Heugh Hall 18s—Whitworth 16s—Wylam 16s 6d—Hastings' Hartley 16s per ton. Ships at market, 54.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 3.—There is a fair amount of business doing in most descriptions of foreign, and prices have if anything rather an upward tendency, but the uncertainty of the harvest prospects compels buyers to be very cautious in increasing their stocks beyond their immediate wants.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 3.—The grain market firm for wheat and flour, but quay parcels of American much pressed. Indian corn in active speculative demand, at 6d advance. Ibrail and mixed American, 31s; Galatz, 32s. Beans rather ditto. Oatmeal dull, but held for more money.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 3.—There is no change this week in the price of manufactured iron, for the better descriptions of which a fair demand exists. In Scotch pig iron there has been only a very moderate business during the past week, with little fluctuation in price. The transactions in copper have again been only to a limited extent, the quotation for which remains unchanged. Lead continues dull.

The Gazette.

TUESDAY, July 31.

BANKRUPTCY ANNULLED.

T. Toynbee, Southwick street, Hyde park, hotel keeper.

BANKRUPTS.

J. H. Smith, Wyld's rents, Bermondsey, tanner.

SCOTCH BANKRUPTS.

G. Schrader, leather, hide, and bark factor, Glasgow.
Mrs Bethia or Betsy Smith, merchant, Stirling.
D. Walker, builder, Glasgow.
A. Macintosh, leather merchant, Glasgow.

The latest advices from Jamaica are to the 9th ult. In business the transactions for the fortnight were unimportant. From Barbadoes we learn that the quantity of produce shipped to date was as follows:—Sugar, 34,054 hhds, 2,640 tierces, 7,508 barrels; molasses, 10,185 puns, 478 hhds, 929 barrels; rum, 309 puns, 423 hhds. The following is from our St Lucia correspondent, dated the 11th ult.:—"The weather has been very seasonable. Two weeks ago rain was wanted very much; it fell in abundance, and has entirely changed the face of the country from one end of the island to the other. Things look well. A number of small estates have been brought into cultivation during the past two years. The number of barrels (which these small estates only make) has tripled; immigration has gone a far way in doing this, and the more Coolies brought into the island the more produce will be exported." Trinidad advices are to the 9th ult. The shipping in the Gulf was diminishing, and freights were quoted at 1s 9d for sugar and 2s for cocoa. The present year's crop was entirely over, and the prospects for next year were encouraging. All operations in sugar and cocoa had ceased. The produce shipped to date was as follows:—Sugar, 27,171 hhds, 3,837 tierces, 2,491 barrels; molasses, 5,572 puncheons, 105 tierces; rum, 534 puncheons; cocoa, 3,612,830 lbs; coffee, 360 lbs. From Grenada the shipments to date had been as under:—Sugar, 5,177 hhds of 16 cwts against 5,077 at the same time last year, and 4,708 the year before; rum 695 puncheons, against 1,233 last year, and 1,123 the year before, at corresponding dates; 5,630 bags of cocoa, against 4,960 last year, and 5,589 the year before. There is no news of importance from the French West India Islands. Business generally was very dull, and money extremely rare. On the 3rd ult. sugar was at 22*f* to 27*f* the 50 kilogrammes (about 17s 6d to 21s 6d per cwt).

COMMERCIAL TIMES

Weekly Price Current.

☞ the prices in the following list are carefully revised every Friday afternoon, by an eminent house in each department.

LONDON, FRIDAY EVENING.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending July 21 amounted to 553,170*l*, and for the corresponding week of last year to 515,250*l*, showing an increase of 37,920*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 243,282*l*, and for the corresponding period of 1859 to 227,639*l*, showing an increase of 15,643*l*.

MIDLAND.—The directors of this company have just decided on recommending to the proprietors a dividend on the ordinary stock for the half-year ending the 30th of June last at the rate of 6½ per cent. per annum.

BRISTOL AND EXETER.—The half-yearly accounts of this company to the 30th of June last were laid before the board on Wednesday, and the directors decided upon recommending to the proprietors a dividend at the rate of 6 per cent. per annum.

LONDON AND SOUTH-WESTERN.—The directors of this company have resolved to recommend to the proprietors, at the general meeting on the 9th inst., that the dividend for the half-year ending the 30th of June, 1860, be at the rate of 4½ per cent. per annum on the capital of the company.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, July 30.—The railway market opened this morning with increased buoyancy, and a further general advance took place, Midland touching 123¾; Lancashire and Yorkshire, 109½; and South-Eastern, 88¼. Later in the day there was a reaction, but the final prices mostly showed an improvement over Saturday. In foreign descriptions, Dutch Rhenish and Great Luxembourg advanced. Lombardo-Venetian were also steady, leaving off at ¼ dis. American securities showed increased strength, and a rise took place in the shares of the Illinois Central and New York and Erie. There was no change of importance in mines. London and County Bank shares were firm, making 36¾, while Ottoman were dull. In miscellaneous descriptions, Electric Telegraph stock and Royal Mail Steam shares were quoted lower.

TUESDAY, July 31.—The railway market continued with a generally firm appearance, although in one or two cases, especially North-Eastern, a slight reaction took place. Most of the leading stocks, however, improved, particularly Midland, Lancashire and Yorkshire, and Great Northern. The A stock of the latter advanced 1½ per cent. Colonial descriptions showed little change, except some Indian stocks, which were quoted higher. Foreign railways were steady. Dutch Rhenish and Lombardo-Venetian improved, the latter closing at ¼ dis. to par. American railway securities were likewise firmer, and the shares of the Illinois Central advanced; New York and Erie shares, however, partially relapsed. A rise of ½ per cent. took place in Nova Scotia debentures. In mines, Cobre Copper improved to 47 to ½, on the announcement of the dividend. London and County Bank shares continued to be inquired for, the quotation being 36½ to 37¼. In miscellaneous descriptions, Victoria Dock stock declined 1 per cent; Victoria debentures, new, left off at 108¼, and Canadian Five per Cents. 101½.

WEDNESDAY, August 1.—In the railway market, the announcement of the proposed Midland dividend of 6½ per cent. per annum—a rate exceeding public expectation—caused a further general advance. Midland stock, in particular, opened 2 per cent. higher, at 126 to ¼, and ultimately went to 127¼ to 128, the rise, however, being in some degree due to the scarcity of this stock in the market. Other descriptions improved in sympathy, but in some cases experienced a partial reaction before the close. The market, however, remained very firm, partly from the near approach of the payment of the good dividends already announced, and partly from the prospect of even more satisfactory results in the present and more profitable six months of the year. In the colonial market, there was a better demand for Indian guaranteed stocks, and in several instances a rise took place. Great Western of Canada and Grand Trunk also improved. There was little doing in foreign shares, but prices were generally firm. American railway securities continued in good demand, and the shares of the Illinois Central and New York and Erie advanced. Mines were more dealt in, and in some cases closed higher.

THURSDAY, August 2.—The railway market experienced a further advance, but on some realisations a partial reaction took place. The market, however, still remained intrinsically firm, and the closing quotations were in most cases higher than yesterday. Colonial stocks were likewise stronger, especially Indian guaranteed descriptions, Great Western of Canada shares, and Grand Trunk; the latter closed at 30 to ½. Foreign railways were steady, except South Austrian and Lombardo-Venetian. A reaction also occurred in the shares of the New York and Erie. The only transactions in mines were in St John del Rey, at former prices; other adventures were rather flat. In joint stock banks, Ottoman Bank shares improved. In miscellaneous descriptions, Great Ship were dull, at 9s 3d to 9s 6d. There was again a fair demand for colonial debentures, and those of the New South Wales and South Australia Governments advanced.

FRIDAY, Aug. 3.—The railway share market opened this morning with decided firmness, but afterwards became weaker. Great Western of Canada Railway shares rose to 11⅞ to 12. Grand Trunk of Canada stock was likewise decidedly better. The Indian lines were steady.

"The temporary relief obtained by means of purgative medicines is purchased at the high price of the aggravation and of the perpetuating the disease."—HENRY, M.D.

NO MORE PILLS OR ANY other Physic.—For Constipation, Indigestion (Dyspepsia), Palpitation, Nervous, Bilious, and Liver Complaints, Debility, Dropsy, Epilepsy, Paralysis, Cough, Asthma, Consumption, Bronchitis, Sore Throat, Fevers.

DR BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD, which, at a few pence per day, saves fifty times its cost in medicine, and cures without purging or any of the uncertainties, annoyances, and ruinous expenses incurred by medicine, cod liver oil, or visits to distant climates.

Certificate No. 36,418.—We find it the safest remedy. Andrew Ure, M.D., F.R.S.; Dr Harvey; Dr Wurzer Dr Shorland; Dr Campbell.

We extract a few out of 56,000 cures:—

Cure No. 1,771.—Lord Stuart de Decies of many years' dyspepsia.——Cure No. 49,832.—"Of fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting." Maria Joly, of Lynn, Norfolk.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—The Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk, of indigestion and liver complaints.——Cure No 56,814.—Mr Samuel Laxton, Leicester, of two years' diarrhœa.——Cure No. 180.—Mr W. Reeves, 181 Fleet street, London, of 25 years' nervousness, constipation, indigestion, and debility.——Cure No. 4,028. Eight years' dyspepsia, nervousness, debility, with cramps, spasms, and nausea." Rev. John W. Flavel, Ridlington Rectory, Norfolk.——Cure No. 3,906.—"Thirteen years' cough, indigestion, and general debility." James Porter, Athol street, Perth.——Cure No. 58,314.—Miss Elizabeth Yeoman, Gateacre, near Liverpool, of ten years' dyspepsia and all the horrors of nervous irritability."——Cure No. 46,270.—Mr James Roberts, timber merchant, of Frimley, Surrey, of 30 years' diseased lungs, spitting of blood, liver derangement, partial deafness.

Similar testimonials from 56,000 patients who can be referred to.

The food is sold in canisters, 1 lb, 2s 9d; 2 lbs. 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs. 22s; 10 lbs, 35s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly; also at 60 Gracechurch street, 4 Cheapside, 330 Strand, 63 and 150 Oxford street, London; and all grocers and chemists.

HOLLOWAY'S PILLS AND OINTMENT.—Popular Celebrity.—In the annals of medicine no case can be found to parallel the unbounded fame attained throughout the habitable globe by Holloway's medicaments. In every climate, under every description of circumstance, have these wonderful remedies worked cures which are recorded in almost every known language. In using Holloway's preparations the sufferer runs no risk; their very nature necessitates their acting as purifiers and restorers. The innocent ingredients employed in their composition prevents the possibility of their doing harm or weakening the most delicate constitution. The whole chapter of ailments to which humanity is liable can be healed safely and certainly by these twin correctives, which, by the mildest means, expel all impurities from the body.

TO THE NERVOUS AND DEBILITATED

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration of Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12 3, and 6 till 8. Sundays from 10 till 1.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER 228 Piccadilly, London

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

Corner of MINORIES and ALDGATE, and Corner of NEW OXFORD STREET, and HART STREET.

Also Bradford and Sheffield, Yorkshire.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.

FREDERICK DENT, Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock of the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

DINNEFORD'S
PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

ICE, AND REFRIGERATORS FOR preserving Ice and cooling Wine, Butter, Cream, Water, Jellies, and provisions of all kinds, manufactured by the WENHAM LAKE ICE COMPANY (now removed to 140 Strand, W.C.), of the best make and at the lowest cash prices. No agents are appointed in London for the sale of the Company's Ice or Refrigerators. Pure spring-water Ice, in blocks, delivered to most parts of town daily, and packages of 2s 6d, 5s, 9s, and upwards, forwarded any distance into the country by "goods" train, without perceptible waste. Wine-coolers, ice-cream machines, ice planes for sherry-cobblers, freezers, moulds, &c. Detailed printed particulars may be had, by post, on application to the Wenham Lake Ice Company, 140 Strand, London, W.C.

HANDSOME BRASS AND IRON BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture Manufacturers 196 Tottenham court road W.

ALLSOPP'S PALE OR BITTER ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the March Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments.—

Messrs SAMUEL ALLSOPP & SONS

LONDON	61 King William st. City.
LIVERPOOL	Cook street.
MANCHESTER	Ducie place.
BIRMINGHAM	Upper Temple street.
DERBY	London road.
WOLVERHAMPTON	Exchange street.
CHESTERFIELD	Low Pavement.
STOKE-UPON-TRENT	Wharf street.
DUDLEY	Burnt Tree.
WORCESTER	The Cross
SOUTH WALES	King street, Bristol.
DUBLIN	Crampton quay.
CORK	Cook street.
EDINBURGH	Union street lane.
GLASGOW	St Vincent street
PARIS	279 Rue St Honoré.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Bottles and Casks, and on Draught, from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being especially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

The Brewery, Burton-on-Trent, April 30, 1860.

PIESSE AND LUBIN'S SWEET SCENTS.—FRANGIPANNI, KISS-ME-QUICK, WHITE-ROSE, and others from every flower that breathes a fragrance; in bottles 2s 6d each, or three in a case 7s. Sold by every Fashionable Druggist and Perfumer in all parts of the world.

Laboratory of Flowers, 2 New Bond street, London.

ALLEN'S PATENT PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand London

IMPORTANT NOTICE.
GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

S. W. SILVER AND CO. OUTFITTING WAREHOUSES, 66 and 67 CORNHILL, E.C.

Special Outfits for Australia, India, and China, for Naval and Military Officers, Cadets, Midshipmen, and Civilians. Clothing for Gentlemen's Home Use,—viz. Naval and Military Uniforms and Civilian Dress of the best Materials and Workmanship. Shirts, Hosiery, Gloves, &c. Ladies' Outfits. Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteaus, &c., portable and suited to all climates.

Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

SEQUELIN'S OIL.—This vegetable preparation is most successful as an instantaneous restorative, strengthening weak hair, opening pores of the skin, most effectual in the growth of hair, eyebrows, whiskers, and moustaches, &c., preventing its falling off, curing the scurvy, giving additional brightness, softness, and keeping its natural colour, and checking the most obstinate baldness in two months. One bottle is sufficient. Price one guinea. The money returned if not effectual. Sold by the Inventor, Sequelin, 40 Wharton street, Lloyd square, W.C., London. The most satisfactory testimonials and references on application.

DEANE'S TWO-HOLE BLACK PENS, which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of His Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchasar, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

A TOILETTE REQUISITE FOR THE SUMMER.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA, applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 22 Wellington street, Strand, W.C.

THE MORAL OF SYRIA.

If there is one lesson which we ought to have by heart by this time—which has been taught us more impressively and more expensively than any other in recent years—it is the necessity of sound theory and prudent action in our foreign policy, of wisdom in the adoption of our principles, and sagacity in the selection of our agents. Our international action should be distinct, else it has no force; it should be consistent, else it has no dignity; it should be based upon clear public interests and avowed moral aims, else it is at the mercy of popular whims and alternations—now governed by the hot fit of impetuosity, and now by the cold fit of reaction. If it be none of these things, it becomes vacillating, ineffective, and costly: we do nothing by the expenditure of strength and gold that might have sufficed to do everything; we purchase loss and disappointment at a price that ought to have brought us profit and success; we entail upon ourselves heavy obligations which we can neither disavow with honour nor fulfil with satisfaction; we surround ourselves with bitter foes, ungrateful friends, irritated allies, and feeble, troublesome, and worthless *protéges*.

Next to fixing the principles and objects of our foreign policy, the choice of diplomatic servants should be a matter of the most anxious and single-minded deliberation. They ought to be the very *élite* of our Civil Service. No other class of *employés* have half so much thrown upon them—are so constantly called upon to act on their own responsibility—require such consummate temper, sagacity, promptitude, and caution. No other class can do us so much harm, involve us in such risks, compromise so seriously our character, our safety, or our wealth. A stupid Ambassador, an irritable Consul, a meddling or conceited Envoy, an insolent or off-hand Naval Captain, may at any moment drag us into a quarrel in which thousands of lives and millions of money will be wastefully sacrificed. These representatives of England's power and honour are often at the antipodes: their distance virtually exempts them from control; their instructions must always be in a great measure (so to speak) conjectural, provisional, and vague; they must interpret these instructions according to the best of an imperfect judgment; they must often act without instructions at all. The cases which arise are frequently of the most delicate and intricate nature;—the men to be dealt with are often obstinate and touchy;—the agent of England has to consider when to yield, when to soothe, when to be firm, when to be menacing in language, when to be spirited in action;—he must shape his course according to his means, according to the character of his antagonist, according to the value of the question at stake. In a word, he must possess the most perfect temper, the most resolute courage, and the most penetrating sagacity;—and he must possess these rare qualifications on pain of gravely injuring the country which accredited him. And these gifts are the more necessary, because whatever he may do, or promise, or threaten, the Government at home, as a matter partly of generosity, partly of etiquette, partly of prudence and principle, invariably support him and back him up. To disavow a diplomatic servant is a thing almost unknown:—so that, in fact, he is endowed with a virtually absolute power of *pledging* Great Britain to peace or war—to alliance or to rupture—to whatever course his own fancy, caprice, or passion may have led him to inaugurate. Yet is it not the case that, as a rule, no appointments are so carelessly bestowed as our more distant Consulships; that in no branch of administration are intellectual and moral qualifications so little regarded, or family considerations so much, as in the junior departments of the Diplomatic Service; and that, even in the highest posts, Parliamentary considerations and connections weigh far more than special fitness or proved success, except in one or two of the most important embassies, where the perils and the requirements are too obvious to be overlooked? And what has been the consequence, in too many instances? How many wars, how much bloodshed, how many imbroglios, what untold sums in loans and taxes, do we not owe to corrupt or careless diplomatic or consular appointments. We do not wish to give offence or pain by citing cases, but no one acquainted with the Blue-Books of the last few years, bearing on transactions at Rangoon, Hong Kong, and Teheran, can be at a loss for exemplifications of our criticism.

There is another consideration yet which should urge us to employ our highest wisdom and statesmanship and our most sagacious administrative agents in our foreign policy. Every proceeding, every decision adopted, every system pursued, in international proceedings entails such endless and often such unforeseen consequences. When we have taken a line, entered on a war, perhaps concluded a peace, the affair is usually as far as ever from being ended. We have now before our eyes a most signal warning of this sort, in the Syrian trouble, which may prove—God forbid that it should!—the reopening of the vexed and vexing "Eastern Question." And perhaps the lesson is all the more impressive, that in this instance we have at all events no vacillation, haste, or want of consideration to reproach ourselves with. Here, at least, we have been deliberate and consistent. We have *always* insisted on upholding the Ottoman Empire. To hush up its decrepitude, to watch over its dangers, to guard it now against French, now against Russian interference and ambition, to patch its rotten timbers and keep it on its palsied legs, till the ripeness of time should bring about some feasible euthanasia,—this has been our persevering and thankless task for generations. In this we have never wavered. When six years ago we were called upon to act in this "Eastern Question,"—to determine whether we would leave Turkey to her fate, or prop her up once more, or accept her as a ward, or become a participator in her spoils, the country was yet more prompt, more posi-

tive, and more unanimous than the Ministry. After long months of negotiation, after the most deliberate reflection, after the suggestion of every possible contrivance, and the consideration of every possible alternative, we at length resolutely, though reluctantly, girded on our sword, and entered on one of the most gigantic and bloody wars of modern times. We joined with France, and nearly ruined Russia, in order to continue to Turkey a precarious, unhonoured, unprofitable existence. We spent twenty-five millions sterling and twenty thousand men; we caused and contributed to the expenditure in all of two hundred millions and of 250,000 lives;—not exactly with the definite object, but certainly with the probable and almost foresee-able result, of entailing upon ourselves vast future trouble and outlay, and of riveting still faster round our necks a ceaseless, burdensome, unprofitable, undischargeable obligation. Having saved Turkey from destruction, we became bound to compel her, and to enable her, to fulfil the proper functions of a Government. Observe we are not arguing that our decision then was wrong, but merely that it entailed future duties and necessities which, had we foreseen them, might well have disheartened and repelled us. We believed at the time that we were right; we incline to think so even now, when the heavy consequences are becoming apparent. For we had only the choice of three alternatives—one hopeless, one immoral, one politically dangerous and evil;—and like honest, foolish, unselfish Englishmen, we chose the first. We had to determine whether to save the insalvable, to maintain the unmaintainable, and to prolong the life of the incurable and the dying;—to let Russia absorb her best provinces and her richest inheritance; or to become ourselves sharers in the doomed inheritance. Morally, it was impossible to do the last; politically, it was impossible to do the second; physically, it was impossible to do the first. However, this was the least profitable and the least wrong of the three alternatives, and accordingly we resolved to attempt it.

The consequences are beginning to show themselves. The Ottoman Porte never did, and, as we are gradually learning, never can, perform the real functions of a civilised and settled Government. The character of the Turks, clenched and fossilised by their religion, is essentially fanatical. Now fanaticism can conquer, but it cannot govern—not, at least, in modern times and in complicated societies. Fanaticism will not learn, improve, progress, or change. Accordingly, the Turkish Administration, as we well know, is incurably corrupt, and what is worse, incurably feeble. It rules over millions of Mussulmen and millions of Christians; and can neither restrain the former, nor protect the latter. Yet the Western Powers of Europe, who kept Turkey on her legs, must compel Turkey to do her duty. The Christian Powers, who insisted on keeping vast provinces inhabited by Christians under Moslem rule, must protect those Christians against Moslem oppression and barbarity. The Turkish Government is too weak to do this—perhaps is too careless or too fanatical to wish to do it. Of course France and England must do it for them. One of the worst punishments of upholding a feeble or a bad Government, is that it entails the obligation of restraining its badness and supplementing its incapacity—in short of discharging its functions and doing its work for it. We upheld and sustained Turkey, and now we must govern Turkey and defend Turkish subjects. We must do this, or we must let France and Russia do it. We must send troops and ships to the Levant, though we have none to spare. We must involve ourselves in another joint military action with France, though we have had warning after warning against all such copartnerships. We must spend fresh funds in doing the duty of our incapable *protégé*, who is worth nothing to us but as a stop-gap,—while a China war, new fortifications, a reconstructed navy, and a daring Chancellor of the Exchequer, combine to drain us of our treasure! As we said at the outset, if there ever was a solemn exhortation to weigh every conceivable consequence of every act of foreign policy, we may read such lesson here.

THE FINANCES OF SARDINIA.

The part which the kingdom of Piedmont has recently played, and for some time seems likely to play in the affairs of Italy, would alone make her financial resources a matter of much interest. She will be called on to make many pecuniary as well as many military efforts, before she attains the place in Europe which she desires. This moment, also, she is endeavouring to raise a loan in the money markets of Europe; and we, therefore, make no apology for laying before our readers the best information as to her revenue and her expenditure that we can obtain.

The crisis of recent Piedmontese history is the revolution of 1848. Before that time she was an insignificant country under an absolute Government. She had little influence abroad,—she had a restrictive tariff at home. She had no claims on the attention of the world, and she did not make any. We all know how much of late all this has changed. Piedmont aspires to have an historical career. She struck a blow at Austria in 1848; she shared in the Crimean war while it lasted; she rescued Lombardy from Austria last year; she is more or less aiding Garibaldi at the present moment. From a quiet despotic State, Piedmont has become an enterprising free State. She avowedly hopes to become a Power in Europe, and to be sooner or later at the head of a united Italy.

An experienced person will expect to find many traces of this change in the finances of Piedmont, and we do find them. In 1847, the last year of the old state of things, the entire taxes levied on the Piedmontese population were only 3,813,452*l*, according to the estimate which Count Cavour made in January last. Those taxes will this year be 6,829,000*l*, exclusive of the newly-gained provinces, so that the immediate effect of the change in the policy of Piedmont has been to raise the burden of her taxation by 80 per cent. Her statesmen will justly convince her that she plays a glorious part, but her finances should warn her that she is paying a price for it.

Fortunately, the resources of Piedmont are increased by her new policy as well as her burdens. She has adopted not only a patriotic mission which is expensive, but also free trade, which is lucrative. Since 1848 her tariff has been modified in various ways, and the changes have steadily tended in a liberal direction. The result is shown in the extension of her commerce:—

	£
In 1854 her imports were only	12,497,160
In 1857 they were	19,123,040
In 1854 her exports were	8,595,280
In 1857 they had increased to	14,050,040

Of the commerce later than 1857 there is, we believe, no published account. The Austrian war may perhaps have had an unfavourable effect on industry which was so near its scene. But, on the whole, there is no doubt that free trade is producing its usual effects in Piedmont: it is enabling its inhabitants to turn their capital to the best account; it is steadily enriching them; it is strengthening them to bear the burdens which their patriotic ambition has imposed and is imposing upon them.

We shall see more distinctly the financial state of Sardinia by examining the following analysis of her Budget. The revenue for 1860 is estimated to be as follows, exclusive of the newly added provinces, of which we shall speak immediately:—

	£
Customs	2,411,824
Land tax, house tax, stamps and registry dues, &c.	2,940,284
Railroads and telegraphs	699,400
Post Office	242,000
Fees received at Foreign Office	12,400
Fees received at Home Office	21,136
Profits on some branches of public instruction	580
Mint	6,876
Miscellaneous	193,888
	6,528,388
Extraordinary resources	301,440
	6,829,738

The ordinary expenditure is estimated thus, also exclusively of the new provinces:—

	£
Finance department, including collection of revenue	4,331,676
Department of public justice	243,816
Foreign affairs	70,028
Public instruction	117,744
Ministry of the Interior	407,152
Public works	854,080
Military expenditure	2,229,464
Marine expenditure	310,360
	8,564,320

From which it appears that the deficit of the year 1860 will be considerable. But these figures do not show us how great

it will in reality be. We have also to provide for about a million and a half of extraordinary expenses, of which we have no account in detail, but which are certainly connected with the foreign policy of the country and the military expenses it has entailed upon her. Taking these into account, we have for the old provinces of Piedmont the following result:—

	£
Ordinary expenditure as above	8,564,320
Extraordinary expenditure	1,453,268
	10,017,588
Revenue as above	6,829,738
Deficit	3,187,850

which shows us how costly the great efforts of Piedmont for Italian unity and Italian independence have been, and how unequal her revenue, though it has increased so largely, is as yet to these peculiar and extraordinary efforts.

It is satisfactory, however, that, in appearance at least, the acquisition of Lombardy, &c,. will be profitable to Piedmont. The revenue and the expenditure of the new provinces, are estimated to yield a surplus. The account of what is expected from them is as follows;—

Revenue of New Provinces.	£
Customs	1,341,424
Land tax, house tax, stamps and registry fees, &c.	2,065,068
Fees to Ministry of Interior	92
Mint	10,888
Treasury	17,480
	3,435,552

Expenditure of New Provinces.	£
Finance	1,265,684
Justice	131,172
Public instruction	71,288
Ministry of the Interior	262,972
Public works	124,868
	1,855,984

showing a surplus of 1,600,000*l* available for the relief of the other provinces.

The account of the *present* kingdom of Sardinia, including the new provinces as well as the old ones, will, therefore, stand thus:—

		£
Expenditure of old provinces		10,017,588
Expenditure of new provinces		1,855,984
		11,873,572
Revenue of old provinces	6,829,738	
Revenue of new provinces	3,435,552	
		10,265,290
		1,608,282

This account is not a very flourishing one; especially it may seem if we take into account, as we must and ought, the certain fact that Piedmont is deeply engaged in further aggressive operations,—that she is endeavouring, more or less actively, to be at the head of a great Italian State. But though a superficial view of the figures may suggest unfavourable conclusions, a careful study shows that there is much which has an opposite aspect. We do not mean to allude to the favourable estimate which is formed of the revenue that will accrue from the newly annexed provinces. We would rather take the account of these provinces some years hence, when experience has tested it, and when we know by trial, not what a foreign despot *can* raise from them, but what a native constitutional State *will* raise. Nor do we attach much weight to future acquisitions of territory towards the South. These are possible—perhaps they are even likely. Possibly they may bring an increase of revenue. But in pure finance we should abstain from calculations which are based on many conjectures, and which many events many overturn. Our opinion is based on the internal condition of Piedmont itself. Its trade is rapidly increasing, as we have seen. It is now engaged in extraordinary efforts which might well be expected to try the pecuniary resources of a great State, even of a greater State than Piedmont. Probably, too, it is financially as well as politically at a critical epoch.

We think we perceive signs that it has arrived at the state in which a nation most rapidly augments its revenue,—the period at which an income tax on trade becomes possible. As yet this has not been possible. There is, we know, an *impôt personnel et mobilier* which already exists, and which has long existed; but this only yields a very trifling sum,—about 150,000*l*,—very different from what a true English income tax would yield in a country of increasing prosperity and wealth. And it is natural that it should be so. In the early stages of mercantile wealth it is not possible to tax it directly, for it would not yield enough to make it worth while. But Piedmont appears to have passed that period of commercial infancy. A direct tax on trade, it is true, involves certain moral virtues in the trader, which have certainly not been found as yet in any country on the Continent, But Piedmont is proving that she can be free, and it is reasonable to believe she has the substantial probity which is the basis of freedom. It is said in Piedmont that an income tax may soon be thought of there; and if it is, and if it can be worked efficiently, we should not argue so ill of her financial prospects as the figures given above would seem to indicate.

SOME SUGGESTIONS FOR IMPROVING THE ORGANISATION AND EFFICIENCY OF THE INTERNATIONAL STATISTICAL CONGRESS.

Last week we considered the general questions arising out of the design and labours of the recent meeting hore of the International Statistical Congress. We have now to offer some suggestions for increasing the efficiency of the procedure adopted by the Congress.

The plan of seeking to promote the cultivation of departments of knowledge by periodical gatherings—not in the same place, but in different places—more or less miscellaneous, of persons who take an interest in the particular pursuit, is one of the useful and successful innovations of recent years. The first leading example was furnished by the British Association for the Advancement of Science,—meaning by science, so far as the Association was concerned, physical science almost exclusively. The thirty years' career of that distinguished body has practically solved the somewhat difficult problem of obtaining continuous work and valuable results from the meeting once a year of a large number of persons, most of them personally strangers to each other, and drawn together so little by means of any rigid qualification, that full admission to all discussions and meetiogs has from the first depended merely upon the payment of a small fee. It fortunately happened, however, that at the outset of the enterprise the happy expedient was hit upon of dividing the general mass into five or six specific parts or sections, each charged with a special group of topics; and of placing at the head of each section a few men markedly eminent in connection with those topics. By this device, discussions which would have been impossible in the midst of the whole body became possible, practicable, and interesting. The strength, therefore, of the British Association lays in the vigour of its Sections, and in the skill and energy with which these sections are conducted,—and it is precisely in proportion to the degree in which all subsequent and similar bodies have perceived and adopted this *sectional principle** that the element of real work has been developed.

Great, however, as has proved to be the capacity and usefulness of the Sections of the British Association, there will be few of its regular members who will hesitate to acknowledge that this capacity and this usefulness would be very largely increased if to each section could not only be allotted a particular subject—Geology for example—but if further, there could be assigned by prior arrangement to *each annual meeting of each Section* some specified class of questions relating to its own allotted science. At present, no one can tell beforehand in what direction the inquiries or discussions of a section will run, and hence an absence of precision and preparation very often to be regretted.

Now the International Statistical Congress has to a large extent avoided this defect from the outset—for the founders of the Congress adopted as a fundamental rule, that while the principle of a *sectional* division of topics should be followed, there should also be for each section

* There are six sections at the meetings of the British Association, viz.: Mathematics and Physics—Chemistry and Mineralogy—Geology, Zoology, Botany, and Physiology—Geography and Ethnology—Economic Science and Statistics—and Mechanical Science. There are also six sections at the meetings of the National Association for Promoting Social Science, viz.: Amendment of the Law—Education—Prevention and Repression of Crime—Reformation of Criminals—Sanitary Science—and Social Economy. At the recent meeting in London of the International Statistical Congress there were also six sections, viz.: Judicial Statistics—Sanitary Statistics—Industrial, Agricultural, and Mining Statistics—Commercial Statistics—Census Statistics—and Statistical Methods.

a Programme prepared, printed, and distributed beforehand, not merely setting forth the mere heads of the business to be brought forward, but presenting to the section a preliminary survey and discussion of the scope and design of the questions to be considered. These programmes have generally been prepared by persons reasonably competent to take a leading part in the discussion of the subjects referred to them. There have of course been great inequalities in the execution of a series of papers so extensive; but as the general result it may be affirmed with much truth, that it is to the efficiency of the programmes that a large part of the real usefulness of the several meetings of the Congress may be attributed. In those cases where the programmes have been carefully prepared with a view to placing the questions desired to be raised in a specific and comprehensive form before the section concerned, the debates have been, as a rule, systematic and useful, and the results positive and clear.

It seems to us, therefore, that as regards the Statistical Congress, the object to be kept most constantly in view is the improvement still more of the present excellent plan of sectional programmes prepared and distributed in ample time before each meeting. We are quite sure also, that if the same practice could be introduced in some form or other into the British Association, and the Association for Promoting Social Science, the favourable results would be speedy and decisive.

It happens, however, with the Statistical Congress, that while its arrangements of sections and programmes present plans for imitation, its method of working out these plans is seriously defective. In the British Association the whole working hours of each day are assigned to the sections, and the proceedings of each section as regards its own labours and discussions are final. There is no appeal from the section to the general miscellaneous body of members. But with the Statistical Congress the practice is to abridge the work of the sections to half the working hours, and to consume the other half in desultory discussions in the midst of the entire body of persons assembled. In other words, decisions are reported from select numbers of persons who have patiently considered all the bearings of the case, to a loose fluctuating meeting who have not heard the arguments, and have not time to consider the particular point brought forward. The chief evil entailed by this unfortunate plan is great waste of time, but sometimes it leads to ultimate decisions more hasty than defensible.

Another defect also is the reception from each of the Foreign Delegates of what is called a report of the progress of statistical inquiry since the preceding Congress in the country he represents. For practical or scientific purposes these reports are generally of small value. The better plan of dealing with them would be to establish a distinct section for the reception and discussion of International progress reports, and to seek, by means of a careful preliminary programme, to impart some degree of scientific uniformity and precision to the documents to be sent in. At all events, the present unprofitable expenditure of the latter half of the working day should be at once corrected. Following the example of the British Association, it is probable that one or two general meetings might be held for the delivery of discourses on some assigned topic of interest. But the purposeless speeches and the offensive frequency of mutual compliments which disfigure the general miscellaneous meetings should be abated with a vigorous hand, as blemishes discreditable in themselves and full of danger.

But supposing all these reforms to be adopted, the Statistical Congress would have still to contend with a difficulty of the gravest kind. The meetings take place in alternate years. But during the intervening two years the organisation is practically dissolved. There remains in force no competent central power qualified and bound to watch over the progress of inquiry during the interval, and vigilant to promote the fulfilment of the recommendations adopted at the former meetings. But if the meetings are to be really efficient, there must be systematic preparation during the period of time which separates them. We may seem to treat the matter in over-serious a spirit, and to convert into business something which is taken up for pleasure. Our reply is, that if the pretensions put forward are intended to bear a serious meaning, the enterprise must be dealt with as a reality and not as a toy. The intention is to advance our knowledge of a most important and difficult class of questions relating to human societies—and unless the whole proceeding is to provoke ridicule, the means adopted must be such as will produce solid and valuable results—and solid and valuable results can only be the results of labour and contrivance. Those who will not comply with the conditions should not intrude themselves into the enterprise.

Probably the best place for the establishment of a central committee would be Brussels. Hamburg would in some respects be preferable, but on the whole would not be so eligible as the Belgian capital. One or two leading men could be found in Brussels to form the committee, and there could also be found there a man with the needful accomplishments as a linguist and statist, who, in return for no very extravagant honorarium, would act as central secretary of the Congress between its meetings. The needful funds would be provided, as in other similar cases, by a small membership fee, and by the sale of reports and programmes. In other respects, the present plan of bearing the expenses of the meetings may for a time at least be continued.

We have gone somewhat out of our usual path for the purpose of considering the questions herein adverted to. But we have had the less hesitation in doing so, because we recognise in the British Association, the Statistical Congress, and the Social Science Association, at least the rudiments of one of the most powerful methods hitherto suggested for the vigorous prosecution of branches of inquiry most vital to human welfare. It is too much the custom in such societies to contract a habit of obstructive complacency. The casual visitors see too little to understand the whole. The regular attendants become intensely conservative of everything which familiarity has made easy to them. The meetings occur but once a year, and last only a week; imperfections, therefore, however apparent, are felt but for a short time, and hence it is that suggestions such as we now offer, not in any hostile, but in an eminently friendly spirit, may perhaps be of service.

FRENCH TAXATION.

II.

The second main division of taxes levied in France is called *enregistrement*, and answers in the main to our stamps, but has even a wider grasp. In the first place, under the title of "Registry properly so called," an impost, varying (when fixed) from 1f to 25f, and (when proportional) from one to ten per cent., is placed upon every legal, quasi-legal, or administrative act or proceeding which requires to be recorded by any clerk of court, *huissier*, or *greffier*, or notary public;—and, as nearly every proceeding in a Frenchman's life is taken cognisance of by the judicial or executive authorities in some form or other, we need not be surprised that this fiscal contrivance should prove a productive one. Certificates, notices, affidavits, authorisations, powers of attorney, legitimation and adoption of children, marriage contracts, agreements of every sort, wills, gifts, declarations of majority, partnerships or dissolutions of partnership, summonses, briefs, *procès-verbaux*, sentences, rents, checks, receipts, purchases and sales, and a host of other acts are obliged to be *registered* and thereby taxed.

Besides this, a stamp duty is levied upon many of these same transactions, by requiring that the registry shall be recorded on stamped paper. This is technically called the *timbre*. Journals, advertisements, pamphlets, and most legal documents are subjected to this tax. The estimated produce of *registration* in 1860 is 285 millions of francs, and that of *timbre* (or stamps) 53 millions.

III. The third fiscal division of French revenue, includes the national domaines, forests, fisheries, &c. Part of this is managed by the Registration Department: the entire proceeds reached this year upwards of 58 millions of francs.

IV. The fourth head consists of Customs duties. The mode of levying these duties is very similiar to the English practice: nearly the same formalities have to be observed, and a corresponding warehousing system to our own prevails. The entire produce is about 200 millions of francs. The French tariff, as is well known, is far more protective and prohibitive than our own, and of course far less productive. Their receipts from this source are only *four* millions where ours are *twenty-four*; but it must in fairness be borne in

mind that a great portion of the tobacco and sugar which yields our custom houses so large an annual sum, is with our neighbours grown at home, and subject therefore to the Excise Department; and that they import scarcely any wine, and very little spirits. But the whole purpose and aim of the French tariff is not revenue, but protection to native produce. It retains also three characteristics which we have long abandoned. They levy a small export duty on most articles, which yields in the aggregate about 3,800,000 francs; —they give a bounty on the exportation of several articles, which costs them annually 35,000,000 francs;—and they levy not only differential duties on the tonnage of French and foreign ships, but also differential Customs duties on all articles according as they are imported in French or foreign bottoms, and directly or not from the country of production.

We shall speak in a future article of the French Excise—or, as they call it, *contributions indirectes*—for it well deserves a paper by itself. The minor heads we may pass over with one remark. Their *Post Office* brings them in 60 millions of francs, and costs 43 millions. Ours brings in 3,310,000*l*, and costs about 1,905,000*l*. Our net revenue from this source, therefore, is 1,405,000*l*, and theirs only 680,000*l*.

The cost of collecting the different branches of the revenue in France is as follows:—

Contributions directes	4.6	per cent.
Enregistrement et timbre	3.75	—
Customs and Excise	16.5	—
Forests and fisheries	20.0	—

NEW STAMP BILL.

A New Stamp Act, completing the one brought in and passed some time since, has now been introduced into the House of Commons, and at this period of the Session will probably pass rapidly. We hasten, therefore, to give a full analysis of its provisions, as many of these provisions affect men of business; and if they can point out errors or inadvertencies in them, it is better they should do so now when they may easily be altered, than hereafter when they have become law. The schedule is as follows:—

Award in England or Ireland, and Award or Decreet Arbitral in Scotland:—

	£	s	d
Where the amount or value of the matter in dispute shall not exceed 50*l*	0	2	6
And where it shall exceed 50*l* and not exceed 100*l*	0	5	0
And where it shall exceed 100*l* and not exceed 200*l*	0	10	0
And where it shall exceed 200*l* and not exceed 500*l*	0	15	0
And where it shall exceed 500*l* and not exceed 750*l*	1	0	0
And where it shall exceed 750*l* and not exceed 1,000*l*	1	5	0
And where it shall exceed 1,000*l*, and also in all other cases not above provided for	1	15	0

Contract Note.—Any note, memorandum, or writing, commonly called a contract note, or by whatever name the same may be designated, for or relating to the sale or purchase of any Government or other public stocks, funds, or securities, or any stocks, funds, or securities, or share or shares of or in any joint stock or other public company, to the amount or value of 5*l* or upwards 0 0 1

Lease.—Any assignment or surrender of a lease or tack for a term of years exceeding thirty-five, upon any other occasion than a sale or mortgage ..... A duty equal to the ad valorem duty with which a similar lease or tack would be chargeable, but no higher duty than 1*l* 15*s* shall be charged.

Policy of Assurance or Insurance, by whatever name the same shall be called, whereby any sum of money shall be assured, or agreed to be paid only upon the death of any person, from or by reason of any cause incident to or consequent upon travelling, whether by land or water, or any accident or external violence, or any cause whatever other than a natural cause; or whereby any compensation shall be assured or agreed to be made or paid for personal injury received from any cause whatever; or whereby both a sum of money upon death and a compensation for personal injury as aforesaid shall be assured and agreed to be paid, or whereby any assurance or insurance shall be made upon glass from loss or damage of any kind except by fire,

	£	s	d
Where the premium or consideration for such assurance, insurance, or agreement shall not exceed two shillings and sixpence ...	0	0	1
And where the same shall exceed two shillings and sixpence and shall not exceed five shillings	0	0	3
And where the same shall exceed five shillings, then for every five shillings and also for every fractional part of five shillings	0	0	3

Promissory Note made in the United Kingdom for the payment of any sum of money exceeding 4,000*l*,

For every 1,000*l* or part of 1,000*l* of the money thereby made payable	0	10	0

Foreign Promissory Note made or purporting to be made out of the United Kingdom for the payment within the United Kingdom of any sum of money ..... The same duty as on an Inland bill of exchange for the payment otherwise than on demand of money of the same amount

The stamp on contract notes is to be adhesive, and to be cancelled in a manner which is prescribed.

With respect to the tax on policies of life and other kinds of assurance, there is the following attendant provision:—

"VII. Where any insurance in respect of which a policy "or agreement is chargeable with stamp duty under this "Act shall be renewed or continued on the payment of fur- "ther premium or consideration, whether in pursuance of "any stipulation in the policy or agreement or otherwise, "a receipt for such further premium or consideration shall "be given by the person who shall receive the same, and "such receipt shall for the purposes of this Act be and "be deemed the policy or agreement for such renewed or con- "tinued insurance, and be chargeable with the duty by this "Act granted; and if any person shall receive any money for "premium or consideration for any such insurance, and shall "not within *a month* make out, and, if required, deliver a "duly stamped policy or agreement in respect thereof; or in "the case of a renewal or continuance of such insurance, "shall not thereupon give such receipt as aforesaid duly "stamped; or if any such person shall deliver, or cause to "be delivered, any policy or agreement, or give, or cause to "given, any receipt not duly stamped, he shall forfeit the "sum of *twenty pounds;* and where the insurance shall be "made, renewed, or continued by or for any society or "company, the person who shall be a managing director, or "the secretary or other principal officer thereof, at the time "of the payment of any such premium or consideration, and "of any such default or unlawful act being done or suffered "as aforesaid, shall be held and deemed to be a person "doing or suffering the default or unlawful act, and shall, "as well as the society or company, and the members "thereof who may by law be chargeable therewith, be sub- "ject and liable to the said penalty in respect thereof."

This clause is not very well worded. It may be taken to mean that at every payment of a premium in a life policy a duty is to be paid, but this is not, we apprehend, the construction intended. The case in which a policy is *continued* for the purposes of this section are those in which a new agreement is made,—as, for example, when a man first insures his life for five years, and then continues it for an additional term; but the words are not so clear as they should be.

The provisions respecting promissory notes are intended to assimilate them as far as possible to the existing law respecting bills of exchange.

There are some other provisions which would not be expected from the schedule.

The stamp on an agreement may in future be adhesive under the following provisions:—

"XI. The stamp duty of 6d by the Act of the present "session of Parliament, chapter 15, charged on an agree- "ment under hand only may be denoted by an adhesive "stamp in any case where the same is capable of being used "under the terms and restrictions hereinafter mentioned; "and the Commissioners of Inland Revenue shall provide

"stamps for the purpose; and whenever any such adhesive "stamp shall be used, every party to the agreement who "shall sign the same, shall also at the time of so signing "write upon or across the stamp his name and the date of "the day and year of writing the same, so that the stamp "may be appropriated to the instrument, and effectually "cancelled and rendered incapable of being used for any "other; and in default thereof the stamp shall be of no "avail; and proof of the said writing upon or across the "stamp, as hereby required, shall be a necessary part of the "evidence of the agreement in any case where such agree-"ment is not stamped with an impressed stamp.

The stamp on a delivery order is to be paid by persons requiring the order.

The following two clauses will facilitate the business of *Bankers*:—

"XVII. Where any draft or order for the payment of "money by any banker or person acting as a banker, charge-"able with the stamp duty of one penny, shall come to the "hands of such person unstamped, it shall be lawful for "him to affix thereto the necessary adhesive stamp, and to "cancel the same in manner by law required, and upon so "doing to make the payment thereby directed, and to charge "the duty in account against the person who ought to have "paid the same, or to deduct such duty from the sum so "directed to be paid; and such draft or order shall, so far as "relates to the stamp duty chargeable thereon, be good and "valid; but this shall not relieve any person from the lia-"bility to the penalty he may have incurred by issuing the "said draft or order unstamped.

"XVIII. Whereas by the eighteenth section of the Act "passed in the fifty-fifth year of the reign of King George "the Third, chapter one hundred and eighty-four, the "issuing of promissory notes payable to bearer on demand "with printed dates therein is prohibited, and such prohibi-"tion is an unnecessary restriction: be it enacted, that the "said section of the said last-mentioned Act shall be and is "hereby repealed."

INDIAN FINANCE.

[Continued from the letter dated June 4th, printed in our impression of 28th ultimo.]

TO THE EDITOR OF THE ECONOMIST.

Calcutta, June 17, 1860.

Sir,—In my last letter I described to you the main provisions of the Income Tax Bill and of the Licence Bill, including the licence of tobacco dealers. Since that date the Bills have been under the consideration of the whole Council; and after the usual period of legislative incubation, the Bills will be hatched, and the fledglings will come forth to try the strength of their wings in the atmosphere of practical experience. It is generally expected that the report of the Select Committee of the Council will be accepted by the Council with little, perhaps no alteration. Perhaps the legal members may polish up some of the details. But it is to be earnestly hoped that no technical phraseology may be allowed to creep into the Bills, which, without giving any real precision, would only serve to puzzle the tax-gatherers and bewilder the tax-payers. The wording of the English Income Tax Acts perpetuates the abstruse yet obscure phraseology which prevailed at the period when Pitt introduced the income tax. The Indian Bills are simply yet accurately worded, and clearly arranged. Inasmuch as representative members for Bengal, Madras, Bombay, and the North-West Provinces, assisted Mr Wilson in Committee, the public may be sure that in framing the Bill regard was had to the requirements of all parts of India.

In connection with the new taxes, the great event of the fortnight has been the recall of Sir Charles Trevelyan. The Home Government is generally considered to have acted with great promptitude in this matter. It appears by a comparison of dates, that the Ministry must have recalled Sir Charles almost immediately after receiving his protest minute, and his avowal of having published the said minute; so that he must have been condemned upon his own showing. And the arguments which were expected to be so convincing, produced the very opposite effect, and recoiled upon their author. Among the European community in the Bengal Presidency the recall has not created any sensation. It was, indeed, confidently expected. But there is a general feeling of regret that Sir Charles Trevelyan's Indian career should have thus closed. High hopes were entertained of him by many. He paid much regard to public opinion, and was desirous to conciliate the non-official classes. And, on the whole, he *was* a popular man among his own countrymen. His published minutes usually breathed a spirit of progress and improvement. And everything he did was stamped with the unmistakeable impress of zeal and activity. And it was generally believed that he combined English enlightenment with Indian experience. Thus it is that many who most maintain that his recall was necessary, are among those who feel the most regret, or indeed sorrow, at the occurrence of that necessity. Among the natives he certainly was a popular Governor, and his reputation with them has extended far beyond the Madras Presidency. His name is probably as familiar to the upper classes of natives at Calcutta as it can possibly be at Madras. The affair with the Tanjore Ranees did no doubt temporarily tarnish his reputation with certain classes of natives. But the effect with them was probably not so great as the advocates of the Ranees would lead the public to believe. Be that as it may, the natives will now consider that Sir Charles Trevelyan has fallen a victim to his anxiety to save their pockets from certain disagreeable taxes. The consideration that these rich Bengalees scream with agony when they feel even the touch of the tax-gatherer, that they are unwilling to contribute anything to the Government under whose shadow they have grown rich, does somewhat destroy the charms of their admiration of Sir Charles Trevelyan's conduct. The British Indian Association, consisting of native gentlemen, have voted Sir Charles a laudatory address. We have not heard yet how the Madras people have regarded the event. But probably we shall soon hear of valedictory addresses, both from natives and Europeans. Thus closes the Madras episode in the financial drama of India.

It is believed that the new Governor of Madras, Sir Henry Ward, will prove himself efficient in the carrying out of the new measures, and that opposition at Madras will gradually subside. The accounts from the North-West are good; whatever excitement there may have been seems to be passing away. The new taxes are being quietly collected in Oude; and all is reported well in the Punjab. So that, in the course of a month or two, the new taxes will have made a fair start.

The Bengalee Press maintains still a very discontented and sometimes an improper tone. Their lamentations, however, afford no ground for apprehension.

Pending the introduction of the new taxes, efforts continue to be directed towards reduction of expenditure and financial reform. In former letters I stated generally the extent to which military expenditure had been reduced. The Madras reductions have since then been vigorously carried on. And further reductions in Bengal seem possible;—among others, the Punjab military establishments appear likely to be reduced. The Military Finance Commission continues to work on; but the system of a centralised financial control in the military departments, which has been under contemplation, has not yet been announced. A plan of this kind will certainly effect a great saving, and will harmonise well with the other financial arrangements in contemplation.

The civil charges (as contradistinguished from military) are, however, found to have increased, and to be still increasing. Much of this is, doubtless, owing to the improvement of the country, and the expansion of our institutions. And whenever inquiries have been made (as, for instance, Mr Rickett's inquiries) into the scale of civil establishments in India, undue parsimony rather than extravagance has been discovered. Mr Rickett's elaborate and excellent inquiry ended in a recommendation for an increase to the aggregate of establishments instead of a reduction. This rather pertinent fact does not augur well for the success of the new Civil Finance Commission which is likely to be appointed. In the large class of contingent charges there doubtless will be found room for reduction. And the police charges, which have increased more than any other charge since the mutinies, *must* apparently fall under stern shears.

There is to be a Budget for the year 1860-1, showing the probable income, and appropriating specific sums for each service in every department of State, after the English model; but as yet there are no signs of its appear-

ance. A Budget is like an almanac, which ought to come *out early in the year* to be of practical use.

It is hoped that the form and manner in which the new audit for the whole Empire is to be carried out may soon be determined. The existing Indian system of public accounts is in many respects far from primitive. There *is a concurrent audit* month by month in all civil departments. And the manner in which the military paymasters submit the monthly estimates of their disbursements for sanction, and then obtain credits on the local treasuries, does very much accord with English principles. But, then, there is not, and never has been, anything like specific appropriation for particular services. And, on the whole, the Indian system, though in many respects right enough, is yet disjointed, and is never formed into an harmonious whole. The various threads of accounts are never gathered together. What we want is one Central Audit Department, which would *enforce* the appropriation of specific sums as ordered by the Budget, and rigidly prevent any excess over what is sanctioned. Such a department would resemble partly the Audit Board in London and partly the Court of Accounts at Paris. At the end of the year it would present one general account to Government, showing the amount sanctioned and expended in the various provinces and the various departments. In this way, reliable financial data would be prepared in a uniform manner. At present no two accounts of the same department or the same province ever agree. None can say whether the territorial accounts presented to Parliament are really correct; and the discrepancies which constantly arise are most perplexing. Until an Imperial audit shall be organised, no trustworthy balance sheet of the Empire can ever be prepared.—I am, yours truly,

R. T.

ANOTHER INDIAN LOAN.

In the House of Commons, on Thursday, Sir Charles Wood gave notice that, on Monday next, he intends to move a resolution empowering the Secretary of State for India to raise a loan in this country of 3,000,000*l*. This announcement has had no important influence upon the market for public securities.

THE WINE DUTIES.

Annexed is the resolution proposed on Monday by the Chancellor of the Exchequer and agreed to by the House. It was a resolution of adjustment, and provided for a relative increase of the duties on the stronger kinds of wine, in consequence of the increase on spirits. The resolution was as follows:—"That in lieu of the duties of Customs chargeable on the articles undermentioned on and after the 1st day of January, 1861, the following duties of Customs shall, on and after that date, be charged thereon on importation into Great Britain and Ireland, and without any allowance for drawback, viz.:—

	Containing less than the following Rates of Proof Spirit, verified by Sykes's Hydrometer, viz.,				If imported in bottles & containing less than 40 degrees
	18 deg.	26 deg.	40 deg.	45 deg.	
	s d	s d	s d	s d	s d
Wine of or from foreign countries—					
Red, the gallon	1 0	1 9	2 5	2 11	2 5
White, the gallon	1 0	1 9	2 5	2 11	2 5
Lees of such wine, the gallon	1 0	1 9	2 5	2 11	2 5
Wine, the growth and produce of any British Possession—					
Red, the gallon	1 0	1 9	2 5	2 11	2 5
White, the gallon	1 0	1 9	2 5	2 11	2 5
Lees of such wine, the gallon	1 0	1 9	2 5	2 11	2 5

Agriculture.

LANDLORD AND TENANT.

THE BUCCLEUCH LEASES.

The unfavourable character of the present season, which has been disastrous to many farmers, and most expensive and trying to all, brings strongly into notice the hazards attending their business, and the absolute necessity that they should hold their farms for long periods to enable them to obtain fair returns for their outlays and exertions. The absence of leases has long been felt to be one of the great obstacles to agricultural progress in England, and the general practice of granting 19 or 21 years' leases which prevails in Scotland, has confessedly given the Scotch farmers advantages over their English brethren far more than compensatory for the inferiority of the climate North of Tweed. We learn, however, that in Scotland, on the estates of the Duke of Buccleuch in the counties of Roxburgh, Selkirk, and Berwick, leases of only nine years' duration are in use, and that, as might have been expected, the farmers living under that *regime* do not improve their farms as, under favourable circumstances, they ought to do. This fact was noticed at a recent monthly meeting of the West Teviotdale Farmers' Club, where the chairman, Mr Wm. Aitchison, himself tenant of one of the Duke's farms, said:—"Mr Simson very kindly endeavoured to compliment the hill farmers on their management, though he rather hesitated to do so. If they did not improve so much as they ought to do, however, the fault did not lie with them, *but with the short leases under which they held their farms.*" And then in reply, Mr Simson afterwards remarked:—"He had not tried to flatter the hill farmers. No class of men had shown a greater desire for improvement than they, *but they were hampered by their short leases of nine years.*" The discussion of which these remarks formed a part was published in the *Hawick Advertiser*, and so came under the eye of Mr W. Ogilvie, the Duke's factor. Thereupon he indited an epistle to Mr Aitchison, which, had it been addressed by any one but the landlord's agent to a tenant-farmer, would have been deemed simply impertinent, but which must be taken as indicating the very erroneous principles on which landed property in this country is attempted to be managed. We say "attempted" to be managed, because there is such an obvious inconsistency between the means used and the end sought, and so much of confusion both as to the means and the end, that the system under which such estates are dealt with scarcely deserves the name of management. The Duke's agent commences by referring to the newspaper report, then quotes the passages we have cited, and accepting them as alluding to the Duke's stock farms, says:—"I do not consider the view you have taken to be correct, and that it is unjust and unfair to his Grace to assign as the reason for 'the tenants not improving their farms so much as they ought to do' the one which you have done. Not to go further than yourself, for example, you and your father before you have together continuously occupied your present farm for a succession of six or eight leases of nine years' endurance, and I would ask you if nine years' leases, under such circumstances, ought to operate, or do operate, as a barrier to a tenant's improvement, or if, in point of fact, they have prevented you from improving your farm 'so much as you ought to have done'! I am quite sure you will not say so, and I am confident there is not a tenant of his Grace's who was present at the Club of that day would say so." Now this is just the old fallacy of which we have occasionally heard so much in England, viz., that some farmers, and even good farmers, do occupy, for many years, farms on estates where no leases, or only short leases are granted, and whereon even sons succeed to fathers as tenants, *therefore* that short leases or yearly holdings do not prevent the tenants on such estates from improving their farms. Then the agent, following the usual course of such arguments, goes on to say:—"It is very convenient, no doubt, for a tenant who has neither enterprise nor inclination to improve his farm, to make the shortness of his term an excuse," and adds, that there are tenants on the estate who have improved extensively, though only possessed of nine years' leases. But how can any one say that the want of enterprise and inclination to improve in the bad farmers whose existence is hinted at has not been caused by their short leases? Or who will affirm that the good farmers would not have improved much more had they the guarantee of longer leases? To say the least, the facts asserted by the agent,—if facts they be,—prove nothing.

Next, the agent uses the "lucky accident" argument, saying: "True, there may be cases in which it might be imprudent for a tenant to expend a large capital on improvements on a lease of nine years." And why? Because the Duke of Buccleuch's tenants "have a landlord who, it is well known, never refuses, on a tenant being obliged to leave his farm, to make a fair remuneration for his outlay, or any improvement he had not reaped the benefit of." Now such allowances are essentially eleemosynary in character, they may be given or withheld at the sole will of the landlord, what is or is not a "fair" amount is entirely in his discretion, and, though the Duke may be, and probably his intention is, all that his agent alleges, he is but a lucky accident, and a farmer would certainly not be a prudent man to expend his capital in reliance upon receiving such discretionary allowances.

And, after all, the Duke's generosity is not quite so guileless and disinterested as his agent would seem to insinuate rather than to say, for he adds:—"While I am of opinion that a tenant ought to be entitled to such remuneration, I also think that a proprietor is equally entitled to a periodical increase of rent in proportion as the value of his land becomes greater, *by the development of its capabilities, and the advancement of national prosperity.*" This simply means that the Duke prefers to raise his rental once in nine rather than once in 19 years, where the farms have become of increased value by means of the tenant's capital, or by, what has hitherto been, the uniform progress of national wealth and population. But may he not be grasping at the shadow and losing the substance? Does the Duke or his agent suppose the farmer who embarks in a stock farm does not calculate on the "development of its capabilities" through the agency of his own capital and the advancement of general prosperity? And may not

such calculations justify improvement under 19 years' leases, which would be absolutely foolish if undertaken under nine years' leases? And let it be remembered that the risk is wholly on the side of the tenant-farmer. During the currency of a short lease he may have a considerable number of bad seasons, so that though the capabilities of his farm may have been developed at the expiration of the term, he may not have received any benefit, or any equivalent benefit from his outlays, yet the landlord is to have the opportunity of increasing the rent. Again, the advances of national prosperity may not be so uniform as they have been of late years; the nation may stagger, industry may be partially or temporarily paralysed under the crushing taxation which panic fears and sinister interests have of late combined to impose on our community, and at the expiration of his short lease, the farmer's capital may be realised and withdrawn during a period of general stagnation or depression, and that although he had not time to avail himself of a previous period of prosperity.

All our previous remarks have been made upon a general view of the subject; but it appears from Mr Aitchison's reply that, notwithstanding his agent's assertions, the Duke's estates are not exempt from ordinary economical laws. It seems, however, that the agent had in the meantime published his letter, which was probably intended as a sort of warning to some of the less independent tenants not to comment too freely on the Duke's management.

Mr Aitchison, in his reply, admitted his long personal and ancestral connection with the Buccleuch estate ought to strengthen his gratitude and confidence in the continuance of the possession he held, but he addded: "I cannot forego the opinion I have under no circumstances shrunk from publicly expressing, that I consider short leases, *under whomsoever they may be held*, tend to discourage improvements.....This is an opinion I feel confident is entertained by a largo majority of the agriculturists of Scotland, and [the system of 19 year's lease] has often been advanced as a reason why our rural improvements are so much in advance of those of England, where there is hardly any security of tenure, though many of the large proprietors have, like the House of Buccleuch, been characterised from age to age for their liberality and kindness to their tenantry." Yet all this boasted "liberality" results in keeping the tenants in a state of helpless, and in many cases of hopeless, dependence, and excluding from contracts for the occupation of agricultural land the even-handed stipulations which are found essential to the security of both parties to all other contracts.

HORSE EXHIBITIONS.

DEFECTIVE RAILWAY ARRANGEMENTS.

Everybody must be struck with the manifest inferiority of the show of horses at the meetings of the Royal Agricultural Society, except when such meetings take place within horse-breeding districts. In Yorkshire the show of hunting and coaching horses could not be surpassed, while the local exhibitions in Suffolk produce such displays of agricultural horses as can never be seen elsewhere. Now the Royal Agricultural Society's meetings are always held in places well supplied with railway communication, and when we saw at Canterbury the great numbers of Shorthorn, Hereford, and Devon cattle which were sent from the distant parts of our island, we may be inclined to inquire why horses are not also sent from Yorkshire, Suffolk, and other distant horse-breeding counties? We are told, too, that great facilities are afforded by the railway companies for the express purpose of accommodating the exhibitors of stock at the Society's shows, and a formal vote of thanks to the companies therefor forms part of the regular proceedings of the Society's dinner and annual meeting.

Now, however, it appears from a letter adressed by Mr John Taylor, of Peterborough, to the *Mark Lane Express*, that the accommodation afforded by the railway companies, so far at at all events as regards horses, for taking stock to the annual shows of the Royal Agricultural Society, is entirely illusory. To offer the owner of a valuable horse the option of sending his horse in an open truck by a luggage train, at a low rate of charge, is really offering him no facility at all. Cattle may travel in that way without injury; they are comparatively placid and unexcitable, and if supplied occasionally with a little hay and water, may be some time on their journey with little inconvenience. But the horse is a nervous and excitable creature, and requires when sent by railway to be closely shut up in order to avoid injury.

We remember to have noticed that Dagobert, the first prize hunter-sire at Canterbury, had several fresh wounds and scratches on his fore and hind legs, and we were told by his groom that those injuries had been done in the railway carriage; but it never occurred to our mind as possible that such a horse had been sent to Canterbury in an open truck by a luggage train! Mr Taylor now tells how the railway companies manage, or rather mismanage these things. He says:—"Railway companies profess to carry horses to and from the show free, but with this proviso—that they can only be conveyed by the 'ordinary goods and cattle trains.' If an exhibitor of a stallion applies for a horse box, he is told by the railway authorities that 'horse boxes are not sent by goods trains,' that being a standing order of the company, but that if he wishes to take advantage of the arrangement made between the railway company and the Agricultural Society, he must put his horse into an open cattle truck, and it will then be forwarded by a goods train. If, however, he desires to have the horse put in a box, he can do so, and it will be sent on by passenger train, and then he must pay a charge of 6d per mile there and back." Now and then, as a special favour, an exhibitor is allowed to send his horse in a horse box, still however to be forwarded by the ordinary goods and cattle trains. "But those trains stop at every station 'to shunt' off trucks and take up fresh ones; and when you consider that this shunting process is not done in the most gentle manner, and that the common trucks have not elastic buffers, you can easily imagine in what state a horse would come out after travelling 200 miles in this way, having been 'shunted' backwards and forwards at perhaps 40 or 50 stations." Everybody knows the length of time occupied by a goods train in travelling that distance, during the whole of which a high-spirited and high-conditioned horse, even should he be in a horse box, must necessarily be kept in a state of great nervous excitement. If travelling in an open truck, the wonder is how such a horse can ever arrive safely at his journey's end.

Under these circumstances, it can be no matter of surprise that very few valuable horses are sent long distances to the Society's shows. To pay 6d a mile there and back for seeding a horse for exhibition is probably more than most breeders will think worth doing, for it must be recollected that the horse-breeder does not profit directly or indirectly by obtaining a prize or a commendation, as the cattle-breeder does, in the additional value such successes impart to his whole herd. Yet it is certain that nothing is more desirable than to encourage a good show of horses, for there is no kind of stock—referring in particular to hunting and saddle-horses, not being thorough-bred—in breeding which so little care or judgment is exercised as horses. The Society's shows ought to produce animals calculated to stimulate the enterprise and direct the judgment of the agriculturists who may be disposed to breed horse stock.

As regards cattle and sheep, the existing arrangements do not appear to be complained of, and for the conveyance of horses to the Society's annual shows the proper plan to adopt would seem to be that the railway companies should convey horses in boxes by certain specified passenger trains, not perhaps gratuitously, but at a low charge.

Literature.

Political Economy as a Branch of General Education; being an Inaugural Lecture delivered in Queen's College, Galway, in Michaelmas Term, 1859. By John E. Cairnes, A.M., Whately Professor of Political Economy in the University of Dublin, and Professor of Jurisprudence and Political Economy in Queen's College, Galway. London: J. W. Parker and Son. 1860.

Professor Cairnes' able lecture deserves to be known beyond the very limited circle which concerns itself with academic prelections, or with the occasional pamphlet literature of the day. Its subject is not the intrinsic importance of political economy, but its importance in one particular point of view,—as a branch of general education. The relation of economic science to other departments of knowledge, and the place to which it is entitled in a University course, form the theme with which naturally enough the Professor inaugurated his instructions. It is too much the practice of teachers and students to magnify their own special subjects at the expense of all others. Like the Great Turk, they bear no rival near the throne, and would secure their own unquestioned supremacy by slaying or exiling their brethren. At best, the devotee of a special department of knowledge is apt to treat the cultivators of other fields of truth with something of that contemptuous tolerance with which ancient philosophers used to treat the practitioners of mechanic arts. A grudging acknowledgment that they are very well in their way, or for such and such a class of persons, is often the amplest recognition granted them. A larger view, and a more philosophic habit of mind, will suggest a different procedure. The old phrase, "the circle of the sciences," contains a truth which, in the minute subdivision of intellectual labour, has well nigh dropped out of view. Almost every branch of knowledge is affiliated to, and is necessary to the complete comprehension of, every other. Starting from any one point, you travel round the whole circumference of human science, and arrive at the point whence you started. The attempts at encyclopædic knowledge, which characterised the thinkers of an earlier age, showed an apprehension of this truth. Their attempts were not the dictates of an intellectual ambition seeking new worlds to conquer, but the result of insight into the living unity and mutual dependence of all real knowledge. To understand a part thoroughly, the whole should be understood. This encyclopædic culture is not practicable now. Each science, if it is to be cultivated at all, must have its special cultivators. Still the relations of the sciences to one another are not altered, by the altered conditions of their successful prosecution. Those relations (to use an economic metaphor) are not relations of competition, but of co-operation. The sciences are not rivals outbidding or

underselling each other, but partners interested in each other's prosperity, and suffering each in the other's decline. To recommend a science as a branch of University education, or of general though extra-academic culture, the best means is not to exalt it over other sciences, but to exhibit it as subsidiary to them. Here, too, he who would be greatest must be the servant of all. Mr Cairnes has shown himself sensible of this truth. The following passage forms a part of a much longer argument in which he "endeavours to explain the mode in which political economy may be employed as ancillary to an important department of general literature—namely, the philosophy of history."

The absorbing business of life being [thus] with the greater portion of mankind the pursuit of wealth, the laws which govern wealth must, within certain limits at least, shape and control the destiny of mankind. We find, for example, slavery established in certain States of America. If we inquire to what this is due—how it happens that in one half of the Union this atrocious institution is maintained and defended, while it has disappeared from the other—the explanation, however little creditable the fact may be to human nature, is unquestionably to be found in the different industrial capabilities of different parts of that country. In the Southern States, the soil and climate are peculiarly favourable to the growth of certain productions—such as cotton, tobacco, sugar, and rice—in the cultivation of which slave labour may be employed with great effect; while in the North the natural conditions of the country are more suited to the cultivation of crops—such as wheat and maize—which do not offer to the working of the slave system the same facilities.* The consequence has been that slavery has maintained itself in the South against all the moral and religious influences which have been employed against it; while in the North it has long since succumbed.† The existence therefore of slavery in America, with all its disastrous consequences on the social and political career of the United States, is thus directly traceable to economic causes. Again, if we turn to Great Britain, we are struck with the rapid development of democratic tendencies, as the most salient and significant feature in her recent history. The explanation of this phenomenon is, doubtless, not simple. It is to be traced to the conjoint action of a variety of influences and occurrences too numerous even to mention. But, among the agencies which have contributed to this result, undoubtedly the most important is the growth of her manufacturing industry, accompanied by what was its necessary incident—the aggregation of population in towns. Nor is it only the permanent economic conditions of a country, but also the economic accidents (if the expression be allowed) which befal it, that affect the career of its history. Thus in Ireland we have had a complete social revolution effected through the temporary failure of one element of our food—a social revolution which cannot fail to contain the seeds of important moral and political consequences. On the opposite side of the globe, again, to take a still more striking illustration, California and Australia have, by the discovery of gold-fields, been suddenly transformed—the one from being the abode of some wandering semi-barbarous tribes, the other from being the domain of a few widely-scattered pastoral lords—into rich, populous, and flourishing communities, the principal resort of our redundant population, and the principal marts of our trade. The career of nations is thus profoundly influenced by the laws which govern wealth; and if this be so, it seems evident that, in order to understand the history of nations—in order to perceive the connection in the events of which history is composed—we must become acquainted with those laws, their character and operation; in other words, in order to solve the problems of history, we must study political economy.

The same point is illustrated, with great acuteness, though at a length which renders extract impossible here, in discussion of the economic causes through which, at a time when the greatness of England was at its highest, and its commerce had received new impulse and extension, "destitution became so prevalent and poverty so importunate as to obtain from the Legislature for the first time a recognition of its right to belief," in the shape of the Poor Law of Queen Elizabeth. The pages in which Mr Cairns treats of this subject well deserve the attention of every thorough historical student.

Mr Cairnes understands as well the limits of his subject as he does its importance within those limits. In the concluding pages of his lecture, he combats "an error the tendency of which is unduly to exalt political economy,—to raise it to a position not merely of authority, but of exclusive authority,—to regard it, in a word, as the sole umpire in all social and political questions." With especial reference to the question of the duties of the State in regard to education, and especially to the higher or University culture, he points out the mistakes of those who would leave moral and intellectual wants to the natural operation of the principle of supply and demand; and to whom the phrase *laissez-faire* is the symbol of the highest wisdom. The chief evil, indeed, against which political economists have now to contend, is not the neglect of their science, but its misapplication. A very dangerous degree of half-knowledge on the subject is exceedingly prevalent. The phrases which embody its leading doctrines are in everybody's mouth, and are blindly applied to the solution of the most intricate problems, without any appreciation of the truths which limit these doctrines, and make them representative, not of absolute facts, but simply of prevailing tendencies. The number of those who talk political economy (as M. Jourdain talked prose) without knowing it, is very much less than the number of those who are all but entirely ignorant of a subject which they fancy they thoroughly understand.

Mr Cairnes's reputation as an economist does not need our endorsement. But from the circumstances and form of the present publication, we have thought it might not attract that attention which it deserves, and have therefore noticed it at a length which, if somewhat out of proportion to its bulk, is not out of proportion to its value.

El Fureidis. By Maria S. Cummins, Author of "The Lamplighter" and "Mabel Vaughan." In Two Vols. London: Sampson Low. 1860.

The fascination which Eastern life and scenery exercise over Western imaginations forms a curious chapter in the annals of literature. Not seldom does it serve to bring out striking illustrations of the essential differences between the two modes of regarding existence. Even the "Arabian Nights" themselves, which have so long been deemed infallible daguerrotypes of Eastern life, are now discovered to have been greatly Europeanised in the French edition which first introduced them among us, and not all the literary and artistic superiority of Mr Lane's magnificent version can quite reconcile us to the palpable lowering of the whole conception of individual and social life which pervades his more faithful translation. One is almost tempted to say that the Western mind is better fitted to do justice to Eastern materials than are the Orientals themselves. Certain it is that the Eastern element is more serviceable to mankind when blended with other elements in the complexity of a fully developed mind, than when left to itself in all the rank luxuriance of a wild nature. And it is equally certain that the charm of the East, partly originating in Scriptural association, partly fed by an unconscious yearning after ideal beauty, will sometimes elicit from apparently common-place Western minds a deeper tone than any of which they might naturally be supposed capable. Something of this effect may be traced in "El Fureidis," which is very superior in every way to the tame, insipid novels which Miss Cummins has hitherto published. The mystic-sounding title signifies "the Paradise," or garden of Lebanon, and is apparently intended for the little Maronite village known by travellers as Eden, situated among the clefts of Lebanon, about three hours' journey from the celebrated group of cedars. This village is painted by our author as a sort of "happy valley," where all is innocence and peace. The hero of the tale, a fastidious but high-minded English traveller, enters the valley with his Arab guide one beautiful Sunday evening. Falling (conveniently) ill of a fever, he is nursed by a French Protestant missionary and ci-devant monk, Father Lapierre, and on his recovery becomes the guest of the chief proprietor and benefactor of El Fureidis, Augustine Trefoil, an American silk manufacturer, whose daughter Havilah, "the rose of Lebanon," is endowed with the charms of the East and the culture of the West. The Englishman, Meredith, and his guide Ahdoul, formerly her playmate, soon become rival suitors to the "mountain rose," and the fluctuation of their fortunes in love, and the effects thereby wrought upon their characters, form the plot of the story, which is well conceived and pleasingly told. The chapter entitled "The Crisis" is especially interesting and dramatic; but what that crisis is, it would not be fair to the author to reveal. It should be remarked, however, that the interest of the story chiefly depends on the "Frank" element, for Havilah is quite as much Western as Eastern; and although the author's enjoyment of Syrian scenery and life is vivid, it is not accompanied by any preference for Eastern character or habits, which she employs chiefly as a filling-in of her landscape. The book abounds in descriptions, but they do not extend to tediousness, and although not drawn from personal knowledge, they have all the zest of personal enjoyment of the scenes described, especially of the mountain glories of Lebanon.

How far "El Fureidis" answers to the author's paradisaic representations, it would not be easy to say. Its name is said to be derived from the loveliness of the spot, and travellers bear witness to the beauty of its inhabitants. Bayard Taylor says, in his "Lands of the Saracen," that "it is a mountain paradise, inhabited by people so kind and simple-hearted, that assuredly no revengeful angel will ever drive them out with his flaming sword." We should be glad to know that this latter clause has not received a melancholy contradiction from the terrible events of the last few weeks; a contingency which is not impossible, as the name of Eden has not, so far as we know, appeared in any of the accounts of the massacres. Still, even granting the best, we fear that Miss Cummins has coloured her picture far beyond the bounds of probability. In no part of the story is difference of creed represented as seriously obstructing religious sympathy or friendly intercourse. "The bells of the convent tower and the village [Protestant] church had long since learned to chime in unison"; and Father Lapierre's congregation is described as including Turks, Druses, Maronites, and Protestants, while a trained choir sing, to an organ accompaniment, an anthem of which the words are taken from Matthew Arnold's beautiful poem, "Thou who dost dwell alone," &c. The good Father is represented, indeed, as a missionary of very wide sympathies and wonderful powers of influence; but we fear that the day when even such pastors as he can bring Druses and Maronites, Turks and Christians, together to sing choruses to Matthew Arnold's hymns, is far distant. The author expresses sanguine hopes for the future of Syria, but on what foundation they rest does not clearly appear. Putting aside, however, the

† A fact which shows how much more efficacious economic agencies may be than moral in dealing with a question of this kind. The development of our cotton resources in India will probably do more for the extinction of slavery than all the machinery of moral and political agitation has yet effected. It will strike the slave-master in his only vulnerable point—his self-interest.

matter-of-fact aspects of the subject, and taking it merely as a romance, we can cordially recommend our readers to make acquaintance for themselves with the Happy Valley of El Fureidis.

THE SAND-HILLS OF JUTLAND. By HANS CHRISTIAN ANDERSEN. London: Bentley. 1860.

This is another welcome volume of Andersen's charming little fairy stories,—wild fanciful legends, which are touched off with the lightness of a master's hand. The present volume is in no way unworthy of its predecessors. Mingled with the legends, are some of the "imaginary conversations" between pens and inkstands, &c., which Andersen delights in, and which the touch of his genius prevents from being puerile. "The Old Bachelor's Nightcap" is a pathetic little tale; but for quaint humour, mingled with a mild covert irony, we must give the precedence to "Soup made of a Sausage Stick." An extract or two will justify our praise:—

"We had a capital dinner yesterday," said an aged female mouse to one who had not been at the feast. "I sat only twenty-one from the old King of the Mice: that was not being badly placed. Shall I tell you what we had for dinner? It was all very well arranged. We had mouldy bread, the skin of bacon, tallow candles, and sausages. Twice we returned to the charge; it was as good as if we had had two dinners. There was nothing but good humour and pleasant chit-chat, as in an agreeable family circle. Not a mite was left except the sausage stick. The conversation happened to turn upon the possibility of making soup of a sausage stick. All said they had heard of it, but no one had ever tasted that soup, or knew how to prepare it. A health was proposed to the inventor, who, it was remarked, deserved to be superintendent of the poor. Was not that witty? And the old King of the Mice arose and declared that the one among the young mice who could prepare the soup in question most palatably should be his queen, and he would grant them a year and a day for the trial." "Well, that was not a bad idea," said the other mouse. "But how is the soup made?" "Ay, how is it made? That was what they were all asking, the young and the old. Every one was willing enough to become the queen, but they were all loath to take the trouble of going out into the world to acquire the prescribed qualification; yet it was absolutely necessary to do so. But it does not suit every one to leave her family and her snug old mouse-hole. One cannot be going out every day after cheese parings and sniffing the rind of bacon. No: such pursuits too often indulged in, would perchance put them in the way of being eaten alive by a cat." These apprehensions were quite terrible enough to scare most of the mice from going forth upon the search of knowledge. Only four presented themselves for the undertaking. They were young and active, but very poor. They would have gone to the four corners of the earth if only good fortune might attend their enterprise. Each of them took with her a sausage stick to remind her what she was travelling for.

After a year the enterprising young creatures return, and, when three of them have related their experiences, the last and wisest of them thus tells her story:—

"I have not travelled at all," said the last mouse: "I have remained in our own country. It is not necessary to go to foreign lands—one can learn as well at home. I remained there. I have not acquired any information of unnatural beings. I have not eaten information [like one of the other mice] or conversed with owls. I confined myself to original thoughts. Will some one now be so good as to fill the kettle with water and put it on? Let there be plenty of fire under it. Let the water boil—boil briskly; then throw the sausage stick in. Will his majesty the King of the Mice be so condescending as to put his tail into the boiling pot and stir it about? The longer he stirs it the richer the soup will become. It costs nothing, and requires no other ingredients—it only needs to be stirred." "Cannot another do this?" asked the King. "No," said the mouse. "The effect can only be produced by the royal tail."

The water was boiled, and the King of the Mice prepared himself for the operation, though it was rather dangerous. He stuck his tail out as mice are in the habit of doing in the dairy, when they skim the cream off the dish with their tails; but he had no sooner popped his tail into the steam than he drew it out and sprang down. "Of course you are my queen," said he; "but we shall wait for the soup till our golden wedding, and the poor of my kingdom will have something to rejoice over in the future."

The stories called "The Mud King's Daughter," and "The Neck of a Bottle," are also instinct with Andersen's peculiar genius; the former the most so, because it affords most play to his power of giving a humorous kind of imaginative life to the thoughts of animals. There are no animals that have struck his fancy so much as storks, and there are none whose conversations he makes so delicately humorous. The importance which the stork-mother attaches to keeping her feelings in a state of composure during the time of sitting on her eggs,—her household views generally,—and the severity with which she treats her husband's larger sympathies with human affairs, are inimitably ludicrous. Andersen's fancies have a childlike grotesqueness and straightforward credulity about them. He almost believes his own stories. The animal characteristics he observes work in his mind till he sees what they would be if combined with a certain simple measure of human thought; and he can hardly help believing there really is this in his favourites, though it is not manifested to us. The sketches in this little book are amongst the most charming of his writings.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The discussion in the English Parliament on the paper duties has once again turned attention here to the great rag question; but that question may be considered as set at rest for at all events a year to come. A writer in the *Journal des Débats* remarks, that the Protectionists gained a great victory in compelling the Government to drop its projected repeal of the prohibition to export rags; and as those people always make the most of any advantage, they will certainly prevent the matter from being taken up again just now. In reference to this rag affair, several journals dwell on the fact that in Algeria there are certain species of plants growing in great abundance which are peculiarly adapted for the making of paper. It is possible that English manufacturers and *savans* are acquainted with these Algerian productions; but if not, they would do well to occupy themselves with them without delay.

The Superior Council of Commerce has devoted several sittings to the examination of cotton-spinners—a class who conceive themselves peculiarly aggrieved by the Treaty of Commerce with England, and who have always been remarkable for the tenacity with which they defend their interests. Several of the principal French spinners have been heard; and spinners of England, the Zollverein, and Switzerland have likewise been examined. Among those from England was Mr Ashworth, of the Chamber of Commerce of Manchester.

A commission is established in this country for the purpose of fixing the *real value* of imports and exports, and it has just presented its annual report for 1859. The importance of this document has been greatly diminished by the publication (reproduced in the ECONOMIST) of the Customs returns for that year, in which the official and real value of goods brought in and sent out of the country were set forth. Nevertheless, the following little *tableau* may be worth preserving:—

	Value in 1859 of Articles.			
	Lowered.	Increased.	Maintained.	Total.
Agricultural productions of all kinds	50	71	91	212
Timber, wood, metals, fuel, &c.	54	27	216	297
Yarns and fabrics of silk	13	38	23	
Wool	18	22	25	280
Flax and hemp	14	39	42	
Cotton	4	26	16	
Other articles	180	186	592	958
Totals	333	409	1005	1747

The Discount Bank (Comptoir d'Escompte) has held its annual meeting within the last few days. The amount of its operations for the year ending the 30th of June last was 732,000,000f, and was 28,000,000f more than in the year preceding. In these operations discounts figured for upwards of 612,000,000f. In the course of the year the amount of deposits was nearly 201,000,000f, the highest yet attained; and that is ascribed to the difficulty which existed of safely employing capital, owing to the political distrust which prevailed. The total profits of the year were 1,846,826f, and, after deducting from them a sum for the reserve fund and certain charges, there remained to be distributed among the shareholders 1,440,000f. This was sufficient to enable a dividend of 36f per share, or 7 1-5th per cent. of the nominal capital, to be divided. The reserve fund now amounts to 4,158,332f.

The Omnibus Company of Paris, which is a very profitable affair, has had, in consequence of the recent aggrandisement of the capital, to modify its convention with the Municipality. In return for an extension of its monopoly for a period of 26 years, that is to say from 1884 to 1910, it has undertaken to run 500 omnibuses instead of 420 as heretofore, to pay the Municipality from the beginning of next year 1,000,000f annually, and a further sum of 1,000f for every omnibus which may be added to the 500—that sum to be increased to 1,500f from 1871, and to be further increased to 2,000f from 1886; moreover, when the dividend per share shall exceed 70f, the Municipality is to have one-half of the surplus. A meeting of the shareholders, held a few days back, sanctioned this convention; and, moreover, authorised the Directors to raise a loan of 7,500,000f, which is required to pay for the increase in the number of vehicles, horses, &c.

The Directors of the new bank, "The Société Generale de Credit Industriel et Commercial," announce that the net profits of the first half of the present year are 677,260f, and that they have resolved to distribute to the shareholders on account of the year's dividend 400,000f of the sum. This will give 5f per share, or 4 per cent. on the calls paid upon the shares. The payment of the 5f, however, is not to take place before the 1st of November next.

The Municipality of Paris advertises that it will from the 13th of this month receive subscriptions for its new loan. This loan is to be raised by an issue of 287,165 bonds of the nominal value of 500f, but which are to be taken at 475f, payable in nine instalments, the last instalment of which is to fall due the 10th September,

1862. The bonds are only to bear 15f a year interest, but a sum of 300,000f is to be given annually to them as prizes in a lottery.

An issue of 40,000 bonds by the Roman Railway Company is announced. It is to take place at 245f per bond, but the reimbursement is to be made at 500f, and 15f interest is to be paid.

An Imperial decree allows the free importation from Russia of rapeseed to be converted into oil, but subject to the condition that it shall be brought in French or Russian vessels, and that the oil made shall be exported.

The Council of the Arrondissement of Bordeaux (a sort of petty parliament for local affairs) has presented an address to the Emperor, thanking him for the Treaty of Commerce with England and for his other commercial reforms.

The Government has decided that the *déchet* (waste or refuse) of wool may be imported free of duty.

The Bourse has been very dull during the past week. As usual at this season, the greater part of speculators are out of town, and the political situation is not such as to render extensive operations desirable. The following are our quotations:—

The following is an account of the markets:—

Flour.—Owing to the uncertainty of the weather, both holders and buyers have displayed great reserve during the past week, but prices have advanced, yesterday's quotations having been 60f to 65f the sack of 159 kilogs. Four marks have also advanced: the present month being 62f to 62f 50c; September, 63f to 63f 50c; September and October, 64f.

Wheat.—At *Paris*, yesterday, offers were not numerous, and prices rose: ordinary being 34f to 35f 50c the sack of 120 kilogs; good, 36f 50c to 37f 50c; choice, 38f to 38f 50c. Of the provincial markets, 62 present a rise of 11c to 2f 10c the hectolitre, 46 a fall of from 14c to 1f 50c, and 40 have undergone no change.

Cotton.—The sales at *Havre*, in the week ending Friday, were 6,920 bales, and the arrivals 5,346. Prices again fell 1l for very low, 1f to 3f for low, 1f to 2f for very ordinary, and 1f for other sorts; low new Orleans was consequently 80f, and very ordinary ditto 92f. The stock on the 1st was 239,970 bales. This week, business has been somewhat active. Yesterday, the quotations of low New Orleans was still 80f, but prices generally were firmer.

Coffee.—At *Havre*, in the week ending Friday, 250 sacks Hayti Gonaïves went at 82f 50c the 50 kilogs in bond; and 850 Rio, not washed, 73f to 75f; a small lot of Ceylon triage, 109f to 112f; one of Ceylon plantation, 118f to 119f; various lots of damaged Hayti, Porto Rico, and Brazil were likewise sold. The arrivals of the week exceeded 12,000 sacks. The stock on the 1st was 105,280 sacks and 1,288 casks. This week, the sales have not been extensive: Rio, 75f to 78f. At *Bourdeaux*, last week, some lots of Rio, washed, went at 85f 50c to 91f; 115 sacks Costa Rica, 113f 50c; 3,500 sacks Mysore, 118f to 119f; 600 Salem, 122f 50c. This week, nothing has been done. At *Nantes*, last week, two lots of Reunion, *fève ronde*, went at 135f and 136f 50c. This week, there have been no sales.

Sugar.—At *Havre*, in the week ending Friday, business was important, not fewer than 4,800 casks French West India having been sold at 49f the 50 kilogs duty paid, and a small lot of ditto, 51f; 790 bales Reunion, at 54f duty paid; 3,150 casks Havana, 36f 50c to 37f 50c in bond; and 2,806 sacks Mauritius, 58f duty paid. The arrivals were rather more than 1,000 casks and 527 sacks, the latter from Dunkirk. The stock of French West India on the 1st was 9,800 sacks. This week, a fair amount of business has been done: French West India at 49f and 49f 50c; Havana, 36f 75c. At *Bordeaux*, last week, there were several sales, and the closing quotations were: French West India, 48f 50c to 49f the 50 kilogs duty paid; Reunion, 52f 50c to 53f ditto; Havana, 73f to 74f the 100 kilogs in bond; Mauritius, 77f to 78f ditto. This week there have been no sales. At *Nantes*, last week, some very large sales were made, and the closing quotations were: Reunion, 52f the 50 kilogs; Mauritius, 53f 50c; French West India, 49f; Mayotte, 47f. This week, a large lot of Reunion has been sold at 52f; a small lot of French West India, 50f; and one of "usine" ditto, 65f.

Indigo.—At *Havre*, in the week ending Friday, 140 cases Bengal were sold at 30c to 50c above the estimates, and 12 ditto at prices not stated; also 4 cases Kurpah at 7f 10c the ½-kilog duty paid. The arrivals were 79 cases. The stock on the 1st was 2,051 cases. This week, 17 cases Bengal and 3 Java have been sold at prices kept secret. At *Bordeaux*, last week, 30 cases Bengal and a small lot of Guatemala were sold. The quotations of the different sorts of Bengal were from 7f to 12f 75c the half-kilog. This week, there have been some small sales, but the prices are not given.

Tallow.—Nothing was done at *Havre* last week, and the stock was insignificant. This week 10 casks Rio Rran have been sold at 67f the 50 kilogs. At *Paris*, yesterday, the 100 kilogs were 141f 25c, a fall on last week's quotations.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg., first quality, was 97f and 98f the hectolitre; Montpellier, of 86 deg., 130f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 130f; and beetroot, first quality, 102f.

Hides.—At *Havre*, in the week ending Friday, the sales were 1,400 La Plata, dry, at 145f the 50 kilogs duty paid; 600 Monte Video, salted, 82f 50c; 4,100 Uruguay, salted, 80f; 200 Rio Grande, dry, 125f; 2,250 ditto, salted, 75f to 77f 50c; 4,200 Pernambuco, drysalted, 96f; 1,475 Rio Janeiro, salted, 62f 50c; 649 calf, dry Buenos Ayres, 120f; 870 ditto, salted, about 78f; and 18 bales cow India from Calcutta, at prices kept secret. The arrivals exceeded 15,000. This week, business has been active: Buenos Ayres, salted, 85f; Rio Grande, 130f; ditto ox and cow, 75f to 80f; New York, 53f to 55f; Pernambuco, 67f 50c to 97f; Rio Janeiro, salted, 62f 50c.

Wool.—Business at *Havre*, in the week ending Friday, was rather active: 217 bales La Plata, unwashed, went at 1f 52½c to 2f 90c the kilog; 198 bales Monte Video, at prices kept secret; 60 bales sheep skins, Buenos Ayres, unwashed, 75c to 85c. The arrivals were about 15,000 bales. This week, there have been several sales: Buenos Ayres, unwashed, 205f to 312f 50c the 100 kilogs; and a small lot at 2f 30c to 2f 45c the kilog. There have also been some sales of damaged.

Lausanne, Aug. 3.

In a recent letter I informed you that an International Congress to examine the grave question of taxation had been summoned in this city. The Congress was attended by several eminent economists of different nations, and the debates as to the best system of imposts were animated and instructive. The resolutions eventually come to were these:—"The Congress is of opinion—1. That the different taxes which modern States have borrowed from the fiscal system of preceding centuries may be reduced to a small number, and eventually to a single one. 2. That this transformation will become more easy of accomplishment by the progress of public liberties, of the independence of nations, and of civilisation in general. 3. That taxation to be just ought to embrace all the elements of wealth, and apply to both capital and income. 4. That the best system of taxes would be in theory the income tax, combined with a tax on capital and one on legacies and donations. 5. That, in order to realise this system, it is important, before establishing it, to enlighten public opinion by the diffusion of the principles of social economy."

Turin, Aug. 5.

It appears certain that the Government will not have the slightest difficulty about its new loan of 160,000,000 lire (6,000,000*l* sterling). Several great continental bankers, and among them, it is said, Messrs Rothschild, have already offered to take a considerable part of it, and demands from other quarters are larger than had been expected. The issue takes place at 80½.

COMMERCIAL AND MISCELLANEOUS NEWS.

The annexed report is dated Calcutta, June 18:—Produce Market.—We have again passed a dull fortnight. There has been no animation in any branch of our export trade, and business continues to be done only in fulfilment of open orders from home. Import Market.—During the last few days a better feeling prevailed in our market, with a steady demand, and in many instances higher prices have been obtained. Government Securities.—The rates for these securities were fairly maintained at previous quotations, until large sales for local and Bombay account, about fifteen lacs, brought down the Five-and-a-Half 1 per cent., and they may now be quoted at 103.8 to 103.12; the Five per Cent. kept steady at from 97 to 97.4, and the Four per Cent. at 84. Money Market.—Money continues very abundant and cannot find employment at the low rates now ruling; the export trade is dull, and though there was some revival last week in the piece goods' market, the import trade is still without animation. Exchange.—The downward tendency noticed in our last in exchange on London has continued, and Bank bills have sold from 2s 0⅛d down to 2s 0⅛d, credits from 2s 9-16d down to 2s 0⅜d, and documentary from 2s 0⅜d to 2s 0⅜d.

The mercantile advices from the Australian Colonies by the present mail represent trade at Sydney, New South Wales, to have been interrupted by the holidays and general influences, but nevertheless there was more business doing than in any other month of the year, and more confidence was shown in selling goods for credit. Little wool had been offered for sale, at rather easier prices, if anything. At Melbourne there was less business doing. The new tariff of duties proposed by the Government of South Australia has passed the Lower House, and, as a matter of course, was expected to do so in the Upper. For the convenience of shippers on this side we supply the following import duties according to both the new and the old duties:—

Articles.	New Tariff. s d		Old Tariff. s d
Beer, porter, &c	0 6	per gal.	0 4 per gal.

Total	2,392,455	6	2,146,053	0

The latest advices from Rio state that business generally was very restricted. Imports were unusually small, and of only a very few articles were the supplies superabundant. The inactivity prevailing in the coffee market reported by last mail continued. A fall of 350r to 400r per arroba having been submitted to, an animated business resulted, the attention of operators being chiefly directed to the United States. The prices latterly paid for United States assortments ruled from 6,200r to 6,350r. Stock reduced to 40,000 bags. Sales from the 8th to the close of June amounted to 75,350 bags, and from the 1st of July to date 19,450: in all, 94,800 bags. Notwithstanding the improved means of communication with the interior, and even taking into consideration the probability of regular and fair supplies of the new crop, it was not thought that, in the face of the extremely limited shipments during the past six months, the total exports of this year will exceed or even reach 2,000,000 bags. There had been no alteration in white sugars, but brown continued on the decline, chiefly the inferior descriptions. Our advices from Bahia are to the 13th ult. Supplies of coffee from the interior had amounted to only about 1,000 bags during the fortnight. The greater part had been disposed of at 5,700r and 5,800r per arroba. Cocoa was neglected; a small lot of 100 bags had been sold at 5,000r. In the sugar market about 1,000 bags of brown Nazaretha and 600 cases of brown Cotinguibas changed hands shortly before the arrival of the steamer from Europe, the former at 2,300r and the latter at 2,700r per arroba, being an advance of 100r per arroba on previous prices; subsequently the market again became dull, purchasers refusing to grant the same rates; of whites no sales transpired, and quotations continued nominal at 3,600r to 3,800r per arroba.

The following report shows the state of the Albany lumber market during the week ending July 25:—Lumber comes in freely, though the receipts are not so large as they were a week or two past. The stock on hand, however, is ample, and the assortment of all kinds very good. Letters from Western correspondents have been received, advising their consignees that the bulk of the lumber to come forward will be shipped by the first of September, as they anticipate so great an advance of freights after harvest as to make it unprofitable to ship during the fall. Should there be an important increase in the cost of transportation, lumber will have to advance in a corresponding ratio to ensure a full supply for the fall trade. The sales for the week have been moderately active, and several of the largest buyers have been in market laying in stock, while freights and lumber rule low. The receipts by the Erie and Champlain canals, from the opening of navigation to July 23, in the years named, were as follows:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1859	123735762	28027	49353	63817857
1860	136549600	22117	30468	45744779

A private letter from Cayenne, in French Guiana, of the 30th of June, informs us that the cultivation of sugar has been abandoned in the convict settlement of Maroni and replaced by that of coffee. All the agricultural operations in the same locality had been suspended, and consequently all the labour expended and cost incurred in preparing the ground has been thrown away. Altogether the attempts made by the Government to render convict labour profitable in the colony had been unsuccessful.

An abstract of the net produce of the revenue of Ireland paid into the Exchequer, in the year ended the 31st day of December, 1859:—

	Year ended December 31, 1859. £	s	d
Customs	2,304,578	5	11
Excise	3,109,000	0	0
Stamps	530,981	8	1

The inactivity and depression which characterised the market for so long a time previous to our last issue, have given place to a moderately active demand from the home trade, under which the market has assumed a more buoyant tone, and prices have ruled much more regular. The sales for the three days aggregate 4,500 bales, closing steady, yesterday, at the appended rates. We quote:—

New York Classification.

The sales of cotton this week have been large. The business done by the trade has not been much beyond their average purchases of the season, but considerable operations have been entered into by speculators, and exporters have bought freely. Holders have, at the same time, demanded higher prices, and in the middling and lower qualities of American a decided advance has taken place. We have raised our quotations in these descriptions ¼d per lb. Egyptian have been more saleable, but do not command higher rates. Brazil are firm at last quotations. East India may be quoted higher. The sales to-day are estimated at 10,000 bales. The market is firm and healthy. The reported export amounts to 10,740 bales, consisting of 6,210 American, 370 Brazil, and 4,160 East India.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the Gazette.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 8th day of August, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,309,205	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,834,205
		Silver Bullion	...
	29,309,205		29,309,205

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,804,273
Rest	3,513,130	Other Securities	19,483,347
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	4,823,222	Notes	7,601,815
Other Deposits	14,003,280	Gold and Silver Coin	717,339
Seven Day and other Bills	714,142		
	37,606,774		37,606,774

Dated the 9th August, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,421,532	Securities	29,209,620
Public Deposits	4,823,222	Coin and Bullion	15,551,544
Private Deposits	14,003,280		
	41,248,034		44,761,164

The balance of Assets above Liabilities being 3,513,130*l*, as stated in the above account under the head Rest.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A decrease of Circulation of	£356,007
An increase of Public Deposits of	588,253
A decrease of Other Deposits of	714,374
An increase of Government Securities of	45,478
A decrease of Other Securities of	229,353
A decrease of Bullion of	207,336
An increase of Rest of	90,917
A decrease of Reserve of	155,084

The present Bank return is again unfavourable, inasmuch as there is a decrease in the bullion of 207,336*l*,—a decrease in the reserve of 155,084*l*—and a decrease on balance on the deposits of 126,121*l*. It shows a steady tendency towards a drain of the resources of the Bank, which would be very much aggravated in the event of further large imports of corn and cotton, and we may also add in the event of Mr Gladstone lessening the Government deposits by a sum of 1,300,000*l*, as he proposed to do, in order to meet the deficiency.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,497,189	£ 20,283,792	£ 21,361,596	£ 22,815,374	£ 22,421,532
Public deposits	6,283,402	6,300,771	4,668,793	5,912,113	4,823,222
Other deposits	9,717,785	10,263,335	13,902,964	14,675,923	14,003,280
Government securities	14,430,847	10,593,654	10,871,054	11,208,572	9,804,273
Other securities	10,096,045	18,679,056	15,316,060	18,474,568	19,483,347
Reserve of notes & coin	10,652,836	6,211,314	11,122,825	9,747,833	8,319,254

Bank rate of discount	2½ p. c.	5½ p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	96⅛	90	96⅛	95½	95½
Average price of wheat	44s 1d	58s 10d	44s 10d	43s 7d	58s 7d
Exchange on Paris (short)	25 32½ 35	25 20	25 7½ 12½	25 10 15	25 12½ 17
— Amsterdam ditto	12 1	11 16 17	11 16½ 11	11 13 14	11 14½ 15
— Hamburg (3 months)	13 10½	13 8½	13 8 8½	13 5½ 6	13 6 6½

In 1850, money was beginning to advance in value in anticipation of the increase of trade in consequence of the gold discoveries in California.

In 1857, the stock markets were greatly agitated, owing to the progress of the mutiny in India. Delhi still held out against the British forces, but the unshaken loyalty of the native armies of Bombay and Madras tended to check the feeling of alarm. The Chancellor of the Exchequer notified that the Indian Government were at present in no want of money.

In 1858, the rate of discount for the best bills was 2½ per cent. 85 per cent. had been paid on account of the Indian Debenture Loan of 4,421,000*l*. The negotiation of another batch of Debentures was pending.

In 1859, the prospectuses appeared of an Indian Loan in a 5 per cent. stock to the amount of 5,000,000*l* sterling, and a Russian Loan of 12,000,000*l*, 3 per cent. stock, at the issue price of 68 per cent. Money was abundant at 2½ per cent., but had rather an upward tendency.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 378,260*l*; in 1857, a deficiency of 8,415,721*l*; in 1858, a deficiency of 1,413,096*l*; and in 1859, a deficiency of 3,798,639*l*. In 1860, the deficiency is 5,480,067*l*.

Money and Discount Market.—In the early part of the week there was an easy money market, the rate of discount on first-class bills was 3¾ per cent.; but within the last day or two a decided increase in the demand for money has taken place, and the rate to-day is fully 4 per cent. at short dates, and 5½ per cent. for bills having six months to run. One cause for the demand for money is the payment of the instalment on the 1,500,000*l* East Indian Railway Debentures which falls due to-day; another is the apprehension of a deficient harvest, and the consequent importation of a large quantity of wheat from the United States and the continent of Europe, which will absorb not only the gold advised as being shipped from Australia, amounting to 930,000*l*, but likewise cause a drain from the Bank of England.

Should this be the case—and it is far from improbable, for unquestionably large orders for foreign and American corn have been given—the rate of money may be expected to advance. In addition to this, there is an apprehension of foreign loans. France, Sardinia, Austria, Russia, and Turkey all require loans, but the two former countries will raise them at home; and as for Turkey, England has lent enough. An attempt has lately been made through the agency of the Credit Mobilier at Paris to introduce a Turkish 8 per cent. loan of 8,000,000*l* sterling at the price of 80, but it failed from the small support it received.

The rate of money on Government securities is 3 per cent. for short dates.

The rate allowed on deposits at call is 3 per cent., and 3½ per cent. at seven days' notice.

English Funds.—A very limited business has been transacted in the English funds during the week. The settlement of the monthly account took place yesterday, and passed off satisfactorally; the rate of continuation from account to account was from 2 to 2½ per cent. The public are evidently doing but little business. On the announcement of an Indian Loan of 3,000,000*l*, the market for Consols opened 93 to ⅛, about ¼ per cent. worse. Considering the deficit for India amounts to 7,472,301*l*, surprise is expressed at the small amount of the loan; but it is generally supposed, when Mr Wilson's plan for the amelioration of Indian finance comes into operation, that the revenue and expenditure will be balanced.

In 1856-7, the deficiency in Indian finance amounted to 474,208*l*; in 1857-8, to 8,390,642*l*; in 1858-9, to 14,187,617*l*; in 1859-60, to 8,981,729*l*; in 1860-61, to 7,472,301*l*.

India 5 per Cent. Stock fell about 1 per cent. on the announcement of a new loan; but the market is very limited. An idea prevails that the new Indian Loan will not be raised at present, but that a credit to the extent of 3,000,000*l* will be taken. The extreme fluctuations in Consols this week have been from 93½ to 93. Exchequer Bills are 3s to 6s prem.; Reduced, 93¼ ⅜; New 3 per Cent., 93¼ ⅜. The rate of money on Government securities is 3 to 3½ per cent. for short loans. To-day, Consols fell to 93⅛, but the market has been firmer this afternoon, and closes 93¼ ⅜ for the September account.

The following are the rates of discount at

	Bank Rate. Per cent.	Open Market. Per cent.
Amsterdam	3½	3½
Berlin	4	4
Brussels	3	3
Frankfort	2	1¾
Hamburg	No Bank rate	1¾
London	4	4
Paris	3½	3
St Petersburg	5	5 to 5½
Vienna	5	4

Foreign Funds.—The transactions in foreign funds during the week have been very limited, and prices have remained remarkably steady.

The portion of the new Sardinian Loan of 6,000,000*l*, contracted with various financial establishments at Turin and elsewhere, is at the price of 80½, with 1 per cent. commis-

sion; and the delay in the instalments extending over ten months will yield a further advantage of 1¼ per cent. The balance, 3,200,000*l*, which is offered to the public, and of which the lists were opened at Turin and Genoa yesterday, is at the same price, but without the allowance of commission, except for subscriptions of 500,000f Rentes, in which case 1 per cent. is allowed, while for subscriptions of not less than 50,000 Rentes there is an allowance of ½ per cent. The applications are expected to amount to three or four times the total to be allotted.

French funds close this afternoon at 68f 25c for the account.

The *Moniteur* of this morning publishes the usual monthly returns of the Bank of France, which shows the following results, as compared with the July return :—

	Francs.
INCREASE.	
Cash in hand	24 5-6 millions.
Bills discounted, not yet due	10½ millions.
Treasury balance	4 2-3 millions.
Private accounts	26 2-3 millions.
DECREASE.	
Advances	43½ millions.
Bank notes	27½ millions.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :—

RAILWAYS.—The London and North-Western dividend is at the rate of 5 per cent. per annum.

The railway market has been very steady during the week. Midland and North-Western stocks have slightly receded.

South-Eastern stock has improved.

This afternoon the only feature is a great heaviness in Lombardo-Venetian shares, which have fallen to ⅝ discount, in anticipation of a call being made.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day :—

RAILWAYS.

	Closing prices last Friday.	Closing prices this day.

BULLION.—We subjoin Messrs Pixley, Abell, and Langley's circular, which gives an account of the bullion transactions of the week, and also of those in India Government loan notes :—

Gold.—Since our last circular of the 2nd instant we have the following arrivals to report :—The Glasgow, from New York, with 32,000*l*; the Arabia, from New York, with 40,000*l*; the Vanderbilt, from New York, with 47,000*l*. These amounts have been taken for the Continent, but the demand is now so much less, that United States gold coin, which, at the beginning of the week was sold at 76s 3½d per oz. has been with difficulty disposed of to-day at 76s 3½d per oz; and it is not unlikely that a further decline in price may take place in the event of any large arrivals. The Sultan takes 60,500*l* to the Peninsula, and the Magdalena 63,250*l*, chiefly in sovereigns. The undermentioned vessels are now on their way from Australia :—The Agincourt, with 174,000*l*; the Leaping Water, with 158,000*l*; the Yorkshire, with 169,000*l*; the British Trident, with 109,000*l*; the Blue Jacket, with 125,000*l*; the Maidstone, with 195,000*l*; making a total of 930,000*l*, of which about 440,000*l* may be considered as quite due.

Silver.—Of the bar silver brought by the Atrato, that which was fine enough for the China market has been sold at 61½d per ounce standard; the remainder was sold for the Continent, at 61¼d per ounce. There is but little doing, however, at present, and we do not think that any specie will be sent to Bombay by the outgoing mail of the 12th instant. The Magdalena takes 13,500*l* to the Brazils.

Mexican Dollars.—The dollars ex Atrato were sold at 62¼d per ounce for the China market, and the demand is now good. The Vanderbilt has brought 30,000*l* in dollars from New York.

Exchange.—We have but little alteration to report since 2nd instant. Bank drafts on Bombay and Calcutta at sixty days' sight are 1s 11⅜d to 2s 0¼d; Madras, 1s 11⅜d; bills with documents on Bombay and Calcutta, 1s 11d to 1s 11⅛d.

India Government Loan Notes.—The market is inactive. Prices are, for the 5 per Cents, 96¾ to 97½; and for the 5½ per Cents., 102 to 102⅜.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 6d per oz, last price; South American doubloons, 74s per oz, last price; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 1½d per oz std; bar silver, containing 5 grs of gold, 5s 1⅝d per oz std; fine cake silver, 5s 6⅛d per oz; Mexican dollars, 5s 2¼d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11½d per oz, last price.

FAILURES.—The suspension has been announced of Mr E. M. Abbott, of the Bow Brewery. The reason assigned is that large shipments of beer which he had made to Calcutta under a contract with the Indian Government have been refused, on the ground of late arrival. The liabilities are estimated at about 100,000*l*, and the books have been placed in the hands of Messrs Quilter and Co.

At an adjourned meeting of creditors of Mr Thomas Randall (Parker and Co.), army boot contractor, of Higham-Ferrers, near Northampton, it was resolved to accept an amended composition of 8s 6d in the pound.

The creditors of Messrs Ridley and Son, hide and leather merchants, of Newcastle-on-Tyne, have also agreed, on the recommendation of the committee appointed to investigate the estate, to an offer of 4s in the pound.

The liabilities of Messrs Smith, Patient, and Smith are returned by Messrs Coleman, Turquand, and Youngs at 207,138*l* 2s 1d, and the assets at 37,097*l* 1s 7d. It is left for the consideration of the principal creditors whether the estate shall be wound up or go through the Bankruptcy Court, and on which subject the views of the bankers are to be ascertained.

MISCELLANEOUS MEETINGS.—At a meeting of the London Discount Company, Mr Scholefield, M.P., in the chair, the report was carried unanimously. No dividend was proposed on this occasion, the balance of profit of 8,861*l* being retained against the losses by the late failures in the leather trade. It was stated that up to the close of the half-year the course of business of the Company had been satisfactory, when their condition was suddenly affected by the breakdown of an establishment which, if not the largest that has suspended for years, had the widest ramifications. Credit had not been given entirely to that one firm alone, notwithstanding its reputation, but also to names that stood equally high. The Company held on the 30th of June 52,000*l* of bills discounted for the leather trade, of which 14,000*l* will be paid or have been paid in full. Of the remaining 38,000*l* it is impossible as yet to form an accurate opinion, but the loss is estimated at 21,000*l* at the outside. In other respects the general position of the Company is good, and all other accounts, except those of the failed houses, are considered perfectly sound. In answer to questions, it was

mentioned that the acceptances prejudiced by the suspensions above alluded to bear the names of six firms. The amount credited for overdue bills and sundry debtors is concurred in by the auditor, Mr Turquand, the accountant, and it is believed that the provision against loss has been over rather than under calculated. Mr Turquand also confirmed the accuracy of the valuation of the bills held under discount from the leather trade. This opinion is especially of value, since the accounts of the principal houses that have failed have been intrusted to the firm to which he belongs.

A meeting of the City of London Brewery (Calvert's) Company has been held, when a dividend was declared for the five months ending in June on the ordinary and preference capital, at the proposed rate of 6 per cent. per annum. The profits during that period were announced to be 22,889*l*, and the following account exhibits the manner in which they have been appropriated:—

PROFIT AND LOSS ACCOUNT, FEB. 1 TO JUNE 30, 1860.

		£ s d
Gross profit		22,889 14 11
Less interest due to inspectors	£3,673 19 7	
Less half of preliminary expenses	890 0 0	
Less depreciation of leaseholds	2,000 0 0	
Less wear and tear of brewery	500 0 0	
		7,063 19 7
		15,825 15 4
Preference dividend, 6 per cent.	2,413 5 5	
Ordinary dividend at 6 per cent.	10,238 18 8	
		12,652 4 1
		3,173 11 3
10 per cent. for reserved fund		1,582 11 6
Surplus carried to profit and loss of next half-year		1,590 19 9

It was explained with reference to the above that the item of interest to inspectors cannot occur again, and that the future profits will be thereby proportionately increased. The past season has been unfavourable for the operations of the Company owing to the badness of the weather. The prospects of the current half-year, however, are considered satisfactory, the augmentation in the spirit duties being calculated to cause an increased consumption of beer. The Directors believe that the 8 per cent. dividend held forth in the prospectus will soon be realised.

The Directors of the Ottoman Bank have resolved, at the meeting of the shareholders which is fixed to take place on the 29th August next, to recommend the payment of a dividend at the rate of 8 per cent. per annum free of income tax, and the addition to the reserve fund of 15,196*l* 12s 9d, being the profit result of the close of the Bank's operations on their Turkish Loan account. They also propose to carry over about 10,000*l* to next account from the profits of the half-year ending June 30.

At a meeting of the General Iron Screw Collier Company, Mr F. Mangles presiding, a dividend was declared at the rate of 10 per cent. per annum out of the profits of the past half-year of 4,534*l*. The fleet of the Company was stated to be excellent condition, notwithstanding the severity of the weather, which has also injuriously affected the earnings. The questions of the disputed debts of 1857-8 and of the liability from a collision with the Sophie are still unsettled. A further offer of 70,000*l* has been made for the fleet by parties identical, or nearly so, with those who sent the previous tender of 60,000*l*, but the Directors having failed to obtain certain conditions which they considered essential, the negotiation has fallen through.

At a meeting of the Mediterranean Extension Telegraph Company, the report stated that, in order to supply the want of direct telegraphic communication between Malta and Corfu, a proposal has been submitted to the Government and subsequently accepted to lay down a new line from Corfu to Otranto, by which the two islands will be connected *via* Italy and Sicily. As long as the new cable is in working order, the Government will pay the Company the second moiety of the subsidy—viz., 3,600*l*, thus renewing the entire payment of 7,200*l* per annum. A contract has been entered into with Messrs Glass, Elliot, and Co., to supply the cable in exchange for 8 per cent. preference shares. Arrangements have also been made for the restoration, if possible, of the Malta and Corfu line, and to recover the remnant of that between Malta and Cagliari, which now gives little hope of being finally restored.

The Birmingham and Midland Banking Company have declared a dividend of 4*l* per share for the half-year, payable 1st September. The Dudley and West Bromwich Banking Company a dividend for the past half-year of 5s per share, being at the rate of 5 per cent. per annum, payable 1st September. The Bilston Banking Company a dividend of 5 per cent. for the half-year, payable 1st September. The Worcester City and County Bank a dividend at the rate of 8 per cent. per annum, after deducting bad debts. The Stourbridge and Kidderminster Banking Company a dividend of 7s 6d per share, being at the rate of 7½ per cent. per annum.

The Oriental Bank now deduct the Indian income tax on the coupons of the non-registe red rupee paper only, on which the English tax has necessarily not been charged. With regard to the registered paper, of which the dividends are paid by bill on Calcutta, the practice is to take off the English tax in London, and the bills are then payable without further deduction. It thus appears that the double income tax is not now charged upon either the registered or unregistered debt. Those who have previously paid both will, doubtless, make application to the Government for restitution.

Imports of the week ..... 438,077 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

There was very little English wheat on show at Mark lane this morning; nevertheless, owing to the favourable change in the weather, the demand for all kinds ruled inactive at unaltered currencies. In foreign wheat only a limited business was doing on former terms. Barley, oats, beans, and peas, however, were taken off freely, at very full prices. Country flour was a dull inquiry, but not cheaper. The imports this week amount to 15,940 quarters of wheat, 5,460 barley, 9,270 oats, 6,230 sacks and 7,410 barrels of flour. The advices at hand, to-day, from our leading grain districts are to the effect that the crops are progressing slowly towards maturity.

At Liverpool this morning wheat and flour moved off slowly at full quotations, and other produce was steady in price.

Messrs Briggs and Co., of Alexandria, report the state of the grain trade to the 27th ult., as follows:—

Wheat has been firmly held, but the slight advance that may be quoted in prices is almost counterbalanced by the advance that has taken place in the rates of exchange for this port. Supplies of beans continue small, and quotations for this pulse may at the present moment be considered almost nominal. Supplies of linseed are gradually increasing. Operations since our last:—Wheat, Saide, 6,600 quarters, 33s to 34s; ditto, Bebera, 5,800 qrs, 31s to 32s 6d; ditto, white, 63 qrs, 33s; beans, Saide, 553 qrs, 26s 6d; ditto, Bebera, 1,665 qrs, 24s 6d to 25s; barley, 1,100 qrs, 18s to 19s 6d; linseed, 756 qrs, 39s to 40s per qr. Freights—Shipping continues excessively scarce, and we have at the present moment only three seeking vessels in port, but quotations may be made as follow, viz.:—For the United Kingdom for orders, 6s to 6s 6d; for beans and other grain seed in proportion; to a direct port, about 5s 6d; grain or pulse by steamer to Liverpool, 5s.

A good demand has prevailed in the Liverpool cotton market, the total sales amounting to 82,000 bales, and include 49,500 bales to the trade, 21,500 bales on speculation, and 11,000 bales for export. Quotations, however, are not much improved since last week, the increased inquiry having been readily met by holders. To-day the market closes steady, and prices firmer. Sales, 10,000 bales.

Messrs Briggs and Co., of Alexandria, writing on the 27th ult., furnish the following particulars in reference to cotton:—

A parcel of cotton of 1,000 cantars (about 200 bales), has been sold at auction by Government, and obtained a price equal to 8.40d per lb f.o.b.; other sales amount to only 227 bales, at from 5.23d to 7.07d per lb f.o.b. Freights—By steamer to Liverpool, ¼d; by sailing vessel nothing doing. Exchange has gradually advanced to 96⅝ piastres, and in some few instances 96½ per 1l sterling. Export of cotton in bales from 3d July to 16th July, 1860:—Great Britain, 1,211; France, 211; Austria, 361; total, 1,783.

EXPORT of COTTON in bales from 19th October to 16th July.

	Great Britain.	France.	Austria.	Total.
1856—1857.....	59,877	16,647	15,048	91,572
1857—1858.....	81,776	19,338	13,217	114,331
1858—1859.....	87,655	22,169	9,564	119,388
1859—1860.....	91,376	19,134	8,503	119,013

Messrs Volkart and Co., of Bombay, have forwarded the annexed report of the cotton market. It is dated July 7:—

We have had an unusually quiet fortnight, owing to an almost total absence of buyers for Europe, and a marked falling off in the demand for China. We could buy to-day about 6 rs below our last quotations, and may possibly go lower. Present stocks amount to about 28,500 candies. Last quotations:—Jambooseer, Broach, and Surat, 128 rs to 130 rs; Dholleea, 123 rs to 125 rs; Bhownuggur, 125 rs to 126 rs; Oomrawattee, 116 rs to 119 rs; Khandeish, 103 rs to 105 rs; Mangalore, Porebunder, and Veravul, 102 rs to 104 rs; Barsee, 105 rs; Comptah, 108 rs; ditto, sawginned, 128 rs to 130 rs per candy of 784 lbs. Freights—Business since our last has been slack, there is very little cargo offering for Europe, and present rates are much the same as a fortnight ago. Exports of cotton from Bombay since the 1st of January this year:—

	1860. bales.	1859. bales.
To Europe	312,937	382,781½
To China, &c.	110,906½	70,578
Total	423,843½	453,359½

Showing a decrease of.....29,516 bales.

"Complaints of drought continue," write Messrs Neill and Co., "and are becoming more numerous than heretofore. The season thus far has been unusually dry; but cotton being a 'dry weather plant,' has, on the whole, done well, and sustained little positive damage up to the present time. At the same time, serious results are apprehended on the high lands should the drought be prolonged much further; and in some places the plant has already ceased growing, and the top bolls are ripening, while, on the other hand, heavy rains during the maturing and picking season would be equally injurious. The crop is now forward and promising, but has yet to pass through a most critical period. Picking has commenced in the more forward districts; and as the corn crop is said to have been considerably reduced by the dry weather, it is probable that cotton will get the more careful attention."

The market for all kinds of tea has continued in a most inactive state. Compared with last week, however, no change has taken place in the quotations. The show of samples has not increased, although the exports from China have considerably exceeded previous estimates.

A commercial letter from Hong Kong to the 7th of June brings the following information in reference to tea and silk:—

Tea.—A settlement of 1,000 half chests Tayshan congou is reported at 26 to 27½ taels. This parcel is by no means among the best offering, and the price given is likely to increase the demands of the dealers, and delay any extensive purchases. Musters of new Tayshan congous and scented kinds continue to be shown, and the quality generally is much inferior to last season. No transactions in scented are reported, but a small quantity of contract teas have arrived. Prices asked are 27 to 30 taels for Tayshan congou; 30 to 35 taels for fine scented orange Pekoe; and 38 to 42 taels for finest; 28 to 34 taels for fine scented capers. The market for Oopacks and Onhams is reported to have been opened in the country, at prices varying from 30 to 33 taels for fine descriptions, laid down at this port. Freights to London, 3l. The Southern Cross is on the berth. Macao.—Small parcels of tea have arrived; but from general information it is expected that no large business will be done at this port. Foochoo dates are to the 30th of May. Tea—The season 1859-60 may now be considered closed; a few parcels of very inferior quality only remaining on hand. Of the new crop, arrivals commenced on the 17th ult., and on the 30th amounted to 30,000 chests; the quality is much inferior to last year, owing to the leaf having become too fully matured before picking, as also from hasty manufacture. The market has been opened, and settlements are reported at 8,000 chests at prices varying from 28 to 32½ taels, short. For the finest chops 33 to 34 taels were asked. Only a few hundred packages of Oolongs and Pekoes have come in, insufficient to form an estimate of the crop. The opening prices in the country are reported to be higher than last season. Souchong—No arrivals. Arrivals—30,000 against 15,000 chests last season; of these 8,000 are contract teas. Freights to London quoted 6l to 6l 10s. Shanghai advices are to the 30th of May. Extreme alarm prevailed owing to the successes gained by the rebels, and English and French troops have been posted at the city gates at the urgent request of the Chinese officials. Business had become completely paralysed, and it is impossible to give correct quotations. Silk—A very limited business has been done, amounting to only 1,200 bales, at previous rates. The remaining small stock was principally composed of common throwns and Taysaams. The new crop was still favourably reported on, and bale samples were expected down in about 14 days. The total export of silk from China to Europe is 67,221 bales,

against 78,154 bales last year, or a decrease for this season of 10,933 bales. Tea—Settlements reported are trifling, and the season of 1859-60 may now be considered closed. The total settlements from 1st of July to date were,—black, 288,200 chests, against 107,700 chests last year; green, 455,000 half-chests, against 470,700 half-chests. Unsold stock—blacks, 5,000 chests, against 13,000 chests; green, 2,000 half-chests, against 5,000 half-chests. No accounts had reached respecting the new season's crop. The total export of tea from China to Great Britain is 78,718,100 lbs, against to same time last year 56,395,000 lbs, or an increase for this season of 22,323,100 lbs. To the United States the export is 30,782,700 lbs, against 29,000,600 lbs, or an increase for this season of 1,782,100 lbs.

IMPORT of TEA in London, from Jan. 1 to July 31, 1860, and the STOCK on hand on Aug. 1, 1860, compared with the corresponding date in 1859.

The quantity of tea now afloat is 10,757,531 lbs, against 6,156,598 lbs at the corresponding period in 1859; and 21,481,579 lbs in 1858.

There has been a steady, but by no means active, inquiry for most raw sugars, on former terms. Refined goods, however, are a slow sale, at the late decline in value.

Advices from the Mauritius to the 6th ult. state that sugar making had been commenced on several estates, and bring the annexed particulars of shipments from the island:—

COMPARATIVE STATEMENT of the SHIPMENT of SUGAR from the Mauritius, from the beginning of each Crop to the 1st July of each Year.

The public sales of coffee have gone off freely at extreme rates; and, by private contract, the market, generally, is very firm.

The annexed report of the coffee trade, dated Colombo, June 26, is forwarded by Messrs Volkart, Brothers:—

The unusually fine weather that has prevailed, with but slight interruption, since our last, permitted a steady progress in exports; the shipments of our principal staple to date are as under:—

PLANTATION COFFEE.

To Great Britain	cwts 354,834	against last year,	cwts	294,876
Foreign Ports	30,391	—	—	38,763
Australia and India	9,150	—	—	6,779
	394,375			340,418

NATIVE COFFEE.

To Great Britain	cwts 73,128	against last year,	cwts	59,350
Foreign Ports	67,269	—	—	109,578
Australia and India	2,376	—	—	4,508
	142,773			173,436

The transactions in Ouvah native coffee have been on a moderate scale; the supply has been limited, and buyers have had to pay more money for the article. All accounts from the interior agree that the continued absence of the usual monsoon rains has had a very serious effect on the coming crop of native, and in many instances on the plantation crop, especially on the lower elevations. The showers have been extremely partial: in many instances a sufficiency of rain has fallen to save the crop, but in the majority of cases there has not been enough rain to set the late blossoms. A few lots of Badulla parchment plantation coffee have been on offer, and these have, in some instances, been taken at slightly below our previous quotations. Plantation coffee, low, 10s 6d to 10s 9d; ditto, mountain, 11s 6d per bhl. Native coffee, unpicked, 42s to 43s; ditto, picked and dried, 45s to 46s per cwt.

There has been a better feeling in the demand for cocoa, and, in some instances, rice has advanced 3d per cwt.

Currants have commanded rather more attention; but other fruit has changed hands slowly.

Hemp has ruled about stationary. The public sales of colonial wool continue to be well attended by buyers, and the whole of the supplies offered this week—about 15,000 bales—have changed hands at quite the opening rates.

"Our price current," observe Messrs Powell and Co., "now shows a reduction in the value of nearly all descriptions of leather; but we are happy to be able to state that a feeling of confidence has been growing throughout the month,—that the sales, at the reduced rates, have been large,—and that the trade has hitherto passed through the crisis most satisfactorily, proving that, beyond the range of the houses that have suspended, a sound and healthy state of the trade is prevalent. It is also important to take into consideration that of the enormous aggregate of liabilities which are shown by the whole of the firms suspended, a very small proportion, probably not more than 10 per cent., represents capital engaged in the purchase or sale of leather and hides. The stocks belonging to these estates must, therefore, be very much smaller than would be supposed, and there is every reason to expect that the removal of so much ficticious business will work a great benefit to all legitimate trade. In raw goods a fair amount of business has been done, considering the circumstances of the market. Although the imports generally have not been large, the stocks on the whole are generally increased. The home trade have bought sparingly, but a demand for exportation has assisted the market. Prices generally have declined, and with a little more disposition to concede in prices on the part of importers, the transactions would have been larger."

Messrs Durant and Co. report the state of the silk market as follows:—

We have had a very quiet month in silk—heavy market, and drooping prices. The reduction, however, has been nothing of moment. The stock is small, and may now be expected to be continually diminishing for the next few months. This has enabled importers to realise the small quantity that has come forward without any decided concession—nothing exceeding 6d to 9d, and in some cases 1s per lb. Within the last few days a better feeling seems to be growing up, although the home trade is still bad, and foreigners generally continue to act as if expecting lower prices. In Chinese thrown silk the demand has again relapsed to the minimum rate of the early months of the year; of this class the stock is unfortunately large. Bengal silk has formed no exception to the general quiet. In Italian silk, we are without any arrival of new silk beyond a few bales. In Brutia and Persian silk nothing.

Messrs Churchill and Sim have published the annexed comparison of the stock of timber in the public docks in London on the 1st August :—

	1860.	1859.	1858.
Foreign deals .....pieces	712,000	719,000	907,000
— Battens, boards, and ends...	600,000	473,000	301,000
— Fir timber .....loads	23,400	35,100	34,500
Colonial pine deals and battens.pieces	215,000	298,000	528,000
— Spruce ditto	308,000	326,000	462,000
— Pine timber.....loads	7,900	3,400	7,800
United States pitch pine timber	4,200	3,600	4,700
East Indian teake	5,500	11,200	11,900

The saltpetre market has shown signs of animation, and prices have tended upwards. The exports of saltpetre from Calcutta to Great Britain, France, and the United States, in the twelve months ended the 31st May, 1860, and the two previous seasons, were as follow, viz. :—

	1860. tons	1859. tons	1858. tons
Great Britain	14,312	18,496	12,263
France	766	994	1,106
United States.....	7,781	6,977	6,425
Total.....	22,859	26,467	19,794

We have very little change to notice in the general position of the spirit market.

Scotch pig iron may be considered steady at 52s 6d cash, mixed numbers.

The oil market has been very firm, and prices have had an upward tendency. To-day, linseed oil has sold at 29s 3d per cwt.

Tallow is a shade lower than on Friday last. P. Y. C., on the spot, is selling at 52s 3d ; September, 52s to 52s 3d ; October to December, 52s to 52s 3d ; and January to March, 52s 6d per cwt. Town tallow, 52s 6d net cash.

"Money is in rather more active demand," says the new York York *Shipping List* of the 28th ult. "We hear of some demand loans at 5 per cent. called in, but the rates for paper remain without noticeable alteration. The wants of the mercantile community for the moment are moderate, but with the incoming of the autumn trade an increased demand from that quarter is certain. Meanwhile, the disposition both at bank and on the part of private lenders is to give the preference to short dates. We quote :—

	Per cent. per annum.
Loans on call, stock securities	5 to 6
Do. other good securities	6 7
Prime endorsed bills, 60 to 90 days	6 6½
Do. 4 to 6 months.....	6½ 7
First class single signatures	6½ 7½
Other good bills	7½ 8½
Names less known	9 10

The following is a comparative statement of the imports of foreign dry goods at the port of New York for the week and since January 1st :—

FOR THE WEEK.

	1859. dols	1860. dols
Entered at the port.....	4,210,023	2,841,629
Thrown on market	4,255,958	2,974,390
SINCE JANUARY 1.		
Entered at the port.....	71,782,934	63,362,687
Thrown on market	71,208,502	63,134,876

General trade is a trifle more active than it has been, but until a fortnight or three weeks hence, we shall probably not witness any unusual animation. About that time, however, the autumn trade may be expected to commence in earnest. Already many country buyers are in town, making preparations to lay in their supplies, and there would seem to be no reason to question the expectation that the purchases will be liberal even for cash and short credits."

MARKETS IN THE MANUFACTURING DISTRICTS.

In nearly the whole of the markets held in the manufacturing districts this week, the transactions almost generally have been somewhat restricted. The home trade is certainly healthy ; but the business done for shipment both to India and China has been somewhat limited, and the quotations have had a drooping tendency. In some instances the stocks have rather increased. Wool is still selling at very high rates, notwithstanding the large quantities now offering at the public sales held in the metropolis. There has been rather more business doing in iron at full quotations, but the coal trade has become rather heavy.

MANCHESTER, Aug. 9.—The market was influenced early in the week by discouraging accounts from India, and also by the unfavourable weather. Prices for shirtings, madapollams, and jaconets generally fell about 1/4d per piece, and the market for yarn was so extremely irregular that it was difficult to give quotations. Latterly, however, a better spirit has been evinced, and a large business has been done to-day in some hands for India at the reduced rates of the week. Other departments are on the whole still comparatively inactive, the home trade more especially ; but there has been a little export demand for yarn, to some extent in sympathy with the large export demand for cotton which has prevailed during the week, the same being also partly taken as an encouragement for renewing purchases of cloths after the severe decline they have lately experienced.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

BRADFORD.—Wool—We are unable to report any improved demand for wool ; the unsettled state of the weather leads to apprehensions of a poor harvest, and makes all parties very cautious. Staplers are generally firm in resisting a decline, and spinners buy nothing but for immediate consumption. Yarns—Spinners continue well engaged for export on contracts made some weeks ago, but we do not hear of many new orders giving out. The home trade is not so animated as usual at this period of the year. Pieces—Manufacturers are unable to realise on their goods the greatly enhanced cost of the raw material, and merchants, although light in stock, buy only for immediate wants, and can in most instances supply themselves out of stock. There are several looms standing in the town and neighbourhood.

LEEDS —The principal demand was for winter goods ; the stocks are now rather on the increase ; but some orders being given out for goods by the foreign houses, the mills continue well employed. Business has been dull in the warehouses since this day week as regards the home trade ; but there is a considerable business doing for the colonies, particularly for the Canadas.

HUDDERSFIELD.—Prices are very well supported, the high prices of wool at the sales being a fact which cannot be disputed, however strange it may appear under all the circumstances.

HALIFAX.—There is no alteration in the state of the wool market. Notwithstanding that better terms are offered by the staplers, long wools continue to go off very slowly, but for noils and brokes there is a great demand, and prices are firmly maintained. In yarns there is very little doing in the home trade, but export houses are operating more extensively, and the spinners are generally working full time. In pieces, business is quiet, the merchants seeming anxious to reduce the stocks on hand, before entering into new contracts.

ROCHDALE.—Wool—We have had a very quiet market, and manufacturers are generally unwilling to give the high prices asked for short wools. Flannel—There has been a good attendance of buyers, and every disposition manifested to do business, but most manufacturers are now asking for an advance of 1s on Lancashire and Welsh imitations. Fine Saxonies are very quiet, owing to the present decline in long wools ; but for all other sorts of woollen goods there is an excellent demand both for the home and export trade. The Yorkshire trade continues very good.

LEICESTER.—The hosiery trade is tolerably active ; there continues to be a fair demand for several classes of goods usually in request at this season of the year, and the workpeople are, on the whole, well employed. The same steady state of things exists at Hinckley, Loughborough, and other country districts. Wools are extremely high in price, and there is very little alteration to note in yarns, spinners having for some time past been well employed.

NOTTINGHAM.—There is less than an average business doing in the lace trade. During the last ten days several small failures have taken place, and business generally is in a very dull condition, nor is there any immediate prospect of improvement. All branches are quiet. In plain goods there is hardly as much doing ; Mechlins are not at all in request, and stiff nets are not so good a sale as they were some time ago. The cotton fancy trade is without much change. In all departments manufacturers are finishing

only what is required, and avoiding anything approaching to large stocks. Many lacemakers are entirely out of work, while others are but partially employed. In silk goods there is very little doing. The hosiery trade has undergone no improvement, nor is any expected for some time to come. A great number of hands are unemployed.

Wolverhampton.—The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latten, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. Welsh bars, 5*l* 10s to 5*l* 12s; rails, 5*l* 5s.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, July 28.—Flour.—The depression which characterised the market at the date of our last writing extended into Wednesday and Thursday, when transactions were on a moderate scale, at prices corresponding with the closing rates of Tuesday last, for all kinds except the lower grades, which are about 5c per bbl lower. The market was more steady yesterday, however, under a moderately active inquiry from the local and Eastern trade, and a fair demand for shipment, under which the sales were tolerably heavy. The total sales for the three days amount to 40,200 bbls, including 15,200 yesterday, closing steadily. Canada flour has been in moderate request, and the lower grades have depreciated 5c per bbl. The sales are 1,350 bbls, of which 350 were placed yesterday, at 4 dols 95c to 7 dols 50c per bbl. Southern flour remains dull and heavy, while the lower grades of Georgetown and Baltimore have depreciated 10c to 25c per bbl. Other kinds are unchanged.

Export, from 1st to 24th July.

	1860 barrels		1859 barrels
Wheat Flour	178,765	.....	56,247

Grain.—The continued scarcity of freight room and rapidly advancing rates tend to materially impede operations in wheat, and the transactions during the three days have accordingly been on a more moderate scale, and confined mainly to the wants of the home trade. In view of these facts, the market has been somewhat heavy, and we reduce our quotations 2 to 3 cents per bushel to correspond with the current rates. The freighting business on the lakes continues somewhat excited, and rates fluctuate considerably, varying during the week from 5 to 6½ cents on wheat from Chicago to Buffalo. The total sales for the three days aggregate 151,500 bushels. The demand for corn has been moderately active, and a considerable quantity has changed hands at full prices for Southern, while Western mixed has varied somewhat, closing with an improvement of one cent per bushel; the sales are 226,000 bushels, at 61 to 62 cents for Western mixed, and 61 for unsound.

Export, from 1st to 24th July.

	1860 bushels		1859 bushels
Wheat	1,134,910	.....	9,026
Corn	145,704	.....	22,734

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Although the weather has been otherwise than favourable to the crops—the progress of which towards maturity is very slow—and although only limited supplies of home-grown produce have been on offer both here and at the leading outports, millers, generally, have continued to purchase with extreme caution—owing, no doubt, to the enormous influx of grain and flour from abroad—and, in some instances, forced sales have been made on rather easier terms. Foreign wheat, however, though in large supply, has been held at extreme rates, of which, however, only moderate sales have been made. The late heavy imports of foreign barley having been cleared off, the barley trade has become firmer, and grinding qualities have produced rather more money. In the value of malt no quotable change has taken place, and the trade has continued in a most inactive state. Large quantities of oats still continue to find buyers; and selected samples have realised 6d per quarter above previous rates. Beans and peas have sold steadily—flour slowly, on former terms. The stocks of foreign produce in warehouse are now rapidly increasing.

One or two patches of Talavera wheat have been cut this week, but at least a fortnight must still elapse ere cutting can become general, even in our most forward counties. The accounts respecting the yield are still very conflicting; but, with fine dry weather, we shall even now, in our opinion, secure a moderate crop, perhaps a fair average one. The spring crops, though backward, are looking well. The yield of both beans and peas is an unusually large one.

The continental markets have not been very active for wheat; nevertheless, full average supplies continue to change hands on English account. Other articles have sold readily at extreme quotations. Large quantities of produce continue to be shipped from American ports to this country, yet prices, owing to large supplies, have further declined.

In Ireland and Scotland, most articles of produce have been in fair request at full prices. The supplies on offer have not increased.

The few samples of English wheat on sale in to-day's market were taken off slowly, at Monday's decline in value. Foreign wheat moved off slowly; nevertheless, prices were supported. All spring corn was very firm; but the demand for flour was much less active, on former terms.

The following report in reference to the floating trade is furnished by Mr Edward Rainford:—Floating Cargoes—There have been 15 arrivals of grain-laden vessels off coast for orders since the 1st instant, viz.:—Wheat, 1 cargo from Hamburg, 2 Taganrog, 2 Odessa, and 2 Marseilles; maize, 1 Sulina, and 3 Ibraila; barley, 2 Ibraila; oats, 1 Genoa; beans, 1 Mazagan. Of these about 4 cargoes were sold before arrival. There has been a good demand this week for grain afloat, and the following prices have been paid:—Wheat, arrived, Marianople (a resale) at equal to 54s 6d; Berdianski, about 54s 6d; Odessa Ghirka, 52s, all per 492 lbs; Galatz at 49s per imperial quarter, and a cargo at 49s 6d per 480 lbs; Ibraila, at 46s 6d and 47s 6d per 480 lbs: on passage, Berdianski about 54s 6d, and Marianople at 55s per 492 lbs; Sandomirka at 55s per 480 lbs. Maize, arrived, Odessa at 33s 6d per 492 lbs; another cargo at equal to about 32s 7d (part of cargo discharged at Syra damaged) per 492 lbs; Ibraila at 32s, 32s 3d, and 32s per 480 lbs (all but one cargo with some slight warmth); another cargo warm and partially discoloured, &c., and only 4 lay days, at 30s 9d tale quale; Galatz, a cargo at 33s per 492 lbs: on passage, Galatz at 33s; Foxanian at 33s 6d and 33s per 492 lbs; Ibraila, 31s 6d and 32s per 480 lbs: to be shipped in September or October, 5,000 quarters at 32s per 480 lbs, and a cargo at equal to 30s 9d per imperial quarter, cost and freight; another at equal to 20s 6d per imperial quarter, f.o.b. at Ibraila; also, 5,000 quarters at 33s per 480 lbs, buyer having option to cancel contract on presentation of bill of lading on forfeiting 1s 6d per quarter. Barley, on passage, Danubian at 25s 6d and 25s 9d: to be shipped or shipping, 3,000 quarters Ismail at equal to about 12s 6d per imperial quarter f.o.b. at Ismail.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—The market is steady, although rather quiet, and prices have not shown any alteration with very moderate supplies in the public sales. Strong refining sorts are steady, and there has been a large amount of

business done in West India, the transactions to yesterday reaching 2,710 casks. 393 casks Barbadoes, by auction, went at 36s to 38s for brown, and 39s to 44s 6d for low to very good yellow. 176 casks grainy kinds partly sold at from 40s to 44s 6d. The week's delivery amounted to 5,480 tons, 5,260 being for home consumption, and the stock is 71,500 tons, against 63,800 tons in 1859. The increase for Great Britain amounts to 18,000 tons.

Mauritius.—The public sales have comprised 4,476 bags, of which about two-thirds sold at previous rates: low to good brown, 33s 6d to 38s; low soft to middling yellow, 38s 6d to 41s; grainy yellow, 42s to 44s; brown and low ditto, 39s to 41s per cwt.

Madras.—1,500 bags native brown Madras have sold at 33s per cwt.

Manilla.—2,000 bags clayed have found buyers at 37s per cwt.

Foreign.—Two floating cargoes of Havana have been sold for near ports: No. 15 to 15½ at 30s; No. 13 at 28s 9d. By auction, 411 casks Porto Rico went at 40s to 46s for low to fine yellow; and 39s to 39s 6d for brown. 52 casks soft Cuba, 37s to 40s for brown and yellow; 887 boxes, 41s to 47s for strong brown to florettes. A few lots grainy white Havana, 49s to 50s 6d. 2,200 bags China were principally bought in: very low to middling brown, 32s to 35s; soft low grey, 37s 6d per cwt.

Refined.—There is not any further alteration in prices, and the market remains rather quiet. Common goods may be quoted 51s; crushed 47s 6d to 49s 6d. Refined has been firmer in Holland.

Molasses.—A parcel of middling Antigua has been sold at 17s 3d; good St Kitt's, 17s; and old Cuba at 14s per cwt.

Rum.—Partial inquiries have prevailed at last week's rates, and holders appear less anxious sellers. Proof Leewards have realised 1s 6d to 1s 7d; Demerara, 1s 9d to 1s 11d per gallon for current to superior quality. The stock is 28,800 puns 5,750 hhds, against 24,000 puns 7,000 hhds last year. Yesterday, a parcel of old Penang sold at 1s 3½d per gallon proof.

Cocoa.—The improved demand for West India last reported has continued, and some few parcels are reported sold by private contract at very full rates. 76 bags Grenada in public sale realised 62s to 65s per cwt for common to good quality.

Tea.—Since the delivery of the letters by the overland mail the market has been inactive, with very little business done. Public sales are declared for the ensuing week. The total deliveries have been about 750,000 lbs larger than in 1859 at this port. The stock in the United Kingdom amounts to 69,000,000 lbs, against 66,500,000 lbs last year.

Coffee.—Imports of Ceylon have been rather large, but the public sales this week contained only 167 casks 406 barrels and bags, which went off at fully previous quotations, ranging from 68s 6d to 74s 6d for fine fine ordinary to good middling, and 77s 6d for good. 1,209 bags native, rather small to good, 60s to 62s. 119 casks 100 barrels Jamaica, good to fine ordinary, 62s 6d to 64s 6d. 70 cases Neilgherry, 75s to 85s. 2,741 bags fine ordinary Costa Rica sold at the full valuations, from 63s to 70s 6d for good ordinary to middling. 37 bales Alexandria Mocha were bought in above the value. A floating cargo of good firsts Rio has sold at 59s per cwt for a near port.

Rice.—Speculators have again been in the market, which is more active and rather higher, owing to the wet weather and probable deficiency in the harvest. By auction, 1,366 bags Bengal sold at 14s 9d for good new pearly white. A great deal of business has taken place privately, mostly in Bengal at 10s 1½d to 14s 7½d; pinky Madras obtained 10s 6d; good Necrancie Arracan, 10s. Two floating cargoes of Rangoon have sold at 10s 9d per cwt.

Imports and Deliveries of Rice to August 4, with Stock on hand.

	1860. tons	1859. tons	1858. tons	1857. tons
Imports	18450	14900	64400	40800
Deliveries for home use	37700	16250	21800	20000
Exported	8300	13250	13000	31650
Stock	45300	71500	92700	44000

Spices.—Black pepper continues firm at the recent advance. 667 boxes cassia lignea, in public sale, went at 2s decline, from 83s to 89s for second and first piles. 163 cases wormy Cochin ginger realised 69s 7½s per cwt. 65 bags pimento were bought in at 3½d, and 10 cases mace at 1s 3d per lb.

Saltpetre.—The Calcutta advices of small shipments and much higher prices have again stimulated the demand, the market closing about 6d higher, and there are not many parcels offering for sale. Moderate transactions have occurred by private contract, the latest being as follows: refraction 6½ to 3½, 43s 6d to 44s 6d; 18¾ to 11, 39s 6d to 40s 6d.

Imports and Deliveries of Saltpetre to August 4, with Stock on hand.

	1860 tons	1859. tons	1858. tons	1857. tons
Imported	8400	12550	6600	10400
Delivered	7700	10750	8800	7100
Stock	4550	4725	4250	5350

Sago.—512 boxes medium grain sold at 16s to 19s per cwt for common to good.

Cochineal.—The market has been flat, and 203 bags in public sale partly found buyers at barely previous rates: Honduras silvers, 3s 3d to 3s 8d; blacks, low, 3s 5d to 3s 8d; other kinds bought in above the value: Mexican silvers brought 3s to 3s 2d; blacks, 3s 5d to 3s 6d per lb.

Shellac is higher owing to the large deliveries last month, and the extremely light stock on hand. Good to fine orange may be quoted at 10*l* to 11*l*. A great deal of the quantity now afloat has also been sold.

Dyestuffs.—There is no change to notice in Cutch, Gambier, or safflower, and the above articles are quiet.

India Rubber has been dull at late prices.

Metals.—The change in quotations have been unimportant, but the market has been firmer. Scotch pig iron was last sold at 52s 6d per ton for mixed numbers. Foreign tin is firm, but not very active: Straits, 132s to 132s 6d; Banca, 136s to 137s. English remains the same as before. Spelter has sold at 20*l* 10s per ton on the spot; 20*l* 15s to arrive. Large sales have been made in lead.

Hemp.—Manilla remains quiet. The market for Russia is steady. On Wednesday, 3,910 bales jute rather more than one-third part sold at the previous value: very ordinary to fine, 13*l* 7s 6d to 20*l* per ton. No business of importance has been done by private contract.

Hides.—The sales of East India went off at ¼d to ½d per lb advance for common to middling, and about previous rates for good to fine. 62,000 hides were chiefly sold.

Linseed.—Imports for the week have been rather large. Considerable transactions are reported in Bombay at 53s; Calcutta, 51s afloat; also in Black Sea and Azoff at 50s per quarter.

Oil.—The market for sperm still shows an upward tendency, fine colonial obtaining 100*l*; American, 99*l*. Common kinds still rule dull. Small sales have been made in olive: Gallipoli, 60*l*; other kinds, 53*l* to 57*l* per tun. There is a better demand for linseed at improved rates, viz., 29s 3d to 29s 6d on the spot; and 29s 6d to 29s 9d for delivery in the last four months. Rape is dearer, owing to the advance in seed: foreign refined, 45s 6d to 46s; brown, 42s 6d to 43s; for delivery in the last four months, 47s is demanded; and 44s 6d to 45s for brown. Fine palm is in steady demand at 45s. Cocoa-nut remains firm: Cochin, 48s 6d to 49s; Ceylon, 46s 6d to 47s per cwt.

Turpentine.—1,500 barrels rough have sold at 8s 9d. Spirits remain dull at 3ls 6d per cwt for American drawn.

Tallow.—Since last Friday the sales in foreign have been of very moderate extent, and prices are rather easier, viz, first sort Petersburg Y.C., 52s 3d; for delivery to the end of the month, 52s; and the same for October to December.

Particulars of Tallow.—Monday, August 6.

POSTSCRIPT. Friday Evening.

Sugar.—The market has been quiet. There were 1,112 hhds West India disposed of during the week. 1,156 bags Madras (imported in 1857) sold at previous rates: soft yellow, 38s to 39s; good grainy, 43s. 875 bags Bengal: fine Bally, 45s to 45s 6d; Gurpatta date, 43s 6d to 44s 6d. 2,600 bags Jaggery Madras have sold afloat at 30s 6d per cwt.

Coffee.—1,160 bags native Ceylon by auction brought 60s to 62s.

Tea.—The sales to-day went off at rather easier rates for low scented capers, and congous sold upon former terms. The catalogues contained 5,070 packages, and about 1,750 sold.

Rice.—10,000 to 11,000 bags sold: white Bengal, 14s to 15s; Ballam, 11s 3d per cwt.

Cochineal.—448 bags only partly sold at the previous quotations: dead grain Honduras, 2s 6d to 2s 11d; Teneriffe grain, 3s 2d to 3s 4d per lb.

Shellac sold at 10 12s 6d to 11*l* for fine orange.

Oil.—380 casks palm sold at previous rates: part sold at 44s 3d to 45s 9d. Cocoa-nut realised 48s 3d to 49s 3d, and 46s 6d to 46s 9d per cwt for Cochin and Ceylon. Sperm sold at 100*l* to 110*l* 15s per tuo, being again rather dearer.

Tallow was quiet at 52s per cwt. By auction, South American part sold at 50s to 52s 6d; East India, 51s 9d to 52s 3d per cwt. Town unaltered.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar continues in a languid state, owing to the unfavourable weather. Prices unaltered. No alteration to note in Dutch crushed.

Green Fruit.—The sales of West India pine apples are of an extensive character. 20,000, per Amy, sold by Keeling and Hunt at public sale, went at prices in character with condition and quality. No improvement in the price of lemons, the stock being heavier than is usual at this period of the year. Nuts in moderate demand, with a speculative inquiry for Barcelona; the new crop being reported short.

Dry Fruit.—Currants are firm. A telegram of the 5th announced rain of a few hours' duration, which would probably retard first shipments.

English Wool.—The market has not improved during the last week, and prices are still in favour of the buyer.

Colonial Wool.—The market remains firm, and the sales progress steadily.

Flax.—Market firm.

Hemp.—Market very quiet this week, and but few transactions to report.

Cotton.—Sales of cotton wool from Friday, 3rd August, to Thursday, 9th, inclusive:—3,000 bales Surat at 2⅝d to 4½d for ordinary to good fair Dhollera, a few very good at 4¾d; 1,300 bales Madras at 3d to 4¾d for ordinary to fully fair Tinnivelly, and 2⅝d to 3¾d for very middling to fair Western. An active demand has prevailed, and a large business has been transacted, particularly during the last few days, owing to the improvement at Liverpool. Prices of fair Tinnivelly are a shade higher, and Western Madras is in better demand at fully previous quotations. The lower descriptions of Surat are also in some cases ¼d per lb dearer, whilst the better kinds have met with a ready sale at the extreme prices of last

week, and the market closes with a decidedly improved tone. 1,000 bales Tinnivelly (a large proportion damaged) and 138 West India are advertised for public sale on Thursday, 16th instant. Active demand to-day at very full prices. Sales, 1,500 Surats at 3½d to 3⅞d per lb.

TOBACCO.—Buyers having supplied themselves very freely for some time, the market has been less active, and sales, in most cases, have been confined to limited selections of good and fine sorts, prices for which remain at previous quotations. 50 tons of Virginia leaf were taken for the navy.

METALS.—Metals fully participate in the prevailing stagnation of business. Copper finds a reduced demand, but prices are unchanged. Iron keeps steady, the Staffordshire makers being fairly off for orders; but Scotch pig has fallen a trifle from last week's rates. Tin continues steady in price and in demand. Spelter has been done in to some extent at advancing prices. Lead has also had some attention, and is a trifle dearer to buy. Tin plates without change.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	55	0
Fat by ditto	2	9½
Yellow Russian	53	9
Melted stuff	38	6
Rough ditto	22	6
Greaves	20	0
Good dregs	7	0

Imports this week 1,957 casks.

METROPOLITAN CATTLE MARKET.

MONDAY, Aug. 6.—The total imports of foreign stock into London last week amounted to 13,484 head. In the corresponding week in 1859 we received 11,626; in 1858, 9,553; in 1857, 8,103; in 1856, 7,216; in 1855 9,566; and in 1854, 8,933 head.

From our own grazing districts, the receipts of beasts fresh up this morning were moderate; but their condition was by no means first-rate. For all breeds the demand ruled heavy, at a decline in the quotations realised on Monday last of fully 2d per 8 lbs. The best Scots sold at 5s 4d per 8 lbs. There was a considerable increase in the show of sheep. Prime Downs and half-breds sold slowly, at previous quotations; but all other breeds were dull, and quite 2d per 8 lbs lower in price. We have to report a heavy sale for lambs, at 4d per 8 lbs less money. About 350 came to hand from Ireland. Calves were in fair average supply, and sluggish request, on rather easier terms.

	Supplies. Aug 9, 1858.	Aug. 8, 1859.	Aug. 6, 1860.
Beasts	6650	4920	4900
Sheep and Lambs	28100	31150	27300
Calves	382	332	355
Pigs	705	490	310

THURSDAY, Aug. 9.—Our market, to-day, was scantily supplied with beasts, for which the demand ruled steady, at fully Monday's currency. The best Scots commanded quite 5s 4d per 8 lbs. The show of sheep was moderate. Prime Downs were, in some instances, 2d per 8 lbs higher in price, and the value of other breeds were well supported, with a steady trade. There was a good sale for lambs, the prices of which were well supported. Calves, though in good supply, changed hands freely, and the quotations had an upward tendency.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	8	Prime Southdown sheep	5	6	5	8
Second quality ditto	3	10	4	2	Large coarse calves	4	0	4	10
Prime large oxen	4	4	4	10	Prime small ditto	5	0	5	4
Prime Scots, &c.	5	0	5	4	Large hogs	4	0	4	6
Coarse and inferior sheep	3	8	4	0	Small porkers	4	6	5	0
Second quality ditto	4	2	4	8	Suckling calves...each	19	0	23	0
Prime coarse-woolled do.	4	8	5	4	Quarter old store pigs	22	0	30	0

Lambs, 5s 4d to 6s 4d.

Total supply—Beasts, 764; sheep and lambs, 11,550; calves, 560; pigs, 310.
Foreign supply—Beasts, 412; sheep, 2,300; calves, 380.

NEWGATE AND LEADENHALL.

FRIDAY, Aug. 10.—These markets are fairly supplied with each kind of meat. Generally speaking, the demand rules steady, as follows:—

Per 8 lbs by the carcase.

	s	d	s	d		s	d	s	d
Inferior beef	3	0	3	6	Mutton, inferior	3	6	4	0
Middling ditto	3	8	4	4	— middling	4	2	4	6
Prime large	4	6	4	8	— prime	4	8	5	2
Prime small	4	8	4	10	Large pork	4	0	4	6
Veal	4	0	5	0	Small pork	4	8	5	2

Lamb, 4s 10d to 5s 8d.

HOP MARKET.

BOROUGH, Monday, Aug. 6.—The accounts from the plantations continue very bad indeed, the vermin being on the increase in nearly every district. The duty is done at 80,000*l*, and prices are firm, with a slight advance on last week's currency. Mid and East Kents, 100s, 126s, 147s; Weald of Kents, 100s, 120s, 130s; Sussex, 95s, 110s, 120s.

FRIDAY, Aug. 10.—There is a very active demand for hops of all descriptions at a further advance of 5s to 6s per cwt. The accounts from Mid and East Kent, Farnham, and Worcester, come daily more unfavourable. Duty, 80,000*l*.

POTATO MARKET.

BOROUGH AND SPITALFIELDS, Monday, Aug. 6.—Since Monday last fair average supplies of potatoes have come to hand in good saleable condition. Most kinds are in steady request, and prices ranged from 80s to 145s per ton. Last week's imports were only 21 tons from St Malo.

WATERSIDE, Thursday, Aug. 9.—The supplies, both coastwise and by rail, at this market, to-day, were limited, and the demand tolerably good at the following prices:—Regents, from 90s to 120s; Shaws, 60s to 90s; middlings, 50s to 60s per ton. Cheshire Ashley kidneys, 3s per sieve.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* 0s to 5*l* 5s; new ditto, 2*l* 15s to 4*l* 10s; old clover, 4*l* to 6*l*; new ditto, 3*l* 8s to 4*l* 15s; and straw, 1*l* 10s to 1*l* 16s per load. Trade dull at reduced rates. Supply large.

CUMBERLAND.—Old meadow hay, 3*l* 0s to 5*l* 10s; new ditto, 2*l* 15s to 4*l* 12s; old clover, 4*l* to 6*l*; new ditto, 3*l* 8s to 4*l* 15s; and straw, 1*l* 10s to 1*l* 18s per load. A heavy demand.

WHITECHAPEL.—Old meadow hay, 3*l* to 5*l* 5s; new ditto, 2*l* 15s to 4*l* 12s; old clover, 4*l* 0s to 6*l* 6s; new ditto, 3*l* 10s to 5*l* 0s; and straw, 1*l* 12s to 1*l* 18s per load. Trade dull.

COAL MARKET.

FRIDAY, Aug. 10.—Wall's-end:—Stewart's 19s—South Hetton 19s—Hartlepool North 15s 6d—Eden Main 17s—Cowpen Hartley 15s 9d—Tanfield Moor Butes 13s—Holywell Main 15s 6d. Fresh ships at market, 43.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 10.—The market is still quiet, but very firm for all current foreign wools, manufacturers only supplying their immediate wants till the harvest be secured, which will have considerable influence on future prices.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 10.—Market steady for wheat and flour at full quotations. Beans 6d cheaper. For Indian corn and other feeding stuffs there is a fair inquiry at late prices.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 10.—There is no change whatever to note in either Staffordshire or Welsh manufactured iron during the past week, and there has been a fair general demand. The market for Scotch pig iron has been quiet, with little fluctuation in prices. Copper still continues inactive, and at present quotations only a limited business doing. Most other metals are without alteration.

The Gazette.

TUESDAY, Aug. 7.

BANKRUPTS.

F. Crockford, St James street, eating house keeper.
E. J. Burn the younger, Brighton, stationer.
E. Candell and H. J. Todd, Greenwich street, Upper Thames street, and Sise lane, merchants.

EPITOME OF RAILWAY NEWS.

TRAFFIC RECEIPTS.—The traffic returns of railways in the United Kingdom for the week ending July 28 amounted to 566,850*l*, and for the corresponding week of last year to 533,510*l*, showing an increase of 33,340*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 251,353*l*, and for the corresponding period of 1859 to 240,917*l*, showing an increase of 10,436*l*.

GREAT WESTERN.—The directors of this company have decided on recommending the payment of a dividend at the rate of 3 per cent. per annum for the half-year ending the 30th of June, leaving a balance of about 5,000*l* to be carried to the present half-year.

LONDON AND BLACKWALL.—It appears that the directors intend to propose a dividend for the half-year ending the 30th of June last at the rate of 3 per cent. per annum.

HULL AND HOLDERNESS.—At the half-yearly meeting of this company, held at Withernsea on Monday, the report of the directors was adopted, and a dividend of 3½ per cent. declared.

GREAT SOUTHERN AND WESTERN.—The report of the directors of this company states that the total traffic receipts for the half-year ending June 30 last amounted to 193,061*l*, and for the corresponding half of 1859 to 175,477*l*, showing an increase of 17,584*l*. The net surplus revenue for the half-year amounted to 97,724*l*.

LONDON AND NORTH-WESTERN.—The directors of this company have resolved to recommend to their proprietors, at the meeting to be held on the 17th inst., a dividend at the rate of 5 per cent. per annum for the half-year ending the 30th of June last, carrying forward a balance of 12,768*l*.

MID-KENT.—The report of the directors of the Mid-Kent Railway Company recommends a half-yearly dividend at the rate of 3 per cent. per annum.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Aug. 6.—The railway market opened at a further decline this morning, and remained heavy during the greater part of the day. In the latest hours of business, a partial rally took place. Colonial descriptions showed little change; Great Western of Canada shares advanced an eighth, and East India stock left off steadily at 99¼ to 100. Foreign railways were generally firm, except South Austrian and Lombardo-Venetian. The Committee of the Stock Exchange have appointed Monday, the 13th, a special settling day in the shares of the Pneumatic Despatch and Labuan Coal Companies.

TUESDAY, Aug. 7.—In the railway market this afternoon, the publication of a satisfactory report by the Lancashire and Yorkshire caused a rise in that stock of ¾ per cent., other railways being also favourably influenced. The heavier stocks chiefly advanced, especially Midland and Great Western. London and North-Western, although higher, was less firmly supported. In the colonial market, Canadian descriptions improved, Grand Trunk leaving off at 31 to ½. East Indian stock remains without change, at 99¾ to 100. No alteration of importance occurred in foreign descriptions; Lombardo-Venetian were last quoted ¼ to ⅜ dis. American securities continue firm, especially the shares of the Illinois Central, Michigan Central, Michigan Southern, and New York and Erie. Mines were quiet, but in some cases higher. Bank of Egypt shares showed a partial reaction.

WEDNESDAY, Aug. 8.—The railway market again improved to-day from the favourable half-yearly reports lately issued, especially those of the Lancashire and Yorkshire and Midland. London and North-Western has been comparatively heavy on unfavourable statements respecting the dividend. Great Western has also receded. In the colonial market, Canadian descriptions continued buoyant. Atlantic and St Lawrence and Geelong and Melbourne shares were quoted higher. Foreign railways were steady, Dutch Rhenish in particular exhibiting a fractional advance. In American railway securities the shares of the Illinois Central were in good demand. The changes in mines were generally unimportant, the principal being a decline in St John del Rey.

THURSDAY, Aug. 9.—The railway market was firm at the commencement, especially South-Eastern stock, which marked as high as 90½, but became flatter in the afternoon. Mines were dull, at an occasional reduction. Bank of Egypt shares were again flat. In miscellaneous descriptions an improvement occurred in Scottish Australian Investment and Van Diemen's Land, and a decline in Berlin Waterworks and Red Sea Telegraph. Victoria debentures, new, were last quoted 109 to ¼; Canadian Five per Cents., 101½; Ocean Marine Insurance, 2½ to ¾ prem.; Universal, ¾ prem.; London and Provincial, ¾ dis.; Thames and Mersey, ¾ prem.; South African Bank, ¾ dis.; Bank of Turkey, 1¾ dis.; and Labaun Coal, 1 prem. City of London Brewery preference shares were dealt in at ½ prem.

FRIDAY, Aug. 10.—A very limited amount of business was transacted in the railway share market, and a further decline took place in prices. In the colonial market, Grand Trunk of Canada declined to 31 and 31¼; Great Western of Canada to 12¾; and East Indian to 99½. Joint stock bank and miscellaneous shares were dealt in to a fair extent. Union of London advanced to 25; Ottoman Bank to 18¾. In the miscellaneous market, Peninsular and Oriental Steam were steady at 76, and the new shares improved to 37¾. British American Land realised 34.

"The temporary relief obtained by means of purgative medicines is purchased at the high price of the aggravation and of the perpetuating the disease."—HENRY, M.D.

NO MORE PILLS OR ANY other Physic.—For Constipation, Indigestion (Dyspepsia), Palpitation, Nervous, Bilious, and Liver Complaints, Debility, Dropsy, Epilepsy, Paralysis, Cough, Asthma, Consumption, Bronchitis, Sore Throat, Fevers.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD, which, at a few pence per day, saves fifty times its cost in medicine, and cures without purging or any of the uncertainties, annoyances, and ruinous expenses incurred by medicine, cod liver oil, or visits to distant climates.

Certificate No. 36,418.—We find it the safest remedy. Andrew Ure, M.D., F.R.S.; Dr Harvey; Dr Wurzer Dr Sherland; Dr Campbell.

We extract a few out of 56,000 cures:—

Cure No. 1,771.—Lord Stuart de Decies of many years' dyspepsia.——Cure No. 49,832.—"Of fifty years' indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting." Maria Joly, of Lynn, Norfolk.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies. ——Cure No. 54,816.—The Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk, of indigestion and liver complaints.——Cure No. 56,814.—Mr Samuel Laxton, Leicester, of two years' diarrhœa.——Cure No. 180.—Mr W. Reeves, 181 Fleet street, London, of 25 years' nervousness, constipation, indigestion, and debility.——Cure No. 4,028. Eight years' dyspepsia, nervousness, debility, with cramps, spasms, and nausea." Rev. John W. Flavel, Ridlington Rectory, Norfolk.——Cure No. 3,906.—"Thirteen years' cough, indigestion, and general debility." James Porter, Athol street, Perth.——Cure No. 58,314.—Miss Elizabeth Yeoman, Gateacre, near Liverpool, of ten years' dyspepsia and all the horrors of nervous irritability."——Cure No. 46,270.—Mr James Roberts, timber merchant, of Frimley, Surrey, of 30 years' diseased lungs, spitting of blood, liver derangement, partial deafness.

Similar testimonials from 56,000 patients who can be referred to.

The food is sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs, 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly; also at 60 Gracechurch street, 4 Cheapside, 330 Strand, 63 and 150 Oxford street, London; and all grocers and chemists.

THE BEST REMEDY FOR INDIGESTION.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple but certain remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." NORTON'S PILLS act as a powerful tonic and general aperient; are mild in their operation; safe under any circumstances; and thousands of persons can now bear testimony to the benefits to be derived from their use.—Sold in Bottles at 1s 1½d, 2s 9d, and 11s each, in every town in the kingdom.

CAUTION!—Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase the various imitations

TO THE NERVOUS AND DEBILITATED

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 12 3, and 6 till 8. Sundays from 10 till 1.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss, 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.

No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.

No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.

No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.

No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.

Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

MEDICAL ADVICE.

DR LA'MERT, HONORARY Member of the London Hospital Medical Society, Registered Licentiate of the Royal Society of Apothecaries, &c., may be CONSULTED on the Functional Derangements of the Nervous and Reproductive System, and on the various forms of Local and Constitutional Debility, from Eleven till Two, and from Six till Eight, at his residence,

37 BEDFORD SQUARE, London.

The 71st Edition—SELF-PRESERVATION: An Essay on the Secret Infirmities of Youth and Maturity, price 6d, or post free, in a sealed envelope, by Mann, 39 Cornhill, or by the Author, for Seven stamps.

CONTENTS.

SECTION I.—The Physiology of the Generative Organs.

SECTION II.—Puberty—Manhood—The Morals of Generative Physiology—True and False Morality.

SECTION III.—Marriage in its Moral, Social, and Physical Relations—Happy and Unhappy Unions—Conjugal Expectancies and Disappointments.

SECTION IV.—Youthful abuse—The Secret Causes of Sterility, Impotence, and other Self-inflicted Miseries.

SECTION V.—Spermatorrhœa, or Chronic Impotence—Its History, Causes, and Moral Consequences—The Sterility of age.

SECTION VI.—The Author's principles of treatment, as applied to these Disorders, Medical, Dietetic, and General, derived from twenty years' practice—Dangerous Results of Empirical Treatment.

THE HUMAN HAIR

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

THE FORTY-SEVEN SHILLING SUITS
ARE MADE TO ORDER FROM Scotch Cheviot Tweeds, and Angolas, all wool, and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. The Two Guinea Dress and Frock Coats, the Guinea Dress Trousers, and the Half-Guinea Waistcoats. N.B.—A Perfect Fit guaranteed.

LAWRENCE HYAM, in announcing that his New Stock of Clothing for the Season of 1860, consisting of the largest and choicest variety of Spring and Summer attire ever designed, is now ready for inspection, and to which he solicits public attention and patronage. The greatest confidence may be placed in the durability and style of all garments, combined with the utmost economy in price.

LAWRENCE HYAM'S 15s and 17s Trousers are made from the choicest patterns in Scotch Cheviots and Angolas, all wool, and warranted thoroughly shrunk. Vests to match, 8s 6d and 9s 6d.

FOR PROFESSIONAL GENTLEMEN.
LAWRENCE HYAM'S Attire for Clerical, Legal, and Medical Gentlemen, is remarkable for sound quality and perfect consistency of design. An unlimited variety of patterns to select from.

FOR THE YOUNG.
LAWRENCE HYAM is everywhere celebrated for the becoming style and finished beauty of his Clothing for Children, Boys, and Youths. Perfectly New Styles in Children's Dresses, Boys' Suits, and Single Garments are now on view, ready for immediate wear.

Observe the only Establishments of Lawrence Hyam are:—City, 36 Gracechurch street; West-end, 189 and 190 Tottenham court road.

FREDERICK DENT, Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

AT HAMBLY HOUSE ACADEMY, Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

VOLUNTEER PIPE.—RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had of the patentee. Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, 53 Great Queen street, London, W.C.

A FINE HEAD OF HAIR. Whiskers or Moustache permanently obtained by ODLRIDGE'S BALM of COLUMBIA, which prevents the hair turning grey, and the first application causes it to curl beautifully, frees it from scurf, stops it from falling off, and if bald soon restores it again, and promotes the growth of new hair. Price 3s 6d, 6s, and 11s per bottle.—Ask for "Oldridge's Balm," No. 22 Wellington street, Strand, W.C.

DR ROBERT ROWE ON INDIGESTION.
This day is published, price 2s 6d, the fifteenth edition,
NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.
By G. ROBERT ROWE, M.D.
"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.
"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.
"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.
Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.
London: J. Churchill, and to be had of all booksellers.

HOLLOWAY'S PILLS.—Biliousness, Sick Headache, Low Spirits.—The stomach becomes deranged from many causes; the consequence is that the bile gets into the blood, and produces nausea, headache, and depression of spirits. These disagreeable symptoms are speedily relieved by Holloway's Pills, which regulate the functions of the stomach, restore the appetite, act healthily on the liver and kidneys, correct every secretion, purify the blood, and expel all unwholesome matter from the system. These excellent Pills ensure the production of healthy gastric juice, without which digestion cannot naturally take place. Thus they remove the foundation of innumerable complaints, acting as gentle alteratives, at the same time giving general tone and renewed vigour both to the muscular and nervous fibres.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is the most durable and beautiful paint known, and does not stain or discolour with the London atmosphere.

CHEAPNESS.—Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

SOLICITORS.

Messrs John and William Galsworthy.
Messrs Rixon, Son, and Anton.

At the Fourth Ordinary General Meeting of shareholders, held at the London Tavern, Bishopsgate street, on Tuesday, the 7th day of August, 1860, the following report and accounts were presented:—

The Directors beg to annex a statement of the accounts of the Company, for the half-year ending June 30.

After the payment of current expenses and the rebate of interest on bills not matured, the profit of the period amounts to £7,929 1s. This sum added to £932 7s 8d, the balance brought forward from the previous half-year, gives a surplus of £8,861 8s 8d.

Up to the time when the accounts were closed the progress of the business appeared to be satisfactory, the net profit, notwithstanding the rise in the value of money, being at the rate of 9 per cent. per annum on the paid-up capital; but the Directors regret to state that large failures in the leather trade have since occurred, by which the Company will suffer considerable loss. It is not possible at present accurately to estimate what the loss will be; in the meantime, however, the Directors feel that they cannot properly recommend the payment of a dividend, and they therefore propose to carry forward the balance to the credit of the next half-yearly account.

In accordance with the deed, three of the present Directors retire by rotation—viz., Robert Diggles, Esq., Mark Hunter, Esq., and John Cheetham, Esq., who, being eligible, offer themselves for re-election.

ABRIDGED PROSPECTUS.

The general scheme and objects proposed to be embraced by this Company may be thus described, viz:—The construction, maintenance, management, and working of such works of irrigation, water transit, and water supply in India, with their auxiliary undertakings, as may, from time to time, be found to be of a profitable character, after the necessary sanction of Government has been secured to each project.

The works selected for first operations, and intended to be immediately entered upon, have been examined by Engineers of the highest attainments and Indian experience, who urgently recommended them for construction by Government as being, in their opinion, amongst the most important, and in promise, the most profitable of their character in India.

These works will consist of:—

Firstly.—Irrigating and Navigable Canals, with all subsidiary works throughout the rich and extensive alluvial Deltas of Orissa and the adjoining districts, receiving their supply from the copious and never-failing waters of three great rivers, the Mahanuddy, the Byturup, and the Brahmany, which, with their affluents, intersect and command the trade and commerce of countries, together much larger in extent than England and Wales, and abounding in agricultural and mineral wealth. The land in Orissa alone, capable of being thus affected, is estimated to amount to about 2,000,000 acres.

Secondly.—A main Irrigating and Navigable Canal, connecting the above works and districts with the Port and City of Calcutta, starting from Balasore and passing by Midnapoor to the Hoogly river, opposite to Calcutta, with all subsidiary channels necessary to irrigate about 2,500,000 acres of good land contained in the surrounding country.

These works were, on their present extensive scale, first brought to the notice of Government in May, 1858, by Colonel Arthur Cotton, in the interesting and able Report, a copy of which will be found annexed to the Prospectus of the Company.

Upon receipt by the Government of Colonel Cotton's plans and statements, they were referred to the Chief Engineer of Lower Bengal, who, with other local Engineers, after investigation, coincided with the views and recommendations there enunciated, and so reported to the authorities. No doubt can therefore be entertained of the value and profitable character of the first undertaking.

The main sources of profit will be:—

Firstly.—The Sale of Water to the Government for the Irrigation of Land.

Secondly.—Tolls levied in respect of the use of the Canals and Water-ways by the public.

To these may be added as available but subsidiary means of additional returns:—

1.—The working of the Canals by the Company by the conveyance of passengers, animals, and goods thereon.

2.—Rent and other Income derived from Mills and Factories established on the banks of the various channels.

3.—Cultivation and Sale of Timber and other produce raised upon the Land of the Company. And,

4.—The supply of Water for general purposes.

Although these latter are now put forth as secondary only, they should by no means be lost sight of,—the first of them has been already ascertained to be highly productive in India, and by the official accounts of the existing Canals in the North-Western Provinces of Bengal, the profits derived from mills, timber, and bank produce, represent a large per centage upon outlay.

In the allotment of shares, preference will be given to those applicants who are Shareholders in the Madras Irrigation and Canal Company, to the extent of the number of shares held by them in that Company, and all future issues of shares in England will be distributed pro rata, amongst such of the then existing Shareholders in the present Company as may be desirous of taking them.

A full prospectus, containing particulars of the terms of arrangement between the Government and the Company, with a form of application for shares, can be had upon request at the Company's offices, or at the Company's Bankers, Messrs Ransom, Bouverie, and Co., 1 Pall Mall east, S.W., but no application will be considered unless a deposit of £1 per share is made. The deposit will be returned without deduction, if the application is not acceded to.

Extract from Lord Stanley's Speech on Indian Finance, on the 14th February, 1859.

I am not willing entirely to pass from this subject of public works without alluding, however briefly, to the amount of return which has been obtained from some of a particular class of works—irrigation, which have been already completed in India. (Hear.)

The Coleroon anicut, opened in 1836-7, cost £21,700; the average net profit yearly for 16 years was £25,700—about 120 per cent. The Godavery anicut was opened by 1852-3; cost £203,000; caused increase of revenue by £44,000; and in a year of drought saved produce to the value of £400,000.

I do not mention the Jumna nor the Ganges Canals, which have been opened about a year and a half, the amount of profits from which is very great, but I am not in a position now to state it exactly. Taking the small examples, we have one canal in Scinde, the Fordwak, of eight miles in length, which cost £2,700, and paid £5,000 in the first year. Another paid 58 per cent. of its cost the first year, and a third which cost £3,600, produced £5,000 in the first twelve months. (Hear, hear.) Of course, in quoting these instances, I do not mean to say that all works of irrigation will be equally productive. I have no doubt that in these works money may be thrown away if they are not done in a proper manner; but these instances show—for they are not necessarily exceptional instances—that if the sites for such works be judiciously selected, and the works themselves be properly executed by engineers who understand the country, there is a possibility of some returning so enormous a profit as not only to cover their own cost, but to repay the expenses of others which may be less successful.

COALS.—"MONTAGUE GARESFIELD," an excellent Gas and Coking Coal. Shipped f.o.b. in the Tyne.—JAMES LAWRIE and CO., 63 Old Broad street, E.C., Sole Agents.

SEQUELIN'S OIL.—This vegetable preparation is most successful as an instantaneous restorative, strengthening weak hair, opening pores of the skin, most effectual in the growth of hair, eyebrows, whiskers, and moustaches, &c., preventing its falling off, giving also brightness, softness, and keeping its natural colour, and checking the most obstinate baldness in two months. One bottle is sufficient. Price, 6s and 10s. The money returned if not effectual. Sold by the Inventor, Sequelin, 40 Wharton street, Lloyd square, W.C., London.

MODERATE PRICES WITH GENERAL EXCELLENCE.

E. MOSES AND SON can confidently assert, that they possess advantages and facilities which are quite beyond the reach of any other House in the Trade, and are thereby enabled to offer a REALLY GOOD ARTICLE AT A VERY LOW PRICE. The most skilful Cutters are employed, and durability of material and workmanship may be relied on.

The BESPOKE TAILORING DEPARTMENT is almost daily replenished from the best Home and Foreign Markets.

The READY-MADE CLOTHING DEPARTMENTS are furnished with an immense assortment of goods for all classes, and all occupations. Also, a great variety of Clothing for Juveniles of all ages.

The HOSIERY and DRAPERY, HAT and CAP, and BOOT and SHOE DEPARTMENTS, contain a carefully selected stock of the best and newest Manufactures.

N.B.—Should any article not be approved of, it will be exchanged, or the money returned.

The Political Economist.

MR GLADSTONE'S LAST FINANCIAL PROPOSAL.

Mr Gladstone made yesterday, rather to the surprise of the public, a new financial proposition. It is only about a month since he gave us a Supplementary Budget, and he then seemed somewhat tranquil as to the future. He explained, indeed, that the possibility of a deficient harvest and the evident stagnation of trade made him unwilling to make any additions on the favourable side to the calculations of February. But he did not appear to intend to make any addition of an unfavourable kind; on the contrary, he seemed confident as to the future. He has now, however, made the following propositions:—

"1. That, towards making good the supply granted to "Her Majesty, the Commissioners of Her Majesty's Treasury "be authorised to raise any sum of money, not exceeding "2,000,000*l* sterling, by the issue of Exchequer Bonds or "Exchequer Bills. 2. That the principal of all Exchequer "Bonds, which may be so issued, shall be paid off, at par, at "the expiration of any period not exceeding six years from "the date of such Bonds. 3. That the interest of such Ex-"chequer Bonds shall be payable half-yearly, and shall be "charged upon and issued out of the Consolidated Fund of "the United Kingdom, or the growing produce thereof."

Few persons had expected that the million of Exchequer Bonds due in November would be paid: even in February Mr Gladstone did not profess to provide for their repayment. He expressly acknowledged that it was a difficulty which he postponed, but no one expected that he would borrow another million. We have on various occasions explained to our readers what we thought of the calculations of the original Budget. We have shown, to the best of our ability, that little reliance was to be placed on the accessions of revenue which Mr Gladstone expected from the increased consumption of the particular articles affected by the present Budget: we will not say that they were not to be hoped for, but we are sure they were not to be counted on. At the same time, we have also expressed on various occasions a strong confidence in the elasticity of the regular revenue of the country, as shown by the experience of the last few years. But we have been careful to warn our readers that this elasticity of the revenue depended on the prosperity of the country; and this prosperity may now be changed into adversity by a bad harvest, and will certainly be impaired by a late and deficient one. We think, therefore, that it is very probable that Mr Gladstone may want the sum which he asks us for.

It is indeed to be regretted that if the proposition was to be made, it did not form part of the Supplementary Budget. It is true that a bad harvest was not certain when it was brought forward; but we hope it is not certain now. It is quite possible that the return of fine weather may again give us brighter prospects. But if Mr Gladstone thought at the time of the Supplementary Budget a bad harvest would render this measure necessary, he should have asked for it at that time. Nothing is so unpopular in a financier as change; and Mr Gladstone has, in fact, given us three calculations of the ways and means for this year. It is true that the money might not have been wanted. At the time of the Supplementary Budget no one could tell that it would; nor can any one for certain tell now; but if the money is not wanted it will not be borrowed. And it would have been better to take power to borrow a month ago, than to make an unusual and unexpected proposal now.

THE NON-LEGISLATIVE FUNCTIONS OF PARLIAMENT.

We hear now, as we almost always have heard at this season of the year, complaints of the inefficiency of the House of Commons. 'They work hard enough,' it is said, 'but they pass nothing. The Government 'brings in at the beginning of a Session many Bills which 'it never hopes to pass, and it withdraws at the end 'of the Session many which every one hoped and believed 'would pass. The 'massacre of the innocents,' which Lord 'Lyndhurst used to ridicule twenty years ago, is not abated 'yet. Many proposals are made—many speeches are made, 'but nothing real is done.' This is the substance of many conversations and of many leading articles, and it may be useful to consider how far it would be wise in us to pay attention to it.

As far as the present Session goes, we might take what lawyers would call an issue of fact. The financial measures of the year are very considerable. We might say that they are enough for one year. Putting the French treaty aside, the simplification of the tariff which Mr Gladstone has this year effected is a considerable achievement. Sir R. Peel would have brought it forward in his most solemn tones, and would have impressed on a listening House of Commons that it was sufficient not only for one Session, but for several Sessions. The ratification of the French treaty, and the alterations consequent upon it, even if they should disappoint its most sanguine admirers, may still be productive of great benefit. At any rate, for this is the point with which we have to deal, they are not nullities; they may be mischievous as their opponents say; they may be beneficial as their advocates say; but substantive measures of one species or of the other they indisputably are. In behalf of the present Session of Parliament we might plead that it has done a good deal; and though some persons may question whether all which has been done was perfectly right, even these dissentients will not be inclined to question its importance.

We wish, however, to raise this week a somewhat larger question. We think it is far too often assumed that the principal functions of Parliament in the present day are legislative. In ordinary conversation it is often assumed that

they are entirely legislative. If it so happens that no important enactment has marked a session, we constantly hear the House of Commons censured as if its time had during that session been entirely thrown away, No mistake, however, can be much greater. There are other functions of Parliament to which an attentive student of living politics will assign as much importance as to the legislative.

In the first place, there is the old but still important function of watching and checking the Ministers of the Crown. We must not estimate the value of this by the actual cases in which we see it exercised. All checks are valuable, not in proportion to the vices which they discover, but in proportion to the vices which they prevent. No one, who has ever watched the administration of an absolute Government closely, can doubt that the vigilance of a popular Legislature prevents even the contemplation of many iniquities which under a quiet despotism are tacitly and easily perpetrated.

But there is a second and far more important function of Parliament even than this. One great function of a popular Legislature is to express the opinion of the people who elected it. During the present session of Parliament the opinion of the English people has been emphatically and efficiently expressed upon several points of the greatest importance. Upon the whole Italian question, complex as it is and many as are the issues it involves, the English opinion has been brought out in Parliament clearly and decidedly. We have said simply and clearly we will not interfere between the subjects of the various Italian Governments and these Governments. We will not, even for the sake of Italian freedom, intervene in contests between nations and their rulers. We hold as a principle that it is useless to do so; for, as an all but universal rule, a nation which cannot conquer its freedom will not keep it when it is conquered for it. The *test* of its being fit for liberty is its being ready to make the sacrifices needful to obtain it. Such is our policy in a purely domestic struggle with which no foreign Government interferes. But, on the other hand, if other nations, for whatever purpose, intervene, we must reserve the right of intervening too. We will not help subjects against their rulers, but we will not permit despotic Governments to put down a struggle for liberty in any country save their own. In the same way a very distinct opinion was pronounced on the annexation of Nice and Savoy to France, and an equally distinct one in favour of the volunteer movement at home. We select these points instead of others, because upon them no action has been requisite. It may be argued, and, indeed, it has been argued, that all which has been done in Parliament on these matters was 'mere talk.' But those who so think have simply no conception of the nature of a popular Government. In such a Government it is not too much to say that 'speech is action.' The adequate expression of the real opinion of an influential nation is of incalculable importance, because that opinion, if thoroughly brought out, may have incalculable weight.

Nor can it be said that the expression given by Parliament to English opinion is inadequate. We might paradoxically say that it was adequate on the whole, because it was imperfect in detail. All but the highest class of speakers doubtless give a very imperfect account even of *their own* sentiments, but in one sense their deficiency in eloquence is a merit. We want to express by means of Parliament *not* the opinion of our most eloquent or our most skilful statesmen—not the opinion of Mr Gladstone or of Lord Palmerston, but the opinion of the average Englishman—of the mass of the English people. From the hesitating accents and ill-formed sentences of a hundred different members of Parliament, this opinion gains an expression which is adequate to it—which is almost the only one adequate to it—which is absolutely the only one of which it is impossible to deny the genuineness. In the present state of mankind, when so large a part of the civilised world is governed by despotisms which do not permit the expression of public opinion at all; when another considerable part is governed by extreme democracies which provide no adequate organ for expressing the true opinion of the educated classes, it is impossible to overrate the importance of the English Parliament—of the most efficient instrument for expressing the practical opinion of cultivated men which the world has ever seen.

We must remember, too, that Parliament should have credit for much which does not pass within its walls. The proceedings supply an invaluable thread for public discussion both in the press and in society. Every one who has to watch public opinion knows that it is idle to write articles upon subjects which the public is not interested in. The best articles on such subjects will lie unread. But how is the public to be interested in a subject? The public is a very miscellaneous multitude. How can all that multitude be made to take an interest *at the same time in the same thing*? Only by Parliament, the great national institution in which every one takes some interest, discussing that subject, and, if we may so say, advertising it to the nation. The discussions in Parliament not only express public opinion; they consolidate its formation by rendering an efficient discussion in practice possible.

We are anxious not to be misunderstood. We are far from saying that all the time of Parliament is usefully spent. We know that much of it is by no means so spent. We are far, too, from saying that much valuable legislation is not unnecessarily postponed. We only say that we must not measure the efficiency of Parliament entirely by its shortcomings. We must remember that it has other functions besides legislation, in which, perhaps, it succeeds better—in which it, at any rate, succeeds to some extent.

WHY ARE THERE SO MANY SMALL FAILURES?

The numerous though small failures which have recently occurred, not in a single branch of trade, but in all branches, have naturally attracted much attention among men of business. We have not for a very considerable time had so many failures of this class, and it is commonly asked what are the peculiar circumstances which cause them to happen now rather than at any other time. The question is not one to which it is altogether easy to reply completely, but we believe it may be in some degree answered thus.

In modern commerce there is, as a rule, a certain per centage of unsound trading at all times. The nature of that commerce almost ensures that such shall be the case. It is carried on everywhere largely—in England and in America very largely—upon credit, and in every extended system of credit there will always be much which rests upon an erroneous foundation. However careful discounters and money-lenders may be, they must make many errors. As the magnitude of our commerce increases, the difficulty of knowing the exact circumstances of those who carry it on increases also. Even within a few years the number of firms engaged in extensive transactions was much smaller than it is now. The difficulty of ascertaining who are worthy of credit and who are not is on the increase. Railways and other means of rapid communication, however advantageous in other ways, are disadvantageous in this. They enable a person resident in a small country town to carry on business on a large scale in London, in Liverpool, or almost anywhere. Formerly, if he had engaged in any unusual speculations, he would have been obliged to go and reside near the market to which these speculations had reference, but now he feels no such necessity; he can live at a remote spot and transact his business satisfactorily. Accordingly, you cannot in the present day know what a man's business is so accurately as was possible some years since. "What can you know about a man who lives in London?" it used to be said. And now for this purpose, as for many others, the whole of England is fast becoming an extended London. The question who are deserving of credit and who are not, is becoming more and more difficult to answer every day,—and the per centage of undeserved credit which, as a rule, exists, is, we fear, rather increasing than diminishing.

These considerations help us to explain the circumstances of the present moment. Undue credit is but temporary. Any shock to trade—any new disturbing influence—brings unsound traders who live upon it to a stand. And, at present, we have *three* disturbing influences.

First. The extraordinary failures which have recently taken place in the leather trade have had a wider influence than would at first sight have seemed probable. We are not now referring to the remarkable extent to which the speculations of Messrs Streatfeild and others have been able to taint the entire leather trade of the country. Curriers, boot and shoemakers, and whoever else was connected with the article, have in some measure suffered. A system of accommodation bills pervaded all classes, and has produced among

all of them its usual consequences. The crash which has occurred has been surprising, and it has had a considerable effect. It has made bankers cautious. All through the country such large failures have a perceptible influence. They make the banker watch his bills more closely, call in his overdrawn accounts, review his dead loans. This is one cause of the many small failures which are occurring in all parts of the country. As soon as the banker ceases to afford the usual aid, the unsound trader ceases to be able to carry on his business.

A second cause is the peculiar weather of the year. The very exceptional character of the season has affected the ordinary retail operations of trade to a considerable extent. The petty shopkeepers through the country do not sell their summer goods as they usually do, or as they expected to do. They are not, in general, people of large means; and, as a rule, they look to the wholesale house which supplies them for help when they need it. At the 4th of the month they require their bills to be renewed; and, whether these bills be renewed or not, they cannot pay them. If the wholesale dealer has funds of his own to meet the increased demand, or has credit enough with his banker to obtain them from him, all will go well. In that case there will be no difficulty. But if the wholesale dealer is in an unsound state there will be a difficulty. When he is pressed upon by a good many retail customers, he will require a good deal of increased accommodation from his banker, and his banker may not be ready to give it. If the banker has for some time suspected that his customer is in an unsound state and has only waited for an occasion to "pull him up," the fresh demand for augmented accommodation will supply that occasion. It will be refused, and the wholesale house will fail. To some extent, too, the same thing will occur with the retail shopkeepers. Those of them who are in a tolerably sound state, the wholesale house will support; but it will not support the others. From these causes there have been several failures both among wholesale and retail dealers at the present time.

The third disturbing influence at present is the depressed state of trade. The only healthy state of our export trade, the only state compatible with a steady money market, is an increasing state. But our export trade does not increase:—

	£
The exports for the six months ending 30th June, 1860, were...	62,019,989
— — — — 1859.....	63,003,159

And the demand in some quarters, especially in India, is not so active as was hoped. Our imports, it is true, have largely increased:—

	£
The imports for five months ending 31st May, 1860	57,007,638
— — — — 1859	44,968,863

But the quantity entered for home consumption has not in many cases increased in proportion. We may say, therefore, without hesitation, that trade is slacker than it was expected to be, and than we could wish it to be; and it is a familiar fact of experience that a slack time in trade always brings down a certain number of persons who have not capital enough to carry on their business in times when its returns cease to be as rapid as they were.

It is to these three causes, all acting at the same time and in the same direction, that we are inclined to ascribe the great number of small failures which is remarkable at the present time.

ÆSTHETIC TWADDLE *VERSUS* ECONOMIC SCIENCE.

In the faculty of writing nonsense, stupidity is no match for genius. It can never soar so far away from facts; it can never strain itself to imagine such absurdities. Stupidity may often read amiss the realities around it, and may draw inconsistent and illogical conclusions from them; but at least it endeavours to base itself upon its dull observation and its limited experience. Genius looks upon facts with a sublime contempt; it is content to fancy and to feel, and to seek truth, like the German, "in the depths of its own moral consciousness." In the art, again, of misquoting and perverting Scripture, the mere layman is not fit to hold the candle to the religious man:—the man of science and the man of business either ignore the sacred writings or respect them; but the "Professor," the Preacher, or the Controversialist, is so accustomed to use texts as missiles and as weapons and to treat the Bible as if it were an armoury like the Tower, or an arsenal like Woolwich, that all reverence in the handling and all appositeness in the application are apt to be disregarded or despised. Now Mr Ruskin is a man of genius and a man of piety,—and accordingly, in the last number of the "Cornhill Magazine," he favours the world with some views on political economy, which for muddiness and fallacy beat Alison and Sadler hollow; and he presses St Matthew into the service as the warranter and endorser of his nonsense. He undertakes to prove that the labourer ought to be paid without any reference to the value of his work or the demand for his article; and he quotes as his authority the words of the Parable:—"I will give unto this last even as unto thee."

It would be impossible in the compass of a single article to give an idea of the strange misconception of principles and misstatement of facts exemplified in every page of this curious performance; and if Mr Ruskin had been a writer of less extensive reputation and less unquestionable ability, even a single article would have been too much. But he has a confident manner and a brilliant style, many followers who authorise him to think for them, many admirers who sit at his feet and submit to his dictation;—and therefore, though he is simply an artist and not a thinker, though both the close reasoning and the systematic observation demanded by the exact sciences are utterly abhorrent to his nature, and though, in consequence, he is a mere baby and lisps twaddle when he ventures into the field of economic doctrine, he addresses too large an audience to permit us to pass him over in silence. He writes well, too; and his dogmatism which in ordinary men would be offensive, becomes in him almost amusing, both from its *naïve* extravagance, and from the discrepancy of the subjects on which it is here exercised from those on which his habitual studies have qualified him to descant. The sentence with which he closes his farrago of absurdities is a curiosity in its way, and could be matched only by Charles Reade:—

"All this is true; and that not partially nor theoretically, "but everlastingly and practically: all other doctrine than "this respecting matters political being false in premises, "absurd in deduction, and impossible in practice, consistently "with any progressive state of national life; all the life "which we now possess in the nation showing itself in the "resolute denial and scorn, by a few strong minds and faithful hearts, of the economic principles taught to our multitudes, which principles, so far as accepted, lead straight "to national destruction."

We can only give a few specimens of this doctrine, so "everlastingly and practically true."

"The *soi-disant* science of political economy," says Mr Ruskin, "is based on the idea that an advantageous code of "social action may be determined irrespectively of the influence of social affection." Political economy, as Mr R. might have learned from any of its more eminent professors, lays down no "code of social action" whatever. It merely lays down those principles and explains those rules by adherence to which the *wealth* of a nation, and of every class within that nation, may be most surely increased and husbanded,—just as a physician lays down the laws by attention to which health may be secured and life prolonged. But the physician does not tell you—for he does not think—that cases may not arise in which health ought to be risked and life ought to be sacrificed, inasmuch as there are blessings more valuable than health and more sacred than life. Nor does the political economist ever tell you—for he does not ever think—that there are not social objects more important than wealth, social affections more imperious and more lofty than the desire for wealth, social perils to avert which wealth may well and wisely be scattered and foregone. He does not preach, for he does not believe, that the laws which regulate the production of wealth are the only or the holiest laws in "the code of social action;"—he simply expounds them, and confines his exposition to them, because they are *the* laws with which, as an economist, he is professionally and immediately concerned.

The condemnation of political economy as a true science may be seen, Mr Ruskin thinks, in its powerlessness and inapplicability in the case of *strikes*. "Here, at a severe "crisis, when lives in multitudes and wealth in masses are "at stake, the political economists are helpless—practically "mute; no demonstrable solution of the difficulty can be

"given by them, such as may convince or calm the opposing "parties. Obstinately the masters take one view of the "matter; obstinately the operatives take another; and no "political science can set them at one." Here Mr R. is misty in his conception and altogether in error as to facts. Strikes offer a case to which economic science is most specially applicable, on which its teaching is peculiarly forcible and clear, which, were it understood and listened to, it would most effectually preclude or terminate—with regard to which, therefore, it is the very reverse of 'mute and helpless.' But Mr R. seems to be unconscious what the functions of a science are. Science must expound and prove: it cannot enforce and compel. It can only show the folly of strikes: it cannot prevent foolish and angry men from engaging in them. It cannot calm passion: it can only show how costly its indulgence is, and how powerless it must always be in the face of economic laws. Mr R. might preach unselfishness and self-sacrifice for ever, and not prevent or terminate one single struggle about wages. But if economic science were understood and trusted, there never would be a strike again. Operatives would know that, if trade was stagnant or their number redundant, no combinations or turn-outs could raise wages:—masters would know that, if profits were large and workmen scarce, no resistance could keep wages down. In the former case, therefore, no unreasonable demand would be made: in the latter case, no reasonable demand would be resisted. But as long as operatives confuse and irritate themselves by discussions as to whether the profits of trade are not *unfairly* divided,—whether the masters' gains are not larger than they *ought* to be, and their own wages less than they can *comfortably live* upon,—and whether benevolence or rigid justice would not augment their share; and as long as speculative philanthropists like Mr Ruskin partake and encourage them in their errors and unreason, political economy is wise and sound in vain. Strikes continue to desolate and impoverish the manufacturing classes, not (as Mr R. alleges) because economists are 'mute' upon the subject, or because their doctrines are not clear, applicable, and convincing; or because their 'solution 'of the difficulty is not demonstrable' and irrefragable; but because passions and prejudices fostered and backed up, and attractive fallacies urged, by writers like Mr R., prevent them from being listened to.

Mr R. next proceeds to lay down the great practical problems of the day in matters of capital and labour, of which he considers it essential that a satisfactory solution should be found. We must contrive (he conceives), under pain of the utter failure or dissolution of society, to 'fix the rate 'of wages so as not to vary with the demand for labour,' and to 'maintain workmen in constant and regular employ-'ment whatever be the state of trade.' We must also, he insists, 'pay the good and the bad workman alike':—nay he avers that we do this habitually now in nearly all branches but that of manufacturing labour. "The natural and right "system respecting all labour is that it should be paid at a "fixed rate, but the good workmen employed and the bad "workmen unemployed. The false, unnatural, and destruc-"tive system is when the bad workman is allowed to offer his "work at half price, and either take the place of the good, or "force him by his competition to work for an inadequate sum. "This equality of wages, then, being the first object towards "which we have to discover the directest available road, the "second is, that of maintaining constant numbers of workmen "in employment, whatever may be the accidental demand for "the article they produce." The confusion of mind indicated in these propositions is as remarkable as their perverse extravagance; yet the most eloquent of our æsthetic writers gravely promulgates them as the only true gospel of modern life, and the most popular and pushing of our magazines does not hesitate to publish them.

'Pay the good and the bad workmen alike,' says Mr Ruskin. 'Certainly; why not? You pay your physician 'and your lawyer the same fee whether they be skilful or 'unskilful:—why not your bricklayer or your weaver?' In the first place, you do not pay your physician and your lawyer alike, irrespective of the value of their services. For convenience in certain ordinary cases there is a fixed fee, as in the case of cabmen,—the one being regulated by custom, the other by municipal decree. But a country surgeon receives five shillings a visit, where a London physician—who is assumed to be the more valuable adviser, and usually probably is so—always gets a guinea. The apothecary-midwife receives seven and sixpence for an accouchement: Sir Charles Locock receives ten guineas. The ordinary barrister is satisfied if five guineas be endorsed upon his brief: Cockburn, Thesiger, or Creswell used to be secured by a fee of three hundred. But, putting aside these appeals to facts, we wonder whether Mr Ruskin ever reflected that to pay the good and the bad workman alike is to pay the same price for articles of wholly different values, or for half the amount and double the amount of the same article,—a practice surely little consistent with that 'justice' which elsewhere Mr R. so idolises. The day's work of one bricklayer is only half the number of courses of bricks contained in the day's work of another. The piece of calico turned out by one weaver will only last half as long as the piece turned out by another. To compel the purchaser or the employer to pay them both alike is to *rob* the purchaser or the employer, by making him give to the inferior of the two labourers more than his work or his article is worth. To pay them equally, is to give for one article more than it is worth and for another less. It is to encourage bad work; just as to give the same price for a picture by James Jones as for a picture by Edwin Landseer would be to encourage bad art.

'Not at all:' (says Mr Ruskin)—'pay them both alike, 'certainly; but employ the one and don't employ the other.' That is, put into English, "Give them equal wages, but "give one man five shillings a day, and give the other no "wages at all." Greater inequality of wages than this, it might seem, to an ordinary understanding, not easy to conceive. But consider for a moment how this plan would work. The good workman is to have all the employment and all the wages; the bad workman is to have no employment and no wages. But he exists, he must live: and how is he to live under this forced monopoly? Either he must be pushed into other lines of occupation,—whence the same rule would immediately push him out; or he must be supported in idleness by the public purse,—which the public neither would nor ought to tolerate; or he must be supported by contributions from the employed workmen,—which is precisely the plan adopted by the Trades' Unions,—a plan which obviously results in lowering the income (or effective earnings) of the employed workman just as much as competition would have done.

Again: It is very easy to speak of 'good' and 'bad' workmen as if they were two distinctly separated classes;—but it is very foolish and very false. The good and the bad shade off into each other by every conceivable gradation, minute, imperceptible, and infinitely various. Between the highest and the lowest of the 'good,' there will be often a wide distance, sometimes a great gulf;—and to affix the same price to the workmanship of the latter as to that of the former (which Mr Ruskin proposes) would be, as we have said, to rob shamefully the purchaser of the inferior article, the employer of the lower workman. And who is to decide, and how are we to ascertain, where the class of the 'good' ends and the class of the 'bad' begins? How and where are we to draw the line between the workman who, though inferior, is to have full employment and as high pay as the best, and the workman, the best of the 'bad,' who is to have no employment and no pay at all? How reconcile him to the 'justice' of an arrangement which condemns *him* to idleness and destitution, while assigning ample occupation and remuneration to a man superior to him only by some infinitesimal shade of difference?

Thirdly: What *are* 'sufficient' and 'insufficient' wages? Who can determine them? Who will agree about them? Has the term, or can it have, any definite, constant, real meaning? Sir Edwin Landseer thinks 1,000*l* a barely sufficient remuneration for the toil and talent spent upon the "Highland Drovers." Probably he is right. Mr Saunders, a 'good' painter also, thinks himself well paid for an equally elaborate production if he gets 100*l*. Probably he is right too. A first-rate bricklayer insists that he ought to have ten shillings a day, and that less will not 'pay' him, inasmuch as he worked immensely hard to obtain his present skill, and as there are not five men in London who are his equals. Another, also a 'good' workman, thinks five shillings a day adequate wages, and is perfectly aware that his work is not

worth more. What rate is to be fixed? If we split the difference and pay all employed bricklayers seven and sixpence a day, then A is wronged, and B's master is cheated. If we fix the lowest rate, A, feeling himself robbed, becomes discouraged and disgusted. If we fix the highest rate, B's master goes into the *Gazette*, and B falls out of work altogether.

Lastly: The reasoning powers, even of Mr Ruskin, if he had given himself the pains of reflecting for a few moments, would have shown him that his plan of paying fixed wages to all workmen and employing only the good ones, must have the effect of lowering the rate of wages and diminishing the demand for labour to all workmen alike. Take the case of bricklayers. Only good bricklayers are to be employed, and they are to be employed at wages which are 'sufficient,'—that is, which make them comfortable and reward them for being good workmen. These, say, are ten shillings a day. 'Bad' workmen, that is, inferior workmen, *less good* workmen, would be glad to work for five shillings, but are not to be permitted to do so. The cost of houses will, therefore, be kept at a much higher level than it otherwise would be;—fewer people can afford to pay for such houses; fewer, therefore will be built; the demand for bricklayers' labour will diminish; the number of *employed* bricklayers will fall off—the number of *unemployed* will increase; there will be more enforced idlers to be supported; there will be fewer artificially-limited labourers to support them. But even this is not all. Artificially high wages to bricklayers means artificially enhanced cost of houses. This again means high rents: this again means crowded dwellings:—and what crowded dwellings mean a *soi-disant* philanthropist like Mr Ruskin should not need to be told.

It appears, then, that this teacher who rails at political economy, and would substitute socialism for it—who would put an end to strikes by 'the paternal relation,' and maintain high and 'sufficient' wages by equalising the pay of good workmen and of bad—would really, if his theory and practice were adopted, inevitably reduce wages, increase pauperism, cram the poor into crowded dwellings, and encourage strikes by blinding the operatives to the only clear truth which can put an end to them. Yet his teaching, he assures us, is 'everlastingly true,'—and all other doctrine is "false in premises, absurd in deduction, and impossible in "practice."

THE LAST FACTS OF INDIAN FINANCE.

The difficulty of getting at the truth in Indian finance is extraordinary. About nine months ago we received an elaborate despatch from Calcutta, which stated that

	£
The deficit for 1859-1860 would be	6,499,981
— 1860-1861 —	3,359,680
— for the two years	9,859,661

This estimate was doubtless made with care, for it was published at the time in India, and was considered to be the final manifesto of the Calcutta financiers to prove that they did not require any English financier to help them. Its fate, however, has not been fortunate. From a paper just laid before Parliament, it appears that the true figures are these:—

	£
Deficit for 1859-1860	8,981,727
— 1860-1861	7,472,303
— for the two years	16,454,030

The amazing discrepancy of these two sets of figures shows that the system of "estimate" formerly prevailing at Calcutta was radically vicious. Under a good system no such errors of millions would be possible. Mr Wilson is at present endeavouring to introduce a more efficient machinery; and it conclusively appears that an English financier was wanted, if not to get money, at least to say what money would be wanted.

One of the most remarkable facts of Indian finance has not received so much attention as it merited. We mean the very slight effect which the Sepoy mutiny had upon the revenue. In

	£
1856-7, the year before the mutiny it was	33,373,026
1857-8, — of —	31,705,776
1858-9, the year after the mutiny	36,060,788

And as those figures represent not estimates, but results, we believe they may be relied upon. No narrative, however graphic or accurate, could convey a better notion of the limited nature of the Indian mutiny than these figures. The ordinary course of life must have gone on much as usual. The first thing which is affected by a civil war is in general the public revenue; and in general nothing else is affected to so great an extent. A disturbed country does not and cannot yield the same revenue as a tranquil one. As soon as the industry which produces the means of paying taxes is interfered with, these taxes cease to be paid. If the rebellion be largely sympathised with by the nation, even those who do not take arms, refuse immediately to pay the tax-gatherer. In a word, if there had been a rebellion of the population of India, we should have had *no* revenue; if there had been a military mutiny to which the body of the people heartily wished success, we should have had *little* revenue. But, as the mutiny was one of soldiers only, as no one else wished success to it, as no one else aided it, we have had a *nearly* unimpaired revenue.

So much of the past; of the future it is difficult but not impossible to speak. The present deficit of India may be roughly stated at 7,000,000*l*, of which 3,500,000*l* is expected to be supplied by the new taxes which have been imposed, and 3,500,000*l* is to be met by a reduction in expenditure. How far either of these may be possible it is difficult to say—difficult even for those on the spot—impossible for any one at a distance. But we own that we are more hopeful as to the increase of the revenue than as to the diminution of our outgoings. It is not sufficiently remembered that we have reduced our outgoings to a great extent. Let us compare the estimates of 1860-61, with the facts of 1858-59:—

	1858-59. £		1860-61. £
Charges of collecting revenue	6,349,168	.....	7,154,911
Civil and political establishments	4,015,326	.....	3,397,746
Judicial and police charges	3,893,971	.....	4,000,800
Buildings, roads, and other public works	4,287,766	.....	4,390,300
Military charges	21,080,948	.....	15,276,320
Marine charges	985,945	.....	888,900
Charges of Eastern settlements	95,452	.....	112,623
Mint charges	143,594	.....	255,300
Interest on debt in India	2,738,623	.....	3,124,070
Charges in India	43,590,793	.....	38,600,970
Home charges, excluding stores	6,051,566	.....	5,357,993
	49,642,359	.....	43,958,963
Interest on railway capital guaranteed	606,016	.....	1,276,000
	50,248,405		45,234,963

Showing a reduction of 6,000,000*l* in the military expenditure alone. We believe that by an efficient police system this branch of our expenditure may be further reduced considerably. And we shall be rejoiced to hear of any other reductions. But a diminution of expenditure is not an easy matter in ordinary countries, where the Government and people are of the same race, have the same interests, and are influenced by the same motives. And in India, where an alien race governs an enormous population, such reductions are more difficult still. We hope to hear of them, but we scarcely like to count upon them.

With respect to the new taxes recently imposed, all the recent accounts are very favourable. There is nothing new perhaps for a writer here to say about them. But those who have had the best Indian experience have lately said a great deal which is very valuable. Sir B. Frere in particular, whose name is renowned in India, and who preserved Scinde to us during the mutiny with most scanty resources and in a manner nearly marvellous, has shown by a very copious array of authentic facts, that the new taxes, so far from being opposed to native usages or customs, are exactly the sort of imposts which the native financiers resorted to, with the difference that our taxes are comprehensive and just, while the native ones were unequal and partial. We print his memorandum on another page, and it well deserves reading, not only for the important facts which it states, but also for the graphic, though grave style in which they are told. The peculiar circumstances of Indian employés and the amount of writing which is expected from them, have developed a union of literary power and practical sagacity that is unexampled among Englishmen, and that has scarcely been equalled either in ancient or in modern times.

FRENCH TAXATION.

III.

INDIRECT TAXES.—EXCISE.

The inland revenue or Excise system of France is much more complicated, and if possible more strict and vexatious than our own. This is greatly owing to the fact that three of the main articles of consumption, and three, fiscally speaking, of the most profitable, are partly of home growth and partly imported from abroad:—we refer of course to sugar, salt, and tobacco. We shall first speak of sugar.

Sugar imported into France is subject, as with us, to various rates of duty according to its various qualities, which qualities are ascertained, as in England, by reference to a fixed standard in which colour, grain, and saccharine strength are all considered. But, in addition to this, the rates chargeable on each quality vary further according as the sugar is colonial or foreign; according as it comes from colonies east or west of the Cape; according as it comes from European ports or from the country of its production; and finally according as it is brought in French or in foreign bottoms. A more complicated tariff could not well be conceived.

But there is a yet further complication. We have hitherto spoken of cane sugar brought from abroad and subject to Customs dues. But a large proportion of the sugar consumed in France is of home growth, the produce of that far-famed beet-root manufacture which the first Napoleon forced into existence by immense protective duties, partly in order to replace or supplement the foreign supply which was so grievously interfered with by his constant wars with a rival which commanded the seas, and partly in order permanently to injure that rival by depriving her and her colonies of the lucrative market of France. Not only had French colonial sugar a large protection as against foreign sugar,—a protection which still remains; but for a long series of years, indeed till very recently, beet-root sugar had a large fiscal advantage secured to it over its colonial competitor. By the law of July, 1856, however, the duties on the colonial and home-grown articles have been equalised.

In order, however, to secure the duty on the sugar made in France, a very rigid system of surveillance has to be exercised. The building in which the manufacture is carried on must be isolated; must be surrounded by a wall; must have only one entrance; and must have iron bars of a certain thickness to all its windows. The warehouses in which the completed sugar is deposited are under the locks of the authorities, and everything which enters or goes out is duly registered, watched, and must be notified beforehand. Further, every manufactory, a month before it can commence operations, must deposit with the administration a detailed description of its locality and apparatus; and at the beginning of every year must give notice of the precise proceedings it means to employ for the extraction and refining of the juice, as well as of the hours of work fixed for every day of the week; and no change can be made in any particular without special notice previously given. Moreover, the loaf sugar cannot be turned out of the moulds, except in presence of the Government officer, who keeps an account of number and weight. Thus every detail of every process is subjected to the supervision and control of officials, who in their turn have to be controlled and supervised by others. The duty on native sugar is not demanded when the manufacture is completed, but only when it is taken out of the bonded warehouses for actual consumption; and even then a credit of three months is given, and on all payments of 300 francs and upwards a further discount at the rate of four per cent. per annum is allowed.

This year the yield of the sugar duties was as follows:—

	f		£
Colonial sugar	58,000,000	or	2,320,000
Foreign	23,000,000	—	920,000
Beet-root	66,000,000	—	2,640,000
	147,000,000	—	5,880,000

Salt.—The duty on salt, whether imported from abroad or produced at home, used to be very heavy, but has undergone many changes and reductions: in 1848 it was fixed at 10 centimes per kilog. or about one halfpenny per lb; at which it stood till very recently, but we believe that last year it was again reduced one-half. A certain proportion of the salt consumed is brought from Algeria and other colonies, and some from foreign countries; but the principal amount is manufactured in France, from sea water, salt springs, mines, and marshes. No one may extract salt from any of these natural sources without previous notice and official authorisation. This authorisation is refused if it be supposed that the quantity to be obtained is likely to prove insufficient to repay the cost of supervision. If the authorisation be granted, the fabricator must surround the place with a high wall which must have only one gate. Near this gate must be erected a building for the residence and bureau of two officials. In the larger establishments, and more especially in those situated near the sea, the inclosing wall must have a pathway *two metres* (80 inches) wide going all round it, both within and without, for the convenience of the official guard; and as soon as the salt has attained the condition of solidity, all further processes are interdicted except in the presence of the authorities. No salt can of course enter or leave the building without permission and registration; and for a distance of ten miles round the establishment, no salt, nor any material from which salt can be extracted, may be conveyed without a permit, and except in the day-time. Salt for curing fish is exempt from duty, but the exemption is guarded by regulations of such extreme severity as greatly to diminish the value of the boon.

We cannot ascertain the several sums collected respectively on imported and fabricated salt, as a great portion of the duty due on the latter is levied by the Custom House officers. But the aggregate contribution to the revenue of all the salt consumed in France is 35,000,000 for 1,400,000*l*.

INDIAN FINANCE.

Minute, by the Hon. Sir H. B. E. Frere, dated 24th April, 1860, showing that the taxes now proposed to be levied in India are in accordance with the practice of the natives themselves:—

There is one point in the objections which have been raised to Mr Wilson's financial measures which it seems to me has been hardly sufficiently noticed, and which, indeed, I should scarcely have thought required elaborate refutation, had it not been taken up by the press in some parts of India, and by the British Indian (Zemindars') Association in the petition which was presented to the Legislative Council on Saturday last, and urged in terms so plausible as to mislead all but those who are intimately acquainted with native modes of taxation.

I allude to the assertion, that Mr Wilson's scheme is entirely "on the English model;" that "the taxes he proposes are utterly unsuited to India;" that "his plan embraces the introduction into India of direct taxation" (as if it were a perfect novelty) "calculated to arouse all the natives' latent feelings of opposition." That it is, in fact, such a plan as a man acquainted only with England and English modes of taxation would devise, and which any one acquainted with India and Indian modes of taxation would reject as impossible or dangerous.

But how stands the fact? It would be far nearer the truth to say the taxes proposed by Mr Wilson are in principle, and in most of their details, similar to taxes which are almost universal throughout all native States in India, which date from the earliest periods of Indian history, which have never been given up to any considerable extent by any Indian Government till we conquered the country, and that the scheme Mr Wilson has devised for restoring the equilibrium of our finances is precisely such as would commend itself to the judgment of any experienced native financier. No notice is taken of the fact that, during the present discussion, no scheme of fresh taxation has hitherto been propounded by any one, native or European, which would bear a moment's examination, which has not included some form of direct taxation, all more or less partial, inadequate to our wants, or otherwise more objectionable than that selected by Mr Wilson—but all direct taxes, and generally in some form, more or less cumbersome, taxes on incomes—such taxes, in fact, being, from the earliest times, component parts of all native schemes of finance.

It seems to be forgotten that up to 1834-6, taxes on incomes, trades, and professions were levied almost universally throughout British India under various names, and that they were then abolished in parts of Bengal and throughout the North-Western Provinces and Bombay, not because they were in theory bad taxes, but because they were so unfairly assessed and unequally levied, that it was difficult to reform them in their then existing shape. Many able men then advocated their retention, after a thorough reform; but they were not then needed. The imposition of a really uniform and impartial tax would have been ill received by all who had been previously exempted; the finances of India were generally in a very flourishing condition, and there was every prospect that, with the impulse given to trade and agriculture by the abolition of transit and town duties, the land tax, with salt, opium, customs, and other indirect imposts, would have sufficed for all our wants.

Taxes on incomes, trades, and professions were, therefore, abandoned altogether, as unnecessary for purposes of revenue, and but for the costly and disastrous Affghan war, and our many subsequent expensive conquests in India, it might never have been necessary to revert to them; with that necessity we have now nothing to do but to submit to it. It has come upon us, and we must make the best of it; but if it compels us again to resort to direct taxation, it would be only fair in those who know the facts, to admit that the taxes we reimpose are justified by ancient and universal native practice, and that with the solitary exception of the land tax, there is, up to the present day, no class of imposts so general in all native States, as the taxes on incomes, trades, and professions.

They have generally been given up, in all our recent acquisitions, for the same reasons which led to their abandonment in our older provinces. They were partially and unequally assessed, and though not objectionable in principle, they were difficult to reform, and were generally, therefore, abolished, as the least troublesome mode of disposing of them. But I will answer for it, they were never abolished without a remonstrance from the sagacious old native financier, who was generally at the elbow of the European administrator, and who would argue in vain against the abolition of "ancient imposts which brought in money from people who could well afford it, and who never dreamed of claiming exemption from taxation for the benefit of the public exchequer."

In a few of our new acquisitions they were retained and reformed, and are there paid cheerfully, and generally appropriated to purposes of local improvement.

Our example in abolishing such taxes has hardly ever been voluntarily followed by any native State. In a few small States, which have been under the guardianship of European officers, they may have been given up, but, as a general rule, they are still levied in all native States, large or small.

Moreover, the universal practice of a well-governed native State, in extricating itself from financial difficulties, caused by war or famine, by past extravagance, or present demand for more than the current income will afford—is, *mutatis mutandis*, strikingly in accordance with what is now proposed for all India.

It is generally something in this wise. The financial minister represents to the chief or sovereign that the treasury is unable to meet the unusual charge, or that the general revenues have, from temporary causes, fallen short of the sum needed to meet the current charges; the matter is debated in durbar, and at length a scheme is adopted and carried out. A certain amount of pay, perhaps half a month, a month, or two months, graduated according to the necessities of the case, and the favour in which the recipient stands at court, is cut from all departments, beginning with the troops, and ending with the courtiers; at the same time instructions are sent to the fiscal officers to increase the imposts on all who can afford it. Rent-free landholders have to pay a fixed portion of their estimated income, an anna or two in the rupee is added to all land assessments, the artisans and petty traders have to pay extra cesses, and, last of all, "a benevolence," proportioned to their supposed wealth, is wrung from all great merchants, bankers, capitalists, and persons possessed of capital, and living on their means.

Of course this is not effected without remonstrance and strong opposition. The Rajah is besieged, now by a body of retainers clamouring for their full pay—now by a band of blacksmiths, and shoemakers or cultivators, declaring they must starve—by a favourite indignant at the clipping of a stipend—or by a deputation of merchants and bankers complaining of the badness of trade, and hinting that "such heavy imposts must compel them to shut their shops, and give up business." His Highness is fortunate if his minister has anything like a uniform principal to urge as an argument to parry such demands for exemption—if he can reply that "the uniform rate is so many annas in the rupee of income, or so many days' pay, or estimated profits, and that all must pay alike." But even in default of such an argument, the assertion "that the money must be had, that the needs of the State must be provided for," is generally admitted as valid. The two points most stoutly contended for by the tax-payer, are that the imposts shall not be permanent, and that too strict inquiry shall not be made into private accounts; permission to assess a lump sum among themselves, and its acceptance under some form which mark it as a contribution to a temporary exigency, generally reconciles the most sensitive body of traders to a demand even larger than their apparent means would warrant. But in one form or another, the levy of a tax on incomes, trades, and professions is successfully carried out.

There is probably no political officer of experience who has not either seen for himself or found on record examples of this kind of general taxation to meet special exigencies in the States to which he has been accredited.

It is true the native Governments have two great advantages over us. They know pretty well where to look for and how to estimate taxable wealth or resources, and they are not bound by any strict principle, and can buy off opposition by concessions to powerful interests.

But, in both respects, the universal and equitable character of the proposed taxes will afford us considerable compensating advantages. Sooner or later all unburied resources must come within the ken of the assessor, and the assertion that all are required to pay alike—European as well as native, the Viceroy as well as the artisan—is a valid argument in the eyes of the native community for taxing all who have the means to pay.

My personal knowledge of the mode adopted by native princes to meet their financial difficulties, is of course confined to the other side of India; but if I am correctly informed, a very similar process is followed by most Zemindars of large possessions in Bengal, and every large and unusual demand on their purses is partly met by demands on their followers and ryots, the former submitting to a deduction of a fixed proportion of pay, the latter to a temporary enhancement of assessment, or in the case of artizans and traders, to a contribution according to their means.

Altogether, I doubt whether there is any part of India where an income tax, and taxes on arts, trades, and professions, are as much a novelty as the income tax was in England when revised by Sir Robert Peel; certainly there is none where such taxes are as new to the people as the income tax was in England, when first proposed by Mr Pitt as a regular part of his financial system.

April 24, 1860. (Signed) H. B. E. Frere.

Agriculture.

THE WET SUMMER.

Now, in the third week of August, a considerable portion of the hay crops in most of the agricultural districts still remains unmade, and some of the grass is even uncut. So long and so expensive a season for haymaking has not before been known in this country, while the quantity of good hay amongst that already made is unusually small. Throughout the season the farmer's hopes have been constantly disappointed. After the cold and backward spring, June proved so extremely wet that in many districts turnips could not be sown, mangold wurtzel hoed, nor any of the usual operations of the period performed. Then, after about ten days of fine weather, the season became so unsettled that two days together without rain have been rather a surprise. But in addition to the excess of moisture, the present—we may say the past—summer has been remarkable for the absence of sunshine and the very low temperature which have prevailed even when there has been no rain. The grain advances towards ripeness so slowly that, here in the South of England, we cannot expect the general harvest until September. Wheat and oats are the best crops, but both are so much laid and twisted by the wet and stormy weather, that the yield and sample must be alike inferior. Beans and peas are luxuriant, but full of weeds from the difficulty in clearing the land during the very brief intervals of dry weather. Potatoes are in many localities affected by disease, and general apprehensions are entertained that more serious losses from disease will occur in this crop than have happened since the first two or three of its appearance.

The accounts from nearly all the agricultural districts tell the same tale. For instances take the following from the monthly reports of the *Mark Lane Express*:—In Nottinghamshire "the corn crops are backward and need continuous sunshine. Wheat has improved, and the flowering season has been favourable; it seems all now to depend on the weather." In South Hertfordshire "grass crops have generally been heavy, so sunny weather has been more than usually required. A considerable quantity of hay is yet in the fields. Wheat changes slowly; the heavy laid crops are quite green, running a serious risk of being mildewed. The clearing of our root crops has been a serious affair." In Lincolnshire the wheat is better, but hay is in a sad state. Here, it is said (Aug. 8), "our corn crops scarcely denote any signs of an approaching harvest, and according to present appearances we are not likely to commence our corn harvest till September." Still fine weather would work a great change in the prospects of the corn crops, but of that there appears to be no reasonable hope. Stock has not thriven very well, notwithstanding an abundance of coarse pasture, but the wetness of the land is most extraordinary, and has more than countervailed the abundance of food.

DISEASES OF DOMESTIC ANIMALS.

Greatly as the treatment of our domestic animals when suffering under disease has improved of late years, there is yet vast room for further improvement. And the pecuniary interests of the owners of live stock concur with the suggestions of humanity to aid the advance of such knowledge and rational treatment of our sick live stock. When any treatment somewhat rough is proposed to a human patient it is commonly designated a "horse remedy," and many of our past—not to say present—methods of treating horses when amiss may certainly, if not legally, be deemed cruelty to animals. Aye, and such cruelty is wholly useless, and commonly absolutely injurious. Take the case of the "Lampas," a swelling with inflammation of the palate just behind the upper teeth, to which young horses are subject, and which, while it lasts, greatly interferes with their feeding. Rest, bran mashes, and a little nitre or other cooling medicine will soon relieve a young horse suffering under these symptoms, for which the olden cure was to burn the roof of the mouth with a hot iron. And we are told by a veterinary surgeon in considerable practice, that he has still great difficulty in preventing many of the farmers from resorting to

this operation, some of them on his declining to perform it having "the lampas burnt down" by the village blacksmith. So again "firing" the horse is constantly resorted to where iodine applications or other milder treatment would prove equally effectual and far less painful to the animal. Timely rest, before injuries have become aggravated or incurable, is the great secret of preserving the working horse in a healthy and useful condition, and one great benefit of more rational treatment of animal diseases is, that it invariably points to such modes of treatment when horses are in work as will prevent disease occurring. So with cattle; the great lesson the intelligent farmer learns from diseases amongst his herd, when judiciously treated, is to avoid or ward off as much as possible the exciting causes of disease.

Lately the homœopathic treatment of disease has been applied to horses, cattle, and sheep, and as many farmers say with great benefit. Without attempting any comparison of the general merits of homœopathic and allopathic systems, we may say that the attention to details, to diet, and ventilation which such an application of the homœopathic system must induce, cannot fail to be of great advantage to our stockowners. Entertaining such views, we read with much interest a lecture and discussion at the *East Lothian Farmers' Club*, which the *North British Agriculturist* reports. The subject marked for discussion was "The Treatment of Cattle under Disease," and a long paper was read by Mr Sydserff, strongly recommending the homœopathic treatment as the only safe and successful method. He referred to "the immense amount of capital represented by live stock, and the vast losses sustained by epidemics, casualties, and unsuccessful medical treatment," as rendering the subject one of great interest to agriculturists. There are no data for estimating the proportion of deaths amongst farm stock; but every farmer knows how necessary it is to have a considerable margin in the farming account for casualties amongst stock. There are insurance companies which insure stock against losses by death; but their rates are so high that the protection afforded would be obtained at the risk of losing all the profit on stock. In serious cases, Mr Sydserff justly says, call in the veterinary surgeon; but "much may and must be done in the way of home treatment. Simple disorders will too often invite simple treatment, and many of the animals on a farm are not of sufficient value to justify the attendance of a professional veterinarian." And he confined his subsequent remarks to horses, thus referring to the particular circumstances of the locality:—"Let the strings of young fresh horses brought from every horse fair within reach, and distributed over the county, testify to the continued drain occasioned by disease. It is a curious fact that some farms are nearly exempt from loss of horses, while others with perhaps far more attention paid to them have frequent deaths. The horse labour in most parts of the country is very severe; to keep the horses up to the mark, and be able to overtake the labour in good season, they must be highly fed. High feeding and hard work involve a delicacy of many of the internal organs, particularly a liability to indigestion and inflammatory complaints. A change of fodder, more particularly from white to bean straw, a long journey, and a hard day's ploughing in an exposed situation during cold windy weather, is frequently followed by an attack of indigestion, spasmodic or flatulent colic, which, if not checked, runs its course, and ends in inflammation of the bowels. Inflammation of the lungs is not uncommon, and cuts off some horses. A considerable number used to sink under influenza, but since the veterinary profession have set their face against bleeding, the mortality has greatly lessened—the farmers' own fleams also being no doubt more seldom used." And he added that nine-tenths of the horses lost in East Lothian die through colic and obstruction of the bowels. Now colic is almost always caused by improper feeding, or by exposure and over-work, or by all combined, and, with very rare exceptions, prevention is in the hands of the farmer and his men.

Then in most cases of colic "the horse has to get the better of the medicine after he has got the better of the disease." Under such convictions he commenced his investigations as a non-professional person into the homœopathic system. His veterinary surgeon disapproved of it, and Mr Sydserff did the best he could to inform himself by reading on the subject. He has since had cases of sickness, "and where not involving surgical aid, every case on the farm has been treated homœopathically for the last two years and a half." He so treated "common colds, influenza, spasmodic and flatulent colic, stoppage of the bowels, and acute founder, and they were all successfully checked before passing into the later stages of these diseases. The fleam, the blister, and the physic ball have been banished from his premises to the infinite benefit of the patients treated," and, with the exception of one case, every horse was fit for use again in a few hours. This is his treatment of colic:—"When a horse is observed ill of cholic, he should if practicable be placed as soon as possible in an airy loose box and clothed, for the surface soon loses its heat, and the cure is a little more tedious when the horse gets cold. Every particle of food must be taken from him, and a clyster of plain tepid water thrown up. I would prefer the funnel enema recommended by Professor Gamgee, as far better than the old syringe. If it will not act it would be dangerous to apply force by means of the syringe, as, if there is any difficulty, another operation familiar to all must first be performed. Plain tepid water, and in moderate quantity, forms the best clyster. The longer it remains on the better, as more of it is taken up by the intestines. If necessary repeat it in a hour. Meantime, give a dose of *aconite*, to be repeated twice at intervals of 15 or 20 minutes. Sometimes the second dose is all that is needed. The aconite keeps down fever and inflammation, and unless you are very positive of the absence of all tendency in that direction, you should always commence the treatment as above. After the aconite give nux vomica, if it is the food which causes the attack, and particularly if the abdomen is full and swelled. If the agony is very great, and the belly tucked up rather than swelled, arsenicum is the appropriate remedy; bryonia, if the attack can be traced to exposure to cold; colocynth, if to green food; cantharides, if to spasm of the bladder. With these remedies I have had the satisfaction of seeing every case yield to my treatment, and some of them presented a sufficiently alarming appearance during their progress. I had one smart case of acute founder, all traces of which had completely disappeared the following morning, without bleeding or purging, or any other than the homœopathic treatment." The master must see to this sort of treatment himself, for his servants commonly are incredulous, and neglect his remedies, or apply some nostrums of their own. Mr Douglas, of Athelstanford, the well-known breeder of Shorthorns, approved of the plans of treatment suggested, "inasmuch as the animal, whether cow or horse, was soon restored to condition." For many years he had seldom lost a horse, but "within the last two years he had lost five valuable horses which were worth at least 250*l*. The disease had generally been violent inflammation, which continued some three or four hours, "and which was not lessened in its progress by any sort of treatment. In truth, the treatment was to a certain extent stereotyped. It was something like colic mixtures, consisting of strong stimulants in the first place, then laudanum, copious blood letting, blistering, or more likely bathing with hot water; while all the time the disease went on its course, the animal making the most painful efforts to relieve itself. And how did the thing end? In a few brief hours all was over. He did not blame the veterinary surgeons at all." The professional man was skilful and assidnous, but the system was in fault, and "nothing more could be done unless homœopathy was to do it." He also referred to the Turkish bath, which had been used in cases of pleuro-pneumonia in cattle with great benefit. Such a bath might be erected for about 30*l*, and would serve a whole district. It is a building with flues constructed round it, and the animal stands in the room and is subjected to profuse perspiration, then washed over and cooled down.

Literature.

ENGRAVING AND SPECIMENS OF BANK NOTES. By HENRY BRADBURY. Henry Bradbury and Co., Fetter lane, Fleet street.

THOSE of our readers who may have chanced to see Mr Bradbury's volume will not need to be told that, in an artistic point of view, it is very well worth looking at. Bank notes are not often thought of as works of art, but the plan of several of those which Mr Bradbury has suggested well deserve to be so considered. They are beautiful and peculiar; they have a simplicity which attracts the mind, and curious *minutiæ* that seem to defy imitation. Mercantile and practical considerations apart, no bank notes that we have ever seen are so good as many of the designs which this volume contains, and we can scarcely imagine in what manner several of them could be improved upon.

Mr Bradbury would, however, we apprehend, be by no means contented with such praise as this. He has a theory on the manufacture of bank notes, and the models which this book delineates were invented to illustrate it. "I conceive," he says, "the object to be aimed at should be to stamp upon the production an *individuality* expressing qualities which are not within the reach of a mechanical imitation. The work which has the genius of the artist impressed on it is not to be imitated by an inferior mind,—no not even repeated by the artist himself." And again:—"In the engraving of the bank note two principles are involved for our consideration: the first, the *simplicity* of its design, the purity of which is the gauge of its perfection; the second, the combination of vignette-work with intricate engine-work; both these principles possess high claims to the attention of banking authorities as security against forgery—the one on account of the difficulty of mechanical imitation—the other on the principle of the certainty of a first-sight recognition. Of the two principles I regard simplicity of design, when it amounts, if I may so speak, to the character of high-class art, as much the best with regard to the issue of national notes. Anything which addresses the mind is more clearly distinguishable than that which addresses the eye—and where variety of pattern and freaks of ornament distract the attention, it is put more within the field of the imitator than when he has to contend with an ideality—for which neither his education nor his pursuits are likely to fit him."

The objects which art should subserve in the manufacture of notes are three. It should make bank notes as *inimitable* as possible; it should make them as *rememberable* as possible; and it should, if possible, accomplish these ends with machinery too costly to be within the reach of the forger. Mr Bradbury considers that his apparatus fully meets the last difficulty of the problem. The extracts we have given show that he thinks he has likewise satisfactorily solved the two previous ones.

With respect to the rememberability of the note, we think few persons who see this volume will question the completeness of Mr Bradbury's case. They will be sure that they would always remember many of the forms he gives, and that they should recognise them easily. The most hurried cashier—and it must be remembered that cashiers are hurried—could hardly mistake them. Mr Bradbury is entitled, if not to the fame of inventing, at least to the credit of developing the principle that high forms of the pictorial art are especially suitable to documents which are to pass quickly and often from hand to hand, because their artistic merit fastens of itself upon the memory, because we "take a fancy" to them. Those who know how unartistic the ordinary forms of credit currency are, will be best able to understand the extent to which this principle has been in practice neglected, and after a little study of Mr Bradbury's model forms they will begin to appreciate the extreme difficulty of applying it, as he has done, effectively and exactly.

With respect to the other requisite of a bank note—inimitability—we think, also, that Mr Bradbury's views are correct, though we will not say that he does not exaggerate their importance. We believe with him that there is no such thing as mechanical inimitability. Whatever one machine, he justly argues, has made, another machine may be made to make. With unlimited capital and unlimited pains, any product of mere mechanism can be imitated. On the other hand, there *is* an undefinable, inexplicable touch in the best works of a great artist which no copyist can acquire, and to which the imitative arts which modern science has developed are to a certain extent unequal. We think Mr Bradbury is right in saying that the issuers of bank notes should as far as possible make use of this artistic inimitability for their own protection, though we are somewhat dubious whether the safeguard given by it may not be exaggerated, and whether Mr Bradbury does not exaggerate it. Still the issuers of notes should despise no element of precaution, and artistic excellence is clearly *an* element.

Mr Bradbury is not, we should think, an advocate for the Act of 1844. If the circulation of the country were still as it was before the passing of that well-known Act—if any one who chose could issue as many promissory notes as he thought fit, Mr Bradbury's notes would be more likely to come into our currency than they now are. If new companies were constantly starting to compete for the circulation of the United Kingdom, some of them would choose Mr Bradbury's model forms. The excellence of these forms would secure them a complete and probably a successful trial. But under the legislation of Sir R. Peel, no new bank, either in England or in Scotland and Ireland, can issue notes, and in consequence the market for new provincial notes is very limited. Old banks have almost uniformly some old note which "works tolerably well:" with which their customers are familiar, which it would be dangerous to change. In consequence, we fear that the home demand for Mr Bradbury's new notes will be more limited than we could wish it to be. But it is possible that issuing bankers who may wish to improve their notes may find some of the details useful for their purpose, though his novel forms for entire notes may not be so. We would especially direct attention to the following passage:—

"The main feature, then, of the note, the engraving, and its security, has been proved in practice as well as deposed to by artists of eminence, to depend upon the vignette. The higher the quality of the artistic impress, therefore, which the vignette carries—the purer and severer the tone conferred upon its execution—the greater the security of the note. My own belief upon the subject is, that this artistic impress may be still further extended to the whole face of the production.

"The great value of the vignette consists in this, that it is the uncounterfeitable seal of the note. I say uncounterfeitable, because, though it may be imitated, its individuality cannot. Let me explain this by a comparison with a picture; it always conveys the style of the artist: we know his composition—his colour—and his *chiaroscuro*—which the component parts of all works of art have—a special individuality, not to be obliterated from our memory and which no copy can possess.

"However similar, there is a difference in the human countenance;—however similar, there is a difference in handwriting. If then any number of the most eminent engravers were to endeavour to copy each other,—there would be sufficient evidence on casual examination to detect it. In a rivalship between them they might produce a work of similar beauty and general effect, but the difference of manner would be obvious to the commonest observer, and not only would the forgery be discovered, but the hand that had executed it would be identified. The eye of the banking clerk, or the man of business, would soon become expert at this kind of fine-art reading. This was proved in the case of the Plymouth Bank half a century ago; their bills were forged, their notes were not, simply on account of the vignette. When the vignette was added to the bills the forgeries ceased."

Colonial banks and foreign banks in countries where the note circulation has not yet taken a stereotyped form should carefully study Mr Bradbury's proporals. He has, we believe, applied excellent practical principles and excellent artistic principles to the subject. His model forms are not merely attractive to the eye; they would be, in our judgment, useful in real banking.

It should likewise be stated that Mr Bradbury's principles are applicable not only to bank notes, but also to debentures, coupons and similar documents. In these there is a very extensive demand for new forms of real merit, and no one who has seen Mr Bradbury's volume will doubt that the forms he has suggested *have* real merit.

Memorials of Thomas Hood. Collected, Arranged, and Edited by his Daughter, with a Preface and Notes by his Son. 2 Vols. Edward Moxon and Co.

We have two complaints to make in respect of these memorials they are too late in coming before the public; and they are too slight and meagre to constitute a durable and sufficient biography. Incomplete as they are, they would have been eagerly read some years ago when the impression of Hood as a humourist was both wider and deeper on the public mind that it is at present, and the sympathies excited by "The Song of the Shirt" and "The Bridge of Sighs" had been just revived by the intelligence of the writer's protracted sufferings and early death. But the only thing the public wanted after this lapse of time, and what there is really a demand for, was a brief, appreciative, and succinct memoir to tell us what manner of man was the author of the two delightful volumes of poetry, by which, as the clarified residuum of much and miscellaneous writing, Hood will be in future known. The work before us is as unlike this as it could well be. It not only appears to be uninspired by any distinct conception of the subject, but, except in one respect, to be hereafter mentioned, scarcely gives us any information by which we may form such a conception for ourselves. We get glimpses of Hood in certain capacities,—as comic correspondent, as invalid, as husband and father, as magazine editor,—but no clear view of the man as a whole, and not even a glimpse of him in that aspect which would most interest us, viz., as a genuine poet. The fact is, the joint editors of this work—which, let us hasten to say, is very creditable to them for the filial care and reverence which it displays—were too young at the time of their father's death to form any adequate idea of his genius and character, even if their close relationship to him had permitted them to do so.

The greater part of these volumes consists of Hood's letters, and, though these are in general too obviously written for the express purpose of amusing his correspondents, and indeed very often resemble his magazine articles, they do throw some light on his social and still more on his domestic character. One thing they show most clearly, and that is that Hood was not only not a mere professional humourist, but quite as humorous and as full of quips and cranks and puns in the midst of his friends and even in his own family circle, as he was in print. He was, in truth, by nature an overflowing and irrepressible humourist. Making the public laugh "from year to year" was altogether an insufficient outlet for his comic powers; he turns into fun his own infirmities, his wife's household arrangements, and the sayings and doings of his children and servants. "Tom and Fanny are quite well," he writes, "poor, dear things, they are the only comforts I have in my goutiness,—namely, by making them sit still because I can't walk about! And that is such a comfort (if you ask the philosophers) to crusty people. My poor legs! I must go and stick them in the sands, as the piles are, to get *mussels* to 'em." The following extract is a good specimen of Hood's harmless and amusing practical jokes:—

At the time I mention he was so weak as to be obliged to be lifted into the coach at starting, but the next day, refreshed by the first breath of the bracing air, he was almost himself. At breakfast he offered to give my mother a few hints on buying fish, adducing his own superior experience of the sea as a reason for informing her ignorance as a young housekeeper. "Above all things, Jane," said he, "as they will endeavour to impose upon your inexperience, let nothing induce you to buy a plaice that has any appearance of red or orange spots, as they are sure signs of an advanced stage of decomposition." My mother promised faithful compliance in the innocence of her heart, and accordingly when the fishwoman came to the door, she descended to show off her newly-acquired information. As it happened, the woman had very little except plaice, and these she turned over and over, praising their size and freshness. But the obnoxious red spots on every one of them still greeted my mother's dissatisfied eyes. On her hinting a doubt of their freshness, she was met by the assertion that they were not long out of the water, having been caught that morning. This shook my mother's doubts for a moment, but remembering my father's portrayal of the Brighton fishwomen's iniquitous falsehoods, she gravely shook her head, and mildly observed, in all the pride of conscious knowledge, "My good woman, it may be as you say, but I could not think of buying any plaice with those very unpleasant red spots!" The woman's answer was a perfect shout. "Lord bless your eyes, Marm! who ever seed any without 'em?" A suppressed giggle on the stairs revealed the perpetrator of the joke, and my father rushed off in a perfect ecstacy of laughter, leaving my poor discomfited mother to appease the angry sea-nymph as she could.

Among the best of the letters are those to a young Prussian officer with whom Hood became acquainted in Germany, and afterwards corresponded in a bantering, affectionate style, bespeaking the freshness of mind and simplicity and kindliness of heart which he retained to the end of his life. These letters, amusing as they are to the public, must have been still more so to the recipient, between whom and Hood it is evident there was a fund of reminiscences and established jokes which it sufficed merely to allude to. Sometimes Mrs Hood would write to this

friend, and then Hood whenever he had an opportunity would interpolate a passage such as the following:—

Hood will copy at the end the direction to be sent on the box. I am pretty well, much the same as Hood, but my wife is not over strong, neither is Jane, and Mrs Hood seems no better than she is, but I hope she will mend and so does Hood. As to Johnny, he is as well as can be expected, but Hood does not expect he shall ever be very strong again; so we must all make the best of it, the editor and all, who seems to sympathise in his ailments with me and Hood and Johnny; but we cannot expect to be better than we are, for he and we have the same complaint, a sort of monthly eruption which we think is better "out" than in; my wife, Jane, and Mrs Hood call it the "magazine." It is a sort of black and white literary rash of a periodical nature, chiefly affecting the head; as yet none of the children have caught it.

Best of all, we think are his letters to children. We must give one or two passages from letters to little friends at the seaside:—

When I was a boy, I loved to play with the sea, in spite of its sometimes getting rather *rough*. I and my brother chucked hundreds of stones into it as you do; but we came away before we could fill it up. In those days we were at war with France. Unluckily it's peace now, or with so many stones you might have good fun for days in pelting the enemies coast. Once I almost thought I nearly hit Boney? Then there was looking for an island like Robinson Crusoe! Have you ever found one yet, surrounded by water? I remember once staying on the beach, when the tide was flowing, till I was a peninsula, and only by running turned myself into a continent.

The next is to a little girl:—

If you can find one, pray pick me up a pebble for a seal. I prefer the red sort, like Mrs Jenkins's brooch and ear-rings, which she calls "red chameleon." Well, how happy you must be! Childhood is such a joyous, merry time; and I often wish I was two or three children! But I suppose I can't be; or else I would be Jeanie, and May, and Dunnie Elliot. And wouldn't I pull off my three pairs of shoes and stockings, and go paddling in the sea up to my six knees! And oh! how I could climb up the downs, and roll down the ups on my three backs and stomachs! Capital sport, only it wears out the woollens. Which reminds me of the sheep on the downs, and little May, so innocent, I dare say she often crawls about on all fours, and tries to eat grass like a lamb. Grass isn't nasty; at least, not very, if you take care, while you are browsing, not to champ up the dandelions. They are large, yellow star-flowers, and often grow about dairy farms, but give very bad milk!

There are no flowers I suppose on the beach, or I would ask you to bring me a bouquet as you used to do at Stratford. But there are little crabs! If you would catch one for me, and teach it to dance the polka, it would make me quite happy; for I have not had any toys or playthings for a long time. Did you ever try, like a little crab, to run two ways at once? See if you can do it, for it is good fun; never mind tumbling over yourself a little at first. It would be a good plan to hire a little crab, for an hour a day, to teach baby to crawl, if he can't walk, and, if I was his mama, I *would* too! Bless him! But I must not write on him any more,—he is so soft, and I have nothing but steel pens.

In a hundred little passages like these, and in some in a different tone, especially in one or two letters to his wife, the pure, simple, and affectionate nature of the man shines out. Though we must end as we began, by saying that this is not exactly the kind of memoir of Hood that was wanted, we must add that, after glancing through it again for the purpose of making the foregoing extracts, we have found it fuller of amusement and interest than the disappointment at not finding it answer our expectations in certain respects, permitted us, on first reading it, to perceive.

CHAPTERS ON WIVES. By MRS ELLIS, Author of "Mothers of Great Men." Richard Bentley, New Burlington street.

WEDDED AND WINNOWED; or, the Trials of Mary Gascoigne. By MARABEL MAY. James Blackwood, Paternoster row.

These tales are written with the professed intention of benefiting the world by a little good advice. They each, after their several fashions, undertake to point out some of the chief impediments to married happiness, and to teach the old, but not yet well-learnt lesson of mutual consideration and forbearance. The purpose is a benevolent, and in Mrs Ellis's case we believe a sincere one. The selection of incident and character in her stories, and the good sense of her observations, show that she has bestowed both thought and pains as to how she may best illustrate her views, and make them acceptable to her readers, in spite of the didactic aim of the tales in which they are embodied. Of the five stories, each a separate "Chapter on Wives," Forest Farm is the pleasantest and best; but they are all carefully written, offering in this respect a marked contrast to "Wedded and Winnowed," whose style, in its wonderful confusion of the parts of speech, can only be compared to some of Mrs Gamp's most eloquent harangues. It is hard to conceive what good the publication of this very foolish book could be intended to effect, beyond the gratification of a vanity on its author's part worthy of the "writer immortalised by Proverbial Philosophy," to whom it is dedicated. It is a jumble of atrocious nonsense from beginning to end. The incidents are incongruous and absurd; the characters are no more like real people than a head cut out of a turnip by an idle country lad is to a human countenance.

"We have," says the preface, "realised grave facts." Marabel May has indeed realised one grave fact. She has shown the pernicious effects upon weak minds of a shallow and pretentious writer; the fact will become graver still if the study of Proverbial Philosophy among its numerous admirers is to lead to the production of more such stories as "Wedded and Winnowed."

GETTING ON. A Tale of Modern English Life. Hogg and Sons.

We have met with this tale before in the pages of a monthly magazine, where its flashy show of cleverness, its slang, and ostentatious parade of morality and religion, were less out of place than in its present form. Those who approve of the general tone of the "Titan" might contrive to read a chapter or two once a month of "Getting On," but we are sure that no taste of any refinement can wade through the two bulky volumes in which it now appears without disgust at its empty pretension. It is vulgar, worldly, and personal, and unites with these qualities a moral tone and power of cant worthy of Pecksniff himself. It is not even clever after its own bad style. It appears to be so at the first glance from its frothy daring, but is so in no one essential. It has no characters, only caricatures; no plot, only the rambling life of a weak and vain young man; and of its style, one example will amply suffice:—

All the air was faint with the heat of that August day, and the scent of many flowers hung low towards the earth. The grass was parched and yellow, the cattle moaned for food. The trees hung heavy for want of heaven's tears; and the sweet abandoned flowers, like maidens wearied with too much pleasure in the ball, lolled their heavy heads, and pouted with open petals for the grief of rain. Ah grief! how soft a joy thou art after satiety of joy. A waving circle of crooked necessity is this life!

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

Some time back I stated that the French Government, after completing the details of the English treaty, would probably endeavour to put down the sliding scale on grain—a much-needed operation, seeing that that scale is every whit as mischievous as the one in England, with in addition some inconveniences peculiarly its own. At first the intention of the Government was to do this in the regular way, that is by passing a bill through the Legislative Body; but after the very illiberal and unworthy manner in which that corps has acted about the rag question—compelling the abandonment of the bill for repealing the prohibition to export rags—the Government, I am told, sees that its co-operation in such an important measure as the suppression of the sliding scale can hardly be hoped for, especially as the said scale has become, since the English treaty, the citadel of protection. Accordingly, I hear that the Government will get rid of the scale in the same manner as it has effected such great reforms in the French tariff—that is by exercising the constitutional power given to the Emperor of concluding commercial treaties. I have reason to believe that overtures have been made, or at all events are about to be made, to Russia, Prussia, and the United States, the three great corn-producing countries with which France has the most extensive relations, to conclude treaties for admitting their grain at all times at a moderate fixed duty, subject to the condition of their making concessions in their import duties on French productions. If these overtures be accepted, and it is to be hoped that they will be, the sliding scale will be annihilated; for, of course, all other nations would be admitted to the advantages conceded to the three referred to. It may be said that the treaties would only destroy one-half of the scale,—that which regulates imports, leaving the other half which regulates exports untouched; but evidently one cannot stand without the other. This is not, I believe, the first time the Government has conceived the idea of putting down the sliding scale by means of a treaty. It seems they entered into negotiations with Mr Mason, the Minister of the United States in this city, on the matter; but his death put an end to them.

The long-continued bad weather has caused fears to be entertained with regard to the crops; and this has led to the strong expression of the wish that the sliding scale may be abolished. At Marseilles, which is the great centre of importation of grain, not two opinions as to the advisability of such a measure are entertained. The *Journal des Débats*, which, as you know, is written and inspired by men of the highest authority in economic science, warmly advocates abolition,—for, in the first place, the sake of agriculturists in the North of France, in order that they may send their grain to England, and so profit by the higher prices which may be expected to rule there,—and secondly, for the sake of consumers generally, in order that importations may be made from the Black Sea before the demand which can hardly fail to come from England shall have sent up prices. Petitions even

praying for the abolition are now in course of signature. In addition to this, it must not be forgotten that last year the Council of State made a searching investigation into the operation of the sliding scale, and the result of it was the demonstration that it was evil and nothing but evil. All these circumstances cannot fail to encourage the Government in the design of upsetting the scale by means of commercial treaties with different Powers; and assuredly they justify an immediate suspension of it by Imperial decree, *en attendant* the conclusion of the conventions.

The practical working of the sliding scale is to prevent foreign corn from coming in when wanted, and native from going out when it might be exported with advantage. It surrounds the trade in corn with great uncertainty and hazard, inasmuch as, for a rise of a few centimes in certain markets, it causes a sudden jump of 2f the hectolitre, or even more, in the import and export duties. It divides France into eight districts, or, as they are called, "classes," in each of which there are different import and export duties, varying according to the variations in prices in certain markets; and the consequence of this is to produce, occa-occasionally, extraordinary differences in the duties on imports levied at the same time in different parts of the country,—Marseilles, for example, paying 22f the hectolitre, when Cherbourg may be paying only 3f 50c. At this very moment the scale is working in such a way as, from high duties, to prevent the export of native corn, and to allow the import of foreign in the third and fourth "classes," whilst in the first and second classes the exact contrary is the case, native being allowed to be exported and foreign being excluded; and observe that the third and fourth classes comprise the important towns of Strasburg, Havre, Dunkirk, Metz, Vannes, Brest; the first and second, those of Marseilles, Bordeaux, Besançon, Nantes.

The Superior Council of Commerce charged to settle the details of the English treaty has now concluded its investigation into the cotton and silk manufactures, and so little remains to be done that it expects, I believe, to complete its labours about the 24th of this month. On the subject of the silk trade the Lyons Chamber of Commerce presented a note which is remarkable for extreme liberality. After showing that the value of all sorts of English silk goods imported into France was in 1855 only 699,405f; in 1856, 759,302f; in 1857, 503,797f; and in 1858, 516,561f; whilst the value of French silk goods exported into England was in 1855, 101,707,930f; in 1856, 117,805,249f; in 1857, 107,219,067f; and in 1858, 103,949,548f,—the Chamber says:—

"These comparative results prove sufficiently the vitality and power of the silk manufactures of France. These manufactures have evidently nothing to fear from any competition, whatever be the degree to which tariffs may be lowered. They can only gain by the new *régime* which the Imperial letter of the 5th January and the treaty with England have commenced.

"Accordingly, in presence of the figures which precede, and of the triumphs obtained in exhibitions, especially in those of 1851 and 1855, the silk trade *cannot think of demanding any protection.*

"French silk goods enter England without payment of any duty; we ought to treat English silks on the same footing, under pain of declaring that the latter are superior to ours, or are sold cheaper. Any demand of protection would be equivalent to an implicit avowal of our inferiority, and would be so interpreted by purchasers of all countries. Even if we feared, which we do not, the competition of the silk manufactures of England, we could not, after the removal of the duties to which she has so liberally proceeded, adopt a line of conduct different to hers. This is demanded, not only by regard for our manufacturing renown, but by our own interest."

The Chamber then says that if the Government for the sake of revenue should think fit to impose a duty on the import of silk goods, it ought not to exceed 5 per cent. *ad valorem.*

Next the Chamber of Commerce goes on to say that the trade of Lyons suffers from the scarcity and high price of silk, and that consequently it is desirable that, in order to facilitate the obtaining of supplies from India and China, direct steam communication between these countries and France should be established; also that a Bank of India and China should be formed. It then makes these observations, which are peculiarly worthy of attention:—

"If the scarcity and dearness of silk continue to increase, Lyons must foresee the day at which she will, no doubt, be obliged to extend the manufacture of silk and cotton, silk and wool, and other mixed goods, in order either to place her productions more within the reach of the consumer, or to aggrandise the circle of her operations.

"At Manchester the manufacturers of pure silk goods make also others mixed with cotton, &c.; and why should not the Lyonese manufacturers, under the pressure of imperative circumstances, do the same? The manufacture of mixed goods was twenty or twenty-five years ago greater at Lyons than it is now, and it may flourish again.

"It is, therefore, a duty for the Chamber, in presence of these eventualities, to demand once again *the free admission of the yarn of wool, cotton, hemp, flax,*—in a word, of all textile matters which can be employed in silk fabrics. On this point the Chamber expresses the formal wish that *yarn shall be classed in the category of raw materials and be exonerated from all duties,* or, at least, that the duties which concern it shall be lowered to the extreme limit of protection recognised to be absolutely indispensable. It expresses the same with regard to chemical productions necessary for dyeing, printing, &c., and which ought also to be classed among raw materials.

"If the manufacture of Lyons repudiates protection for itself, it is on the condition that it shall not continue to pay premiums of protection to the manufactures which supply it with the materials of its labour."

The Chamber afterwards passes in review all the different objects which compose the manufacture of Lyons, and it proposes in accordance with the declaration above quoted, that all similar articles made in England shall be admitted free of duty, with however two exceptions: first, certain species of tulle; and next, imitation of Chantilly lace; and on these articles it recommends a duty of 20 per cent. for three years, and of 10 for two years. The grounds on which it justifies the exceptions are that machines for making silk tulle and lace by steam have not yet been introduced at Lyons, and that the expense of establishing them will be great; also that both time and money will be needed to train men to work them. So attached, however, is the Chamber to commercial liberty, that it makes a sort of apology for asking for protection for these two articles:—

"The solution proposed by its temporary character respects principles; it clearly marks the object to which we must tend, and which every branch of manufacture is bound to attain some day. That object is *absolute free trade*; and the Chamber has not lost sight of it on this occasion."

A gentleman of scientific authority, M. Verard de Sainte Anne, has just published as a pamphlet a copy of a memoir presented by him to the French Academy of Sciences, which sets forth a gigantic project,—that of uniting Europe, Asia, and America, and all parts of the three Continents, by telegraph. To execute this scheme, he proposes to commence a line at Mossoul, in the Turkish Empire, where the existing lines finish; to proceed through Persia and the adjacent countries to the British possessions in Asia, where he will find lines running from Calcutta: from Calcutta he proposes to go straight to Canton, and then to follow the coasts of China to the extreme North: then to go by Behring's Straits through the icy regions to Russian America, and so down to the United States. But this is not all: from Calcutta he intends to carry a line to Singapore, then to Batavia, then to Australia, and then by different groups of islands to South America. He also recommends a line from Mossoul to Africa, and then down the Eastern coast of that continent to the Cape of Good Hope. These plans certainly are of vast magnitude, and it is not easy to see how the lines, if set up, could be maintained in the savage regions through which part of them would have to pass; but M. Verard de Sainte Anne maintains that there is no difficulty which cannot be overcome, and he contends that his proposed lines would not cost much, and would bring in a great deal.

The French cotton-spinners affect to feel the greatest alarm at the coming competition with England to which they are to be subjected; and some of them talk of discharging their workmen and shutting up their mills. But this is all pretence. A proof that they do not feel themselves in as much danger as they say is, that a few days ago at Rouen some shares in a spinning mill, forming part of the estate of a deceased person, were publicly sold by order of justice, and they realised 16 per cent. more than they cost.

The subscription to the loan of the City of Paris of 5,752,360*l* English has commenced this week, and no doubt is entertained that it will succeed.

The Bourse has fallen, and considering the disquieting political views which come in from all parts, surprise is expressed by many persons that it has not gone down still more; but the fact is that it is very thinly attended. The decline in South Austrian Lombard shares has been, it will be observed, rather considerable. The Caisse des Consignations has been making some purchases, chiefly of 4½ per cent. stock. The Bourse was closed yesterday on account of the Emperor's fête. The following are the quotations:—

	Thursday, Aug. 9. f c	Thursday, Aug. 16. f c

The following is the weekly account of the markets, but it cannot be brought down to Wednesday as usual, owing to yesterday—the Emperor's fête—having been observed as a holiday, and consequently not only were the markets closed, but the usual reports

of the preceding day's operations were in many places not published:—

Flour.—The continuance of unfavourable weather has caused prices to advance at *Paris*. Quotations on Tuesday were 61f to 66f the sack of 159 kilogs. In four marks there has also been an advance: current month, 63f 25c to 63f 50c; September, 64f to 64f 50c; October, 64f 75c to 65f.

Wheat.—The usual weekly market at *Paris* was not held yesterday. In the provincial markets, so far as the accounts have been received, we find that 80 have undergone a rise of from 15c to 2f the hectolitre; 22 a fall of from 14c to 1f; and 29 have remained without change.

Cotton.—At *Havre*, in the week ending Friday, as many as 10,173 bales were sold, and only 968 arrived. In some qualities there was a rise; and low New Orleans closed at 81f the 50 kilogs, an improvement of 1f; but very ordinary ditto remained at 92f. On Monday the market was calm, and prices underwent no change.

Coffee.—At *Havre*, in the week ending Friday, business was somewhat more active. 400 sacks Hayti Jeremie went at 77f 50c the 50 kilogs; 600 sacks ditto Cape, 80f; 125 sacks ditto Cayes, for delivery, 77f 50c; 8,050 sacks Rio, not washed, disposable and for delivery, 71f to 75f; 105 sacks Malabar ordinary merchandise, 104f duty paid. Some damaged Malabar was also sold. The arrivals were upwards of 600 bales and 400 sacks. On Monday, 700 sacks Hayti were sold at 78f, and a small lot of Mocha at 131f to 135f. At *Nantes*, last week, there were no sales. At *Bordeaux*, last week, 852 sacks Malabar plantation went at established prices; 351 sacks Rio, washed, 75f; 330 ditto, not washed, 73f to 77f; for delivery, some large lots of Salem went at 80f to 121f; and 225 sacks Malabar plantation at 122f.

Sugar.—The demand at *Havre*, in the week ending Friday, was calmer than in the preceding week; nevertheless, the sales were 1,248 hogsheads French West India disposable at 49f to 49f 50c the 50 kilogs duty paid; 384 ditto for delivery, 49f 50c; 402 casks Havana, 37f 50c; and 3,000 ditto at 36f 75c. The arrivals exceeded 2,500 casks. On Monday, a small lot of French West India was sold at 49f 50c. At *Nantes*, last week, 5,300 sacks Reunion went at 52f, and a small lot of French at 49f to 50f; one of "usine" ditto at 54f to 65f. This week, 650 sacks Reunion have been sold at 52f. At *Bordeaux*, last week, business was not active: 128 casks French West India went at 48f, and a small lot of usine at prices kept secret. Reunion was nominally 52f 50c to 53f.

Hides.—At *Havre*, in the week ending Friday, business was active, and prices of some descriptions rose: 289 dry La Plata cow went at 140f the 50 kilogs; 3,459 Buenos Ayres, salted, 85f; 3,379 Monte Video ditto, 82f 50c; 2,000 ditto ditto, for delivery, 83f 50c; 514 Rio Grande, dry, 130f; 4,320 ditto, salted, 77f 50c to 80f for oxen, and 75f for cow; 6,970 Rio Janeiro, salted, 62f 50c; 900 Pernambuco, drysalted, 97f; 5,850 ditto, 67f 50c; 500 Martinique, salted, 51f; 400 Orleans ditto, 52f; 1,000 New York ditto, 53f to 55f. In addition, some damaged were sold by auction. The arrivals were about 17,000. On Monday, the sole sale was a lot of Lima at 85f.

Indigo.—The demand at *Havre*, in the week ending Friday, was not active; the sales having only been 19 cases Bengal, 3 Java, and the prices of them were kept secret. At *Bordeaux*, last week, transactions were unimportant, and prices underwent no change.

Wool.—At *Havre*, in the week ending Friday, a fair amount of business was done: 155 bales La Plata, unwashed, 2f 5c to 3f 12½c the kilog; 51 bales ditto, washed, 4f 20c to 4f 25c; also some lots of demaged; and 62 bales sheepskins, Buenos Ayres, unwashed, 1f to 1f 55c. The arrivals exceeded 500 bales. This week, some lots of Buenos Ayres have been sold.

Tallow.—At *Havre*, last week, 10 casks Rio Grande went at 65f the 50 kilogs duty paid. The market at Paris was not held yesterday.

Spirits.—At *Paris*, on Tuesday, 3-6 of 90 deg. went at 98f to 99f; Montpellier of 86 deg., 130f.

Turin, Aug. 14.

The subscription to the Government loan has had even greater success than had been anticipated. Messrs Rothschild are stated to have taken 68,000*l* English money; the National Bank 48,800*l*; Messrs Erlanger, of Frankfort, 132,000*l*; Messrs Geisser-Nonnet and Co., 80,000*l*, &c.

TAXATION IN FRANCE.

TO THE EDITOR OF THE ECONOMIST.

Sir,—The article in your paper of Aug. 4, on "Taxation in France," places before the public the gross amount and the chief sources of taxation in that country, but the comparative estimate, as between England and France, is in a form calculated to mislead. The sum voted for our army and navy for 1860, the year selected for the French estimate, is seven millions in excess of that of 1859, without the supplementary vote on account of the China war. *With* that addition, the total voted for the services of the year exceeds seventy-three millions—the amount at which the French revenue for the present year is estimated. But even this cannot be taken as a just comparison of the Government expenses of the two countries. When it is remembered that almost the whole expenditure which with us is local, falls in France under the head of general, and is provided for in the national budget, it must be quite clear that considerable additions must be made to the English estimates. Probably some additions may be made on the French side. I will, however, deal only with our own, and perhaps the writer of the article referred to will be able to respond with additions on a future occasion, that the truth may be fairly sifted. To the seventy-three millions, then, voted for the services of the year by our House of Commons, I would add sixteen millions for county, town, and other local expenses; six millions for the cost of the Established Church; three millions paid by dissenters for the support of their own churches and schools—a very moderate estimate, I believe—making a total of ninety-eight millions. In the face of a sum so gigantic, paid by a population of some thirty millions, it will be some small consolation to find that the estimate on the side of France may be considerably increased. Of this, however, I have great doubts. Begging the favour of the insertion of these remarks,—I am, Sir, yours, &c.,

An Old Subscriber.

COMMERCIAL AND MISCELLANEOUS NEWS.

The *Moniteur* has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month are added:—

Annexed are the principal particulars of the new Treaty recently concluded between the United States and Japan:—Class 1.—All articles in this class to be free of duty. Gold and silver, coined and uncoined; wearing apparel in actual use; household furniture and printed books not intended for sale; all articles of Japanese production, which are exported as cargo, to pay a duty of 5 per cent., with the exception of gold and silver coin, and copper in bars. Five years after the opening of Kanagawa the import and export duties to be subject to revision, if the Japanese Government desires it. Class 2.—A duty of 5 per cent. to be paid on the following articles: all articles used for the purpose of building, rigging, repairing, or fitting out of ships; whaling gear of all kinds; salted provisions of all kinds; bread and breadstuffs; living animals of all kinds; coals; timber for building houses; rice; paddy; steam machinery; zinc; lead; tin; raw silk. Class 3.—A duty of 35 per cent. to be paid on all intoxicating liquors, whether prepared by distillation, fermentation, or in any other manner. Class 4.—All goods not included in any of the preceding classes to pay a duty of 20 per cent. The penalty for smuggling goods into any of the unopened harbours of Japan is fixed at 1,000 dols for each offence.

Advices from Jamaica are to the 25th ult. *Cordova's Mercantile Intelligencer* reports that sugar had advanced in consequence of encouraging accounts from America, and sales had ranged from 17s to 20s. There was no coffee at market. No pimento at market, and all accounts from the pimento districts state that the coming crop will be very short of an average. Trinidad advices announce that the weather, which had been very dry during the previous fortnight, had changed for the better, and good drenching showers had fallen. There remained very little produce for shipment, and none for sale; the last lot of molasses sold at 20 cents per gallon, casks included, for Baltimore. The returns of sugar, &c., shipped showed a considerable falling off from last year, but not so much as was expected. The quantities were—Sugar, 29,288 hhds, 4,156 tierces, 2,532 barrels; molasses, 5,677 puncheons, 105 tierces; rum, 730 puncheons; cocoa, 3,645,230 lbs; coffee, 360 lbs.

An account of the amount of bank notes authorised by law to be issued by the several banks of issue in Ireland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 28th day of July, 1860:—

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the Gazette.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 15th day of August, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,282,275	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,807,275
		Silver Bullion	...
	29,282,275		29,282,275

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	9,804,273
Rest	3,520,954	Other Securities	19,338,734
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	5 956 219	Notes	7,709,380
Other Deposits	12,792,434	Gold and Silver Coin	740,474
Seven Day and other Bills	770,254		
	37,592,861		37,592,861

Dated the 16th August, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,343,149	Securities	29,065,007
Public Deposits	5,956,219	Coin and Bullion	15,547,749
Private Deposits	12,792,434		
	41,091,802		44,612,756

The balance of Assets above Liabilities being 3,520,954*l*, as stated in the above account under the head Rest.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A decrease of Circulation of	£78,383
An increase of Public Deposits of	1,132,997
A decrease of Other Deposits of	1,210,846
No change in the amount of Government Securities.	
A decrease of Other Securities of	144,613
A decrease of Bullion of	3,795
An increase of Rest of	7,824
An increase of Reserve of	130,700

The present Bank returns offer very slight variations for comment. The great change seems to be the transfer of 1,132,997*l* from the private deposits to the public, which may possibly be accounted for by the paying over to the Government of that amount of the East India Railway Debentures. The decrease of the other securities of 144,613*l* accounts for the increase of the reserve of 130,700*l*.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 21,155,503	£ 20,126,115	£ 21 215,770	£ 22,521,833	£ 22,343,149
Public deposits	7,261,305	5,530 867	5,098,342	6,229,336	5,956,219
Other deposits	9,569,322	10 686,829	13,701,744	14,210,460	12,792,434
Government securities	14,430,847	10,593 654	10,879,168	11,209,668	9,804,273
Other securities	10,534 408	18,203 498	15,188,677	18 291,096	19,338,734

Coin and bullion	16,853,981	11 259,906	17,444,600	17,009,147	15,547,749
Bank rate of discount	2½ p. c.	5½ p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	96¼	91⅛	96⅛	95⅛	92⅞
Average price of wheat	43s 8d	59s 2d	45s 2d	43s 11d	59s 6d
Exchange on Paris (shrt)	25 30 35	25 20 25	25 10 15	25 7½ 12½	25 12½ 20
— Amsterdam ditto	12 0¼ 1	11 16 17	11 16½ 17	11 13½ 14	11 14½ 15
— Hamburg (3 months)	13 11	13 8¼ 8½	13 8 8¼	13 5½ 5¾	13 6 6¼

In 1850, money was generally becoming more in demand, in consequence of the expansion of trade consequent on the gold discoveries in California. The rate was 2½ to ¾. The total amount of gold from California received at the Mint of the United States was 20,964,310 dollars.

In 1857, little was spoken of but the mutiny in India; but the fall in the funds had been arrested by the vast number of investments on the part of the public. The Bank rate of discount was 5½ per cent., with a prospect of a rise. The enormous sum of 1,095,000*l* in silver was engaged for the next packet to the East.

In 1858, the other securities of the Bank were steadily running off, and the rate of discount in the general market was ½ per cent. below the Bank minimum, notwithstanding the impending payment of half a million on the Indian Debenture Loan. The war in China was on the point of terminating. The Atlantic Telegraph cable was still found capable of transmitting messages, but not with regularity.

In 1859, the money market was very easy, notwithstanding great activity in the manufacturing districts—a great drain of silver for India—an impending Russian 3 per Cent. Loan of 12,000,000*l*, and an Indian Loan of 5,000,000*l*. Large arrivals of gold from Australia were announced.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 965,086*l*; in 1857, a deficiency of 7,516,669*l*; in 1858, a deficiency of 1,486,933*l*; and in 1859, a deficiency of 4,050,636*l*. In 1860, the deficiency is 6,546,300*l*.

Money and Discount Market.—There has certainly been an increased demand for money during the week, and the Bank rate of 4 per cent. is fully maintained; indeed rather higher rates have been charged by the discount houses for short paper. Bills having more than three months to run are charged 5, and even 5½ per cent. discount; but whether from the serious aspect of politics, or from apprehensions of a deficient harvest, the greatest caution is exercised in taking paper at long dates. It is certain that large importations of corn will take place, and that the position of the Bank of England is not sufficiently strong to admit of a drain of gold from its coffers without raising the rate of discount. Looking, therefore, at the money market in all its aspects, the probability is that money will be dearer. Foreign loans are for the present out of the question; for even the 1,500,000*l* East India Railway 5 per Cent. Debentures are not fully subscribed for. Sir Charles Wood takes a credit for 3,000,000*l*, which he does not propose to raise by loan at present; because he reckons on the balances that will accrue from the calls on Indian Railways, and the issue of debentures to the extent of some seven millions. Still this money has to be found, and will constitute a drain on our resources, and a further absorption of capital.

A check to our trade would have a tendency to make capital more abundant; and, to a certain extent, we shall probably see a falling off in our exports to India and Australia. On the other hand, a good harvest in the United States invariably increases our exports to that country; but the first operation is to pay for the corn and cotton and therefore the probability is that money will be dearer for the next two or three months. There has been a very active demand to-day, both in Lombard street and at the Bank of England. The rate in the Stock Exchange on Government securities is 3 to 3½. Discount houses still allow 3 per cent on call, and 3½ at seven days' notice.

The following are the rates of discount at

	Bank Rate. Per cent.	Open Market. Per cent.
Amsterdam	3½	3
Berlin	4	4
Brussels	3	3
Frankfort	2	1⅞
Hamburg	No Bank rate	1½
London	4	4
Paris	3½	3
St Petersburg	5	5 to 5½
Vienna	5	4

English Funds.—There has been a very heavy market for English securities during the week. The cause of the depression has been the threatening aspect of affairs in Italy; also the fear that complications may arise in the East, and apprehensions for the harvest.

Consols at one period fell to 92⅝ for money, and 92¾ for the account; but to-day, in consequence of a large purchase of 200,000*l* Reduced by the Court of Chancery, and we may add by an improvement in the weather, the price has risen to 92⅞ 3 for money, and 93 to ⅛ for the September account.

The rate of money on Consols has been 3 to 3½ per cent. but we cannot give a greater proof of the limited nature of business in the Stock Exchange than to state that the mere fact of the Court of Chancery purchasing 200,000*l* Reduced, caused the jobbers to be borrowers of that stock for delivery; that is to say, although the rate of money in the Stock Exchange was 3 to 3½ per cent. on Consols, the jobbers, from the scarcity of Reduced, were glad to lend money on it for nothing in order to obtain it.

The price of Reduced is 93¼ ⅜, consequently it is only ¼ per cent. cheaper than Consols, instead of 1 per cent., which was the difference when we first drew attention to the subject. It is evident the public took advantage of this difference of price both for exchange and for investment.

The general aspect of the market for English securities is unsettled, and transactions are very limited, the public doing little either by way of investment or speculation.

FOREIGN FUNDS.—The market for foreign securities has been depressed during the week, and prices are lower. Turkish Bonds experienced a considerable depression, in consequence of a rumour that Turkey has applied to England for assistance in the shape of guaranteeing a loan. There is certainly no chance of Turkey obtaining any further advance from English capitalists unless under a guarantee; and, under the peculiar aspect of Turkish affairs, it is not expected that the English Government will guarantee a loan to Turkey, unless joined in such guarantee by the other Powers of Europe. Turkish Bonds were depressed to 59, but close at 60 this afternoon.

The Sardinian Loan of 6,000,000*l* was all subscribed for by Italian capitalists, which is a satisfactory indication of their having faith in the present order of things.

Spanish Certificates have been in demand, under the impression that Spain can never urge her recognition as a first-rate Power unless she recognises her just debts.

French funds have been very heavy during the week, but are slightly better to-day, the closing price being 68.10. It is remarked that France can scarcely contemplate a political disturbance, or she would not have reduced the interest on Bons de Tresor to 1 per cent.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

CONSOLS.

	Money. Lowest.	Highest.	Account. Lowest.	Highest	Exchequer Bills.

RAILWAYS.—The railway market has been depressed from mere sympathy with Consols.

The account on the 16th passed off very satisfactorally. There was a greater abundance of stock from realisation after the late rise, and the rate of money for continuation from account to account was from 5 to 6 per cent.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and this day:—

RAILWAYS.

BULLION.—We subjoin Messrs Pixley, Abell, and Langley's circular, which gives an account of the bullion transactions of the week, and also of those in India Government loan notes:—

Gold.—The demand for gold during the past week, although not quite so brisk, has been sufficiently active to cause the following arrivals to be taken for the Continent, viz.:—The City of Baltimore, from New York, with 15,000*l*; the Africa, from New York, with 84,000*l*; the Teutonia, from New York, with 34,000*l*; the Seine, from the West Indies, with 30,000*l*; the Athenian, from the West Coast of Africa, with 6 900*l*. The United States gold coin, ex the City of Baltimore and Africa, was sold at 76s 3d per oz, as we anticipated would be the case in our last circular of the 9th inst.; that by the Teutonia has been sold to-day at 76s 3¼d per oz, a slight rise in price having been obtained. The Gibraltar takes 50,000*l* for Cadiz, chiefly consisting of bar gold. The passages of the vessels now on the way from Australia range from 99 to 60 days, and about 443,000*l* is quite due.

Silver.—The Seine has brought a considerable amount in bar silver, and this has caused a slight reduction in the value, the quality suitable for the China market being sold at 61⅜d per oz standard. There is not much demand for the outgoing mail to India and China, and the quantity of bar silver sent will be comparatively limited. The Tagus has brought 3,290*l* from the Peninsula.

Mexican Dollars.—The dollars per Seine have been sold at 62⅜d per ounce, and a very large amount is likely to be sent to China. There have been a few arrivals from America, which have been taken at the same rate, and the demand may be considered as tolerably good.

Exchange on India is weaker. All the banks are willing to draw on Bombay and Calcutta at 1s 11⅛d, 60 days' sight. Bank of Bengal Post Bills, at sight, are 1s 11⅜d; bills with documents, 1s 11d to 1s 11⅛d.

India Government Loan Notes are very dull, and have felt the general depression of the last few days. We cannot quote 5½ per Cents. better than 102, and 5 per Cents. better than 96½ to 97. There is very little doing.

Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz std; bar gold, refinable, 78s per oz std; Spanish doubloons, 76s 3d to 76s 6d per oz, last price; South American doubloons, 74s to 74s 3d per oz, last price; United States gold coin, 76s 3¼d per oz, last price. Silver—Bar silver, 5s 1⅜d per oz std; bar silver, containing 5 grs of gold, 5s 1⅜d per oz std; fine cake silver, 5s 6d per oz; Mexican dollars, 5s 2⅜d per oz, last price; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11½d per oz, last price.

This afternoon, the Agincourt, from Melbourne, is telegraphed; she brings 174,500*l* in gold. The Bremen has arrived from New York with 110,000*l*, mostly for the Continent.

THE LATE FAILURES.—Messrs Charles Cornell and Son, bootmakers, of Rochester, liabilities 16,500*l*, propose to pay in full in eighteen months, through the expected receipt of remittances from corresponding houses in Australia, to which a ready assent was given. The liabilities of Messrs John Dickens and Co. were returned at 2,633*l*, and the assets at 1,906*l*, showing about 14s 6d in the pound. It was decided that the estate should be assigned over to two of the creditors for the general benefit. On the part of Mr John Craft, jun., provision merchant, of Knightsbridge and Oxford street, a composition of 8s in the pound was proposed, but, after some discussion, 9s was accepted, payable in three, six, and ten months, the last instalment secured. His liabilities are 9,973*l* 18s 4d, and his assets 4,923*l* 3s 2d.

At a meeting of the creditors of Messrs R. and J. Clarke, of Kidderminster, tanners and curriers, their liabilities amounted to 66,663*l* 11s 6d, and their assets to 13,474 13s 9d. A composition of 3s in the pound was offered, but the creditors will not be satisfied with any other arrangement than bankruptcy.

At a meeting of creditors of Mr Edward Harris Strange, of Ampthill, Bedfordshire, grocer, draper, and banker, a statement of accounts, showing liabilities of 15,000*l*, and assets of less than 5,000*l*, was shown, and it was resolved to wind up under an assignment. This was an old-established business, and was for years in the habit of taking money on deposit, allowing 4 per cent. interest; and a great deal of local injury will therefore accrue from this suspension.

There have been several meetings of an important character at the Court of Bankruptcy. Adjudication of bankruptcy was made against Messrs Smith, Patient, and Smith,

whose liabilities it is said amount to 200,000*l*, their assets being stated nt 37,000*l*. The examination meeting in the case of T. Ryder, a merchant in the East Indian trade, was adjourned for two months, no accounts having been filed. The bankrupt's liabilities are stated at 69,000*l*, against assets 59,000*l*. Assignees were chosen in the case of Messrs Bushell and Walker, straw hat manufactnrers, whose debts amount to 18,000*l*, their assets being stated at 5,000*l*. An examination meeting in the case of Heerjeebhoy Rustimjee, a Parsee merchant, of Singapore, who owes a considerable sum to his creditors and produces no assets, was adjourned for two months. The adjudication made against Messrs Hooper and Francis, leather factors, of Bermondsey, is to be disputed.

The suspension of Messrs Poole and Co., of Northampton, has been announced, with liabilities of 20,000*l*.

The suspension is announced of Mr Edmond Buvelot, leather factor, with liabilities amounting to about 40,000*l*, and assets roughly estimated at abont 18,000*l*. The accountants employed are Messrs Hutchinson and Bostock.

Miscellaneous.—Some statistics relating to the position of the local banks of the Australian Colonies, just received, are of special interest. It appears from these that since the second quarter of 1857, their paid-up capital has been continually increasing until the aggregate is 540,362*l*, equal to 10 per cent. augmentation, the total now being 5,708,000*l*; but at the same time the amount of business transacted has been greatly increased, the extension in New South Wales alone being 1,905,800*l*, or 44 per cent. The reserve of each in the March quarter of the present and past year is as follows:—

	1859. £		1860. £		To £100 Capital. £ £		Dividend per cent. per ann. £ £	
New South Wales	176,300	.....	210,300	.....	35	32	.....	20 20
Commercial.....	54,900	.....	46,200	.....	21	20	.....	20 15
Australasia	393,400	.....	373,800	.....	44	42	.....	20 20
Union	297,600	.....	299,700	.....	30	30	.....	20 16
Joint Stock.....	24,100	.....	46,000	.....	10	13	.....	10 10
London	39,900	.....	52,400	.....	6	7½	.....	6 7
English.....	6,900	.....	18,900	.....	1½	3¾	.....	4 5
Oriental	252,000	.....	252,000	.....	20	20	.....	10 10

The amount of profit disbursed in dividends for the year ended March last was 371,500*l*, against 364,300*l* in 1859, and 348,800*l* in 1858.

It appears in another phase of their position that, whilst their liabilities at the close of the March quarter were 730,600*l* more than in 1859, and 1,072,500*l* more than in 1858, the coin held was less, thus:—

Aggregate Amounts in March Quarter.

	1858. £		1859. £		1860. £
Notes and deposits.....	5,181,800	.....	5,734,800	.....	6,251,200

The Birmingham Town and District Banking Company has declared a dividend of 7½ per cent. for the half-year, payable the 1st of September. After writing off amply to cover bad debts, and paying all charges incidental to the working of the business, there remains a net profit of 15,102*l* 0s 10d on the year ending the 30th June last, to which sum must be added 2,965*l* 8s 5d remaining over from the division of profit in 1859, and in addition to which the sum of 12,415*l* realised for premiums on the new shares allotted to proprietors in January last. Adding these amounts together, they make the available total 30,482*l* 9s 3d. The guarantee fund is 60,000*l*.

The total amount of Savings Bank deposits in the United Kingdom is returned at 36,221,153*l*—namely, English depositors, 31,118,580*l*; Scotch ditto, 1,961,065*l*; Irish ditto, 1,818,619*l*; Welsh ditto, 907,383*l*; Channel Islands ditto, 415,506*l*.

The Bill to apply the sum of ten millions out of the Consolidated Fnnd to the service of the present year has been issued. It provides for the raising of the sum by means of Exchequer Bills, to bear an interest not exceeding the rate of 3½d per cent. per diem. The Bank of England is empowered to take, accept, and receive the same, and to advance or lend any sum not exceeding ten millions.

Messrs D. Bell, Son, and Co. report that during the past week the market for American State Stocks has continued to show great firmness. The demand for all descriptions continues, whilst the supply is very limited, prices in New York being generally higher than in London. The chief business in the Railroad Securities is still in the bonds and shares of the Illinois Central and New York and Erie Railroads, which have further advanced in price.

The Discount Bank of Paris has issued a statement of its operations for the year ended 30th June last, amounting to 732,000,000f, or 25,280,000*l*, being an increase of 28,000,000f, or 1,200,000*l*, over 1859. Its discounts have been 612,000,000f, or 24,480,000*l*. Its deposits have been within a fraction of 201,000,000f, or 8,040,000*l*, and its profits have been 1,846,824f, or 73,873*l*, of which 1,440,000f, or 57,600*l*, is applied to a dividend of 36f per share, being equal to 7 1-5 per cent. The reserve fund now amounts to 4,158,332f, or 166,333*l*.

The General Society of Credit of Industry and Commerce of Paris have made net profits of 677,260f. for the year, and a dividend of 5f, or 4 per cent., which will absorb 400,000f, is declared payable 1st Nov. next.

Mercantile advices from Chili report further important discoveries of copper in the desert of Atacama, which are attracting much attention from their abundance and richness.

At the annual meeting of the Royal Insurance Company, the report stated that the fire revenue attained in the year 1859 the large amount of 228,314*l*, being an increase of 32,196*l* over the preceding year, and an advance in three years of 50 per cent. The amount of profit realised on the general business was 64,488*l*, from which a dividend and bonus of 9s per share were declared. The main feature this year is the actuary's report on the position of the life branch, including his quinquennial valuation for bonus. The profit presented is 66,647*l*. This enables the Company to give a bonus of 2*l* per cent. per annum on the sums assured under participating policies. Last year 1,015 life policies were issued for the total sum of 434,470*l*, being the largest life business that the Company have had in any one year. The actuary's report, with the appendix, describes the statistical and monetary position of the Company's life branch from the commencement. It comprises two very interesting coloured diagrams, exhibiting the probable duration of life at various ages.

A prospectus has been issued for a National Freehold Cemetery Company (limited), with a capital of 125,000*l*, in 25,000 shares of 5*l* each.

The Commercial Times.

MAILS FOR NEWFOUNDLAND, CANADA, AND THE UNITED STATES, VIA GALWAY.—An alteration has been made in the dates for the despatch of the packets of the Atlantic Royal Mail Steam Navigation Company, between Galway and the United States, under their contract with Her Majesty's Government. The next packet will sail from Galway for New York on the 28th instant, instead of on the 21st instant, as previously announced; and the mails will, therefore, be made up in London on the evening of Monday the 27th instant, and, subsequently, on the evening of every alternate Monday. The alteration on the homeward voyage will commence with the packet leaving New York on the 25th September, which will be due at Galway on Friday the 5th October, and subsequent homeward packets will be due on every alternate Friday.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The show of English wheat at Mark lane to-day was very limited; nevertheless, owing to the fineness of the weather, and the large imports of foreign grain and flour, the demand was inactive, but at prices fully equal to Monday. All kinds of spring corn were in good request, at extreme rates. Flour was firm in price. The imports amount to 27,040 quarters of wheat; 3,350 barley; 39,030 oats; 5,880 sacks and 12,390 barrels of flour.

At Liverpool, this morning, wheat advanced 3d per cental, and flour 1s per sack and barrel. Other produce commanded extreme rates. Advices from New York to the 4th inst., state flour, owing to a continuous demand for export, had advanced 5 to 10 cents per barrel, and that wheat was steady in price. Such were the large purchases for England that freight room had become very scarce. A communication, forwarded by Messrs Briggs and Co., of Alexandria, and dated the 4th inst., states that produce generally was in steady export request. Wheat was selling at from 32s to 35s per quarter.

The Liverpool cotton market has been animated during the week, under the influence of the last accounts received from America respecting the new crop. The total sales have reached 90,000 bales, including 55,000 bales to the trade, 16,000 on speculation, and 19,000 bales for export. Quotations are fully ⅛d per lb above those of last Friday. The market closes to-day steady, with sales of 8,000 to 10,000 bales. It becomes advisable, however, to receive these American accounts with much caution, for it can be easily understood that planters and American operators will endeavour to procure a good price for their cotton at the opening of the season; but whether these drought accounts will turn out so serious as reported remains still to be seen; they may very probably have been exaggerated. A large business has been transacted in the London market, at about ⅛d per lb advance on the week. Sales, 3,900 bales.

The cotton market at New York on the 4th inst. was very quiet. Picking of the new crop had fairly commenced.

The public sales of tea held this week have gone off slowly, at, in some instances, drooping currencies. The private market is very inactive, at about previous rates.

The following commercial news is dated Hong Kong, June 23:—

TEA.—Settlements have been made to a moderate extent at high rates, considering the make and the quality of the Tayshan congou. Prices of scented kinds show a slight decline on opening rates. A few chops of Oopack and Oonshon are expected to arrive about the end of the month. The crop is said to be a small one. Settlements are as follows:—1 chop of country congou at 33 taels; Tayshan congou, old, 2,000 half chests, 19 to 21½ taels; ditto, new, 7,000 half-chests, 24 to 27½ taels; scented orange pekoe, 15,000 boxes at for finest 37 to 39 taels; for fine, 32 to 35 taels; good middling, 28 to 31 taels; common, 24 to 26 taels; scented caper, 20,000 boxes, fine to finest, 28 to 32 taels; good medium, 24 to 27 taels; common, 20 to 22 taels; Canton gunpowder, 3,000 boxes, at

for old season's tea, 14 to 18 taels; for new, fair quality, 22 to 23 taels. Pouchong, 1,800 half-chests common Canton-packed for United States at 14½ to 21 taels. Amoy.—Advices are to the 17th inst. In imports little or nothing doing. Tea—About 21,000 packages have arrived, including 9,000 packages contract tea. Prices asked were:—Orange pekoe, 17 dols; congous, 18 dols to 20 dols; oolong, 25 dols to 28 dols. The oolongs are rough in make, but fuller and better flavoured than last year. Congous fair quality. Orange pekoes generally inferior. Foochow.—Advices are to the 15th inst. Tea.—A considerable business has been done during the fortnight, and though prices have somewhat fluctuated the average is below the opening rates. Supplies have come down freely, and prove the present season's crop to be of about average quality. Three vessels have sailed, and it is probable several others will leave before the end of the month. The sales since the opening of the market on the 30th ult. comprise:—Congou, 45,750 chests, at from 17.5 taels short for good common, to 33.5 taels for finest Kaisow. Souchong, about 2,000 chests, at from 30.5 taels for fair quality, to 41 taels for finest; they are inferior to last year's. Oolongs, 1,800 half-chests, at 23 to 25 taels for good, all for England. Pekoe, 380 chests, at 45 to 46.5 taels. Scented teas, 900 huxes, at 31 to 35 taels for finest; very limited supply. Stocks on the 15th inst.—Congou, 16,000 chests, comprising chiefly medium flavory and Kaisow kinds. Souchoog, 4,000 chests, fine. Oolong, 7,000 half-chests, fine and good cargo. Pekoe, 500 chests, medium. Quotations from market sales:—Congou, very low ordinary to common, 11 to 17 taels; good common to flavory, 17.5 to 24 taels; Kaisow kinds to Kaisow, 24 to 30.5 taels. Souchong, fair medium to finest, 30 to 41 taels. Oolong, fair to good, 23 to 26 taels. Shanghai.—Advices are to the 14th inst. Silk—During the fortnight only a few hundred bales have been settled, making the total settlements for the season 66,300 bales. The new crop continued to be well reported on, but in consequence of the fall of Soochow, and complete interruption to all communication with the interior, none of it had arrived, and it was doubtful when supplies would reach. The total export of silk from China to Europe is 68,969 bales, against 79,903 bales last year, or a decrease this season of 10,933 bales. Tea—Only a few very trifling settlements have been made. Stock of black estimated at 5,000 chests, and of green 3,000 packages. Of the new crop no supplies have yet come forward, and, owing to the disturbed state of the country, arrivals must be very late. It is not at all impossible that there will be no export this season should the present state of affairs continue. The total export of tea from China to Great Britain is 81,162,600 lbs, against to same time last year 60,732,900 lbs, or an increase for this season of 20,429,700 lbs. To the United States the export is 30,842,000 lbs against, 29,530,200 lbs, or an increase for this season of 1,311,800 lbs.

The demand for most descriptions of raw sugar has fallen off; nevertheless, very little change has taken place in the quotations. Refined goods have met a dull sale, on rather lower terms, with a somewhat increased supply on offer.

Plantation coffee has given way fully 1s per cwt. Most other kinds have realised former rates; but the inquiry for them has been somewhat restricted.

Messrs Volkart and Co., of Ceylon, report the coffee trade to the 13th ult., as follows:—

Exporters have taken advantage of the continued fine weather to push forward shipments of coffee, which, to date, stand as under:—

	Plantation. cwts.	Native. cwts.	Total. cwts.

— 1859	317,987	174,672	522,659

Late advices from the interior tend to confirm the belief that the recent drought has seriously injured the growing crop of native coffee. It would appear also to have affected the Ouvah coffee, which comes in slowly, and in small quantities. This circumstance has caused an advance in value. In plantation coffee there are no transactions to report, the Badulla gathering being nearly all away, and the season, as yet, too early to induce purchases of growing crops. The weather has been very favourable for plantations since we last wrote, and planters express confidence in being able to turn out fair average crops on the generality of estates. Plantation coffee, low, 10s 3d to 10s 6d; ditto, mountain, 11s per bhl. Native coffee, unpicked, 42s 6d to 43s 6d; ditto, picked and dried, 45s 6d to 46s 6d per cwt.

A very large business has been passing in rice, at an improvement in value of 3d per cwt.

Messrs Moran and Co., of Calcutta, have forwarded the annexed indigo report, under date the 4th ult.:—

Our reports regarding the progress of the new crop are as follows:—Dacca, Furreedpore, and Mymensingh have been working satisfactorily, and have every prospect of closing with better out-turns than they have had for some years past. Jessore has a fine crop of plant and several factories are at work, and more would be, if the rivers had risen a little more so that water could be obtained for steeping. With moderately good luck the district must do very well this year. The result of the season in Kishnaghur is more problematical. The minds of the ryots are so unsettled, and they appear so convinced that it is the wish of Government that they should cease to grow indigo, that there is no dealing with them. Burdwan, Pubna, Bauleah, and Rajshaye are all expected to do well. Moorshedabad and Malda are dependent upon favourable weather and a late inundation to enable them to make more than a saving season. Bhagulpore and Purneah are not expected to make more than about three-fourths of last year's quantity. Tirhoot has at last had some good heavy showers throughout the district, and the plant is said to be growing fast, and notwithstanding the extraordinary drought and scorching wind with which it had to contend, and which thinned it a good deal and in weak lands destroyed some of it, there is yet sufficient left to enable planters with moderate weather to make a fair season. From the Benares Zillaha there are constant complaints of want of rain. The irrigated sowings and the Khoontias are both suffering greatly, and in the absence of rain the new sowings cannot be commenced upon. We therefore think the prospects of these districts far from satisfactory. From the Doab we have much the same kind of report. Exports of indigo from the 1st November, 1859, to the evening of the 2nd current:—To Great Britain, 18,877 chests; to Havre and Bordeaux, 5,139; to foreign Europe, 64; to America, 1,460; to Gulf, &c., 1,745; to sundry ports, 11; total 27,296.

There has been a steady, though not to say active, inquiry for saltpetre at the late improvement in value. Rum, brandy, and grain spirits have ruled about stationary; but we have to report a decline of ¼d per lb in the value of copper. The leading value of Scotch pig iron is 51s 6d cash.

The oil market generally has been somewhat active, and prices have had an upward tendency. Linseed oil is worth 30*l*. Turpentine has ruled heavy, and lower in price.

Tallow, owing chiefly to the large shipments from St Petersburg, has moved off slowly. To-day, P. Y. C. on the spot has sold at 51s 6d; for September, 51s 3d; October to December, 51s 3d; December, 51s 6d; and January to March, 51s 6d per cwt. Town tallow is 52s 3d net cash.

"We are unable to notice any particular variation in money matters," observes the New York *Shipping List* of the 1st inst., "unless it be a slight drift towards firmer rates, with an increasing inclination to give the preference to paper of the shortest dates. It seems to be conceded, by borrowers and lenders alike, that towards the close of the month a stiffer market is inevitable, under the stimulating influences of the autumn trade, and a brisk demand for means to move the Western crops to the seaboard. The continued activity at the Stock Exchange occasions considerable briskness in temporary loans, which are easily effected, however, at the usual quotations. We quote:—

	Per cent. per annum.
Loans on call, stock securities	5 to 6
Do. other good securities	6 7
Prime endorsed bills, 60 to 90 days	5 6
Do. 4 to 6 months	6 6½
First class single signatures	6½ 7½
Other good bills	7½ 8½
Names less known	9 10

"A fair demand exists for most articles of domestic manufacture, and the aggregate business for the week is to a fair extent. The Southern buyers have begun to make their purchases, and the market begins to present quite an animated appearance, when compared to the quiet which reigned in the interregnum between the spring and fall trade. Foreign goods are in moderate request, and prices continue somewhat irregular. Transactions have thus far been comparatively light."

The improved demand which prevailed at the date of our last writing extended into Saturday, when transactions were to a fair extent, at full prices. The present week opened upon a quiet market, however, and the sales have been light, though at previously quoted rates. The sales for the three days are 3,000 bales. We quote:—

NEW YORK CLASSIFICATION.

	Upland.	Florida.	Mobile.	New Orleans and Texas.
	c	c	c	c
Ordinary	6¼	6¼	6¼	7
Good ordinary	8	8¼	8¼	8½
Middling	10½	10¾	10¾	11
Good middling	12¼	12½	12½	12¾
Middling fair	12¾	12¾	12⅞	13⅛

The arrivals have been from Mobile, 449 bales; Georgia, 130; South Carolina, 430; Baltimore, '28—total, 1,037 bales. Total Total import from 1st to 31st July, 24,818 bales. Total import since 1st September, 448,929 bales. Export from 1st to 31st July, 9,086 bales, against 20,528 in 1859.

NEW COTTON.—The first bale of new cotton was received here yesterday. It was raised in Lee County, Georgia, and forwarded to this city. Class, good middling. The first bale last year was received on the 20th August.—*Savannah Republican*, July 26th.——RED RIVER COTTON.—The steamer Moro, from Alexandria, which arrived on the 22nd July, brought down two bales of cotton of the new crop—the first received from Louisiana this season. The cotton was shipped from Alexandria. This is, we believe, the earliest arrival of new cotton from this State in market for many years. The cotton is of fine colour and staple.——GEORGIA COTTON.—In 1858, the first bale was received at Macon, August 7th; in 1859, August 19th; and in this present year, July 21st—much earlier than any previous record.

LIVERPOOL MARKET.—AUGUST 17.

There has been an animated demand for cotton almost throughout the past week. Considerable purchases have been made by speculators and for export, and the trade have taken rather more than their usual supply. The import has been light, and a material reduction in the stock has taken place. Prices of the middling and lower qualities of American have risen ⅛d to ¼d per lb. It is not easy to obtain any advance in the better, except for good stapled parcels. Egyptian do not yet show much improvement. Brazil are also stationary. East India are more saleable, at full rates. The sales to-day may reach 10,000 bales. There is less activity in the market than in the early part of the week. The reported export amounts to 19,210 bales, consisting of 10,950 American, 1,950 Brazil, and 6,310 East India.

IMPORTS OF FOREIGN AND COLONIAL WOOL.

COLONIAL and FOREIGN WOOL imported into London, Liverpool, and Hull, from Jan. 1 to July 31, 1859 and 1860, and the total imports, including Bristol, Leith, Grimsby, and Hartlepool.

MARKETS IN THE MANUFACTURING DISTRICTS.

The late downward movement in prices in the manufacturing districts has, at length, been checked. During the week, rather more business has been passing in cotton and other goods for shipment to India. The French and German houses have purchased more freely, and no accumulation of stock has taken place. The wool trade still continues very buoyant, and the manufacturers complain of the high rates at which English qualities are held. In the iron districts, trade appears to have become more active, at full quotations. Coals have, consequently, continued firm.

MANCHESTER, Aug. 16.—The upward movement in cotton has not attracted any buoyancy to this market; at best it has only arrested further decline in our leading staples, and caused a fair sum of transactions at what may be considered safe rates as compared with those ruling two to three months ago. On the whole, business has this week somewhat exceeded that for any week lately. Prices have become more steady and regular, at the same time that sellers have met the increase of demand freely. With partial exceptions, few stocks have been held of late, and these few have now been rather reduced. But confidence has not been sufficiently manifested to induce purchasing for forward delivery.

LEEDS.—There was but a thin attendance, many of the larger manufacturers being absent at the London wool sales, and from the unsettled state of the weather and the consequent fears for the result of the harvest, the merchants have purchased with great caution, and less than an average quantity of goods has changed hands.

HALIFAX.—The worsted trade has been rather dull; indeed, for the past few weeks both orders and sales of yarns and goods have been comparatively slack. Spinners are still moderately well engaged in working up late orders, but they complain that new ones do not come to hand.

HUDDERSFIELD.—We have had a large attendance of buyers at our market, and the tone of the trade generally has consequently improved a little since last week. Prices are still well supported.

BRADFORD.—Wool—There is no animation in the trade, and prices may be quoted as steady, at the recent concession. Yarns—The spinners are generally well employed for export on orders given out some time back. The demand for home consumption is rather lessening. In prices there is as yet no giving way. Pieces—Merchants are very shy at buying anything they do not actually want. The trade for the season has yet to begin.

ROCHDALE.—The long-continued rain and the absence of summer, while it has depressed the demand for clothing goods, has had a directly contrary effect on the flannel trade, which continues brisk. The attendance has been large, but only moderate of producers; most of the Manchester houses were represented, and were rather eager to find goods in stock. The Yorkshire goods trade is rather flatter, and manufacturers thereof report that night work has been discontinued at their mills.

LEICESTER.—The hosiery trade generally is in a healthy condition. There is not much doing for the home department, but some shipping orders are in hand, and these, with some contracts for the army, have kept the workpeople pretty well employed. In the country districts business continues steady. The wool market is firm, and high prices are asked for good qualities. Yarns are in fair demand, and spinners continue tolerably employed.

NOTTINGHAM.—The lace trade continues without change. There has been no improvement during the past few days in any branch, and trade generally is in a depressed state. The present time of year is usually marked as the commencement of a busy season; this year, however, there are no signs of animation. Plain goods are not in any better request. There is fully as much doing in fancies as for some time past. In the silk department business remains dull, and only a few descriptions are in request. A good deal of machinery is still standing, and many lace-makers are only partially employed, as manufacturers appear not to finish except to order. In hosiery there is no improvement to notice. All departments are quiet, and numbers of the operatives are out of work, some of them applying for relief at the union. Material is without change.

DUNDEE.—Flax continues firm, and a fair amount of business has been going on at steady prices. Transactions have taken place in Riga WPW at 49*l*, PLD 43*l*, Memel Wilna No. 1 42*l*, NB 35*l*. Tows have been in active request. Jute has been more inquired for, and a fair amount of business has been doing in the article at about former rates. The demand for the finer descriptions of linens continues good. Heavy goods are still very dull.

WOLVERHAMPTON.—In pig iron the market continues flat, with a very moderate business doing. The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latten, 12*l*; boiler plates, 9*l*; best and best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. Welsh bars, 5*l* 10s to 5*l* 12s; rails, 5*l* 5s.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Aug. 1.—FLOUR AND MEAL.—The demand for Western flour was moderate on Saturday and Monday, and holders of the lower grades, being anxious to sell, were constrained to grant a concession amounting to 5c to 10c per barrel, in order to effect sales. State flour was in fair request, however, and the lower grades appreciated somewhat, transactions having been effected at 5.05 dols to 5.10 dols for superfine brands, and 5.15 dols to 5.30 dols for extra. On the receipt of the more favourable European advices, the market for both State and Western became more active, and all grades were more freely dealt in, both for shipment and home consumption, while holders manifested less disposition to press sales. Transactions for the three days comprise 42,500 brls, leaving off with considerable buoyancy. Canada flour remains steady, without noticeable alteration in values; the sales are 1,650 brls, including 560 yesterday. Southern flour has likewise been in tolerably active request, and transactions present a fair aggregate. Prices have ruled somewhat lower, however.

EXPORT, from 1st to 31st July.

	1860 barrels	1859 barrels
Wheat Flour	222,748	74,942

GRAIN.—The market for wheat was without striking change on Saturday and Monday, when the demand was moderate at about the closing quotations of Friday last. A more active inquiry prevailed yesterday, however, and transactions were to a fair extent, both for consumption and shipment. The sales since Friday comprise 114,500 bushels, including 34,000 Milwaukee Club at 1.20 to 1.21 dol; 77,800 winter red Western, 1.19 to 1.25 dol; 9,100 white Western, 1.33 to 1.35 dol; 700 new white Ohio, 1.33 dol; 1,000 white Kentucky, on private terms; 2,200 new red Delaware, 1.30 dol; 6,000 white Indiana, 1.36; 5,200 Racine, 1.20; and 300 new white North Carolina, 1.35 dol. The corn market has presented a corresponding degree of activity, and full prices have been realised. The sales are 197,000 bushels, including 97,000 yesterday, closing firmly at prices showing an advance of one cent per bushels, as follows:—Southern yellow, 64 to 66 cents; ditto, mixed, 62 to 63; round yellow, 64 to 66; Western mixed, 62; and unsound, 61 to 61½.

EXPORT, from 1st to 31st July.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Both here and throughout the provincial districts, very little English wheat has been on offer this week. Owing to the unusually backward state of the crops, and the limited quantities of wheat cut even in our most forward counties, the demand has ruled steady, and, in some instances, selected samples have produced rather more money. For foreign wheat—the imports of which have continued on a liberal scale—the inquiry has been somewhat active, and the currencies have been freely supported in every instance. The whole of the arrivals of foreign barley continue to be taken off readily, at a slight improvement in value. Malt, however, has met a slow inquiry, on former terms. There has been an active inquiry for oats, and good sweet corn has produced 6d per quarter more money. Beans, peas, and flour have moved off freely, at very full prices.

The continental markets still continue firm for wheat, but no change of importance has taken place in prices. For the most part, the supplies on offer are seasonably good. All spring corn commands extreme rates, with an active inquiry on English account. In the United States, all kinds of produce—but more especially wheat and flour—continue to sell briskly for export to England; nevertheless, extensive purchases have had very little influence upon value—a proof that very abundant supplies are still on hand in the interior of the country. Reports in reference to the harvest, both in the States and in Canada, are very favourable. It seems, therefore, probable that heavy exports will continue to be made to Great Britain for some time.

The Scotch markets have been very firm for wheat, at quite last week's quotations. Barley and oats have, in some instances, produced rather more money. In the value of other articles, no change has taken place; but we understand that very little wheat now remains in stack.

Throughout Ireland, there has been a steady, though not to say brisk, demand for most descriptions of produce. The fluctuations in prices, however, have been trifling.

The few samples of English wheat on sale here to-day were taken off steadily at Monday's currency. Foreign wheat was less active, but not cheaper. All spring corn, as well as flour, realised extreme rates.

Mr E. Rainford furnishes the annexed particulars in reference to the floating trade:—The arrivals off coast for orders since the 9th inst. have been 22, viz.:—Wheat, 1 cargo from Odessa, 1 Trieste, 1 Taganrog, 1 New York, 1 Marianople, and 1 Berdianski; rye, 1 Galatz; maize, 3 Ibraila, 1 Oltenitza, 2 Sulina, 1 Odessa, 1 Galatz; barley, 2 Sulina, 1 Constantinople, 1 Theodosia; oats, 1 Trieste; beans, 1 Larache and 1 Alexandria; altogether 6 wheat, 1 rye, 8 maize, 4 barley, 1 oats, and 2 beans. Of these 4 or 5 were disposed of previously. A few wheats continue in good demand. Arrived maize was in less request for a day or two during the week, but there is a rise to-day of 6d per quarter, indicating improved prices. The following prices have been paid since the 10th:—Wheat, arrived, Odessa Ghirka at 53s and 54s, and Taganrog Ghirka at 52s 9d per 492 lbs; Galatz at 50s 9d per imperial quarter, B. L. quantity. On passage, Marianople at 55s; hard Berdianski, at 50s 9d and 51s; Taganrog Ghirka (6 cargoes), at 53s 6d. Now shipping, hard Taganrog, at 51s. Shipping or shipped, hard Taganrog, at 50s 9d. To be shipped in August or September, Taganrog Ghirka, at 53s 6d per 492 lbs. Maize, arrived, Ibraila, 2 cargoes (1 not perfect), at 32s; 1 cargo, heated

and discoloured, at 31s 1½d; and 1 (over 2,000 quarters), reported perfect, at 32s 6d per 480 lbs. To be shipped up to October, Ibraila, at 33s per 480 lbs, c.f.i. Barley, arrived, Wallachian, 25s 6d; and Danubian, 25s 6d per 400 lbs, both imperfect condition. Beans, arrived, Egyptian, at 32s 9d. On passage for London direct, Behara, at 32s per imperial quarter.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—The market has been rather dull this week, and the transactions on the spot have been small at about previous rates. The operations afloat have been extensive, but on terms in favour of the buyer. Consumption keeps good; the deliveries last week at this port amounted to 5,615 tons, against 4,463 tons in the corresponding week of 1859. The stock now shows an increase of only 2,714 tons on last year's, being 70,858 against 68,544 tons.

West India.—The sale to yesterday was 1,860 casks, inclusive of 540 casks by auction: Barbadoes at 37s to 43s; and St Vincents and Jamaica at 37s to 41s per cwt.

Mauritius.—At public sale, 4,200 bags principally found buyers at 36s to 39s for good to fine brown, and at 40s to 44s for semi-grainy yellow.

Bengal.—2,300 bags have been brought forward and mostly sold: good and fine grainy at 45s to 46s 6d; some 16d duty at 48s; and good and fine Gurpatta date at 43s 6d to 44s per cwt.

Foreign.—At public sale, 245 hhds 191 brls Porto Rico were partly disposed of at 38s to 44s; and 600 casks 256 brls Cuba muscovado at 39s to 41s per cwt. Privately, 8 to 10,000 bags clayed Manilla have changed hands at 37s; also 5,300 bags unclayed at 34s; and 400 hhds Nickerie Surinam at 39s 6d per cwt. Afloat, 10 cargoes Havana have been sold, mostly for the United Kingdom, at 27s to 29s for numbers 10 to 16; a mixed cargo of white and floretes at 31s, a cargo No. 11½ at 27s, and one No. 14 at 29s, for continental ports; also a cargo of Porto Rico at 27s 3d, landing weights, for United Kingdom.

Refined.—Flat and lower; brown lumps selling at 50s per cwt.

MOLASSES.—Some business has been done in Cuba muscovado at 17s 6d per cwt.

RUM.—Rather dearer, a Government contract for 100,000 gallons being advertised. 6 to 700 puns West India have changed hands at 1s 6½d to 1s 7½d for Leewards, and 1s 8d to 1s 9½d for Berbice and Demerara.

COFFEE.—Demand without activity, and prices of plantation Ceylon are 6d to 1s lower. At auction, 710 casks 100 bags, &c., realised 69s to 76s 6d for low middling to good. In native, 50 casks 500 bags are reported privately at 61s to 61s 6d per cwt. Nothing done in other kinds.

COCOA.—310 bags Trinidad and 230 bags Grenada have been brought forward. Of the former, only a few lots sold at 70s to 82s; the latter was chiefly disposed of at 62s 6d to 65s per cwt.

TEA.—Little done privately this week. Public sales were begun yesterday, comprising 28,729 packages. Assam sold well, and the China went off better than expected, previous rates being supported.

RICE has continued to meet an active inquiry, and in the course of the week nearly 80,000 bags have changed hands: white Bengal, at 11s 3d to 13s 1½d; Madras, 10s 6d to 11s 3d; and Rangoon and Arracan at 9s 6d to 11s per cwt. The latter descriptions have risen 3d to 6d, and Bengal is also rather dearer.

SPICES.—The market has been quiet, and we have very little business to report. Some sales have occurred in pimento at 3½d to 3¾d; and in Sumatra pepper at 4½d cash. Of Jamaica ginger, 317 barrels in auction went 4s to 5s cheaper: ordinary to fair, 82s to 99s per cwt. Cassia lignea is rather cheaper again; 630 cases selling at 80s to 86s for coarse to good seconds.

SALTPETRE firm; the sales amount to about 2,000 bags: refraction 12¾ to 11½, at 40s 3d to 40s 6d; 7¾ to 6, at 43s to 44s; and 5½ per cent. and under, at 44s to 44s 6d per cwt.

METALS.—Spelter has continued in active request, and rather large sales have been effected, part at 20*l* 17s 6d per ton, now 21*l* asked. Scotch pig iron has fallen to 51s 3d to 51s 6d, cash, for mixed numbers. Copper is ½d cheaper; sheet, 11d per lb. Straits tin in fair request at 132s; Banca flat, and obtainable at 136s per cwt. Lead unaltered.

COCHINEAL.—The demand has been steady, but at rather easier prices. 300 bags in public sale chiefly found buyers: Honduras silver, 3s to 3s 9d; black, low to middling, 3s 3d to 3s 11d: Mexican silver, 3s to 3s 2d; and black, 3s 6d per lb.

DYESTUFFS.—Cutch dull of sale, at 27s. Gambier in steady request at 18s per cwt. Safflower meets very little inquiry.

DRUGS.—There is no new feature to notice in any article except cassia oil, which is lower, having sold at 11s 3d to 11s 9d per lb.

INDIA RUBBER.—Market continues flat at 2s 1½d to 2s 2d per lb for East India lump.

SEEDS.—Firm market at higher prices: Calcutta linseed, 51s 6d to 52s 6d; and Bombay, 54s per qr. Rape is scarce at 69s to 70s for Gozerat, and 59s to 61s for other sorts.

OILS.—Sperm is again rather dearer, being quoted at 100*l* to 101*l*. Common fish oils are dull, and prices lower: pale southern, 34*l*; pale seal, 35*l*; and cod, 37*l* per tun. Olive is held more firmly: Gallipoli, 60*l*; and Mogadore, 53*l* per tun. Linseed oil has risen to 30s, and rape to 46s 6d for foreign refined. Cocoa-nut and palm oils are firm at previous rates.

TURPENTINE.—Rough has sold at 8s 6d to 8s 9d. Spirits have fallen to 30s for American, and 29s 6d English.

HEMP, &c.—No transactions reported in Manilla. Of jute, 3,900 bales in public sale about one-third sold at 13*l* 15s, up to 21*l* 10s per ton.

TALLOW.—The demand is without improvement, and the market still continues on the decline. Petersburg in all positions, 51s 3d to 51s 6d per cwt.

PARTICULARS OF TALLOW.—Monday, August 13.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market closes with rather a dull tone. In West India muscovades the business is confined to 730 casks, mostly at steady prices, giving a total of 2,600 casks for the week; but the public sales of other descriptions have gone off without particular animation, the grainy sorts at rather easier rates, and the Gurpatta date decidedly cheaper, viz., 4,238 bags Bengal, nearly all disposed of, good and fine yellow Cosepore, 43s 6d to 44s 6d; Bally, 44s 6d to 46s; good and fine yellow Gurpatta date, 42s 6d to 43s 6d; a few low yellow date sort, 37s 6d to 39s. 1,823 bags Mauritius were chiefly bought in from 39s 6d to 43s.

COPPER.—The only public sales to-day consisted of 3,756 bags Costa Rica, which were nearly all taken off at fully previous rates; good ordinary mixed to fine ordinary 63s 6d to 68s; even coloury, 70s.

RICE.—The market has had a quieter tone to-day, and business has been comparatively unimportant.

SPICES.—The public sales to-day comprised the following:—348 bags Penang white pepper, of common quality, which found only partial buyers at 6d; 523 cases cassia lignea were realised on previous terms, low middling to good middling 83s to 85s, ordinary 80s to 81s, mouldy 73s to 74s.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has shown a further weakness this week. Grocery lumps have been sold at 50s 6d. Treacle continues very firm. A sale of 120 tons of V. O., crushed, it is reported, has been made at 31s 9d in hhds, and 32s 2d in barrels, f.o.b. in Holland, for delivery this month.

GREEN FRUIT.—The sale of West India pine apples continues brisk. 20,000, sold by Keeling and Hunt at public sale, went at an advance from 2d to 3d per pine; further shipment being stopped by wet weather at the Bahamas. Lemons continue depressed. More inquiry for nuts, and some operations have been effected to Barcelona, the demand for which has been larger than usual at this period of the year.

DRY FRUIT.—Currants continue firm, and in some instances show a further advance. No telegrams of importance have been received during the week from the places of growth, and no prices are yet named for the new crop. Raisins continue quite neglected. At public sale a few damaged currants sold at full prices, and red raisins were bought in at 24s.

ENGLISH WOOL.—The same dull feeling exists in the English wool trade, and to effect sales lower prices must be submitted to.

COLONIAL AND FOREIGN WOOL.—The sales are going off with a little more spirit; prices quite firm.

FLAX.—Market firm.

HEMP.—Market steady; but few transactions this week.

COTTON.—Sales of cotton wool from Friday, August 10, to Thursday, 16, inclusive:—3,400 bales Surat at 3¼d to 3 5-16d for fair Compta, and 3⅞d and 4d to 4⅛d for fair and fully fair to good Dholleras, and 4d for fully fair Oomrawuttee; 500 bales Madras at 4⅜d to 5d for fully fair to good fair Tinnivelly, and 3⅝d to 3¾d for fair to fully fair Western. An active demand for Surat has again been experienced throughout the

week, and rather higher prices have been obtained, and in some cases ⅛d per lb advance. Western Madras has also found ready buyers at fully last week's quotations. Tinnivelly continues in limited demand, but there is no change to notice in prices. Yesterday, 1,600 bales Tinnivelly, a great proportion sea damaged, and 138 West India, were offered at public sale. Of the Tinnivelly, about 1,000 bales, including damaged, were sold at 3¾d to 4⅜d for sound ordinary to middling fair; the West India were all sold at 7¼d to 8d for middling to good Carriacou and St Kitt's. P.S.—Market very firm. Sales to-day, 300 Tinnivelly at 4¾d to 5d for fully fair to good fair.

SILK.—Since the receipt of the last news from China, the silk market has been active, and prices extremely firm.

TOBACCO.—A fair demand has existed for good and fine descriptions for home trade, at more regular prices. An improved business has been done for exportation.

LEATHER AND HIDES.—Since the publication of our circular of last week, the leather trade has continued much in the same position: the demand has been to about an average extent, and prices unaltered. At Leadenhall on Tuesday there was a good supply, with a moderate inquiry, but no extensive business was done.

METALS.—No change can be reported in the amount of business going on. Copper was reduced in price on 14th inst. ½d per lb on manufactured, and 4*l* 10s per ton on unmanufactured, and even at the present unusually low price there is only a small business doing. Iron continues steady for all descriptions, excepting Scotch pig, which is drooping in price. Tin keeps firm in price and in fair demand. Spelter has had a good deal of attention, but is again falling flat. Lead remains moderately in request. Tin plates unchanged.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	54	3
Fat by ditto	2	9
Yellow Russian	53	0
Melted stuff	38	6
Rough ditto	22	6
Greaves	20	0
Good dregs	7	0

Imports this week 1,540 casks.

PROVISIONS.

Bacon still very quiet, owing to the high price. Friesland in better demand.

METROPOLITAN CATTLE MARKET.

MONDAY, Aug. 13.—The total imports of foreign stock into London last week amounted to 15,057 head. In the corresponding week in 1859 we received 10,622; in 1858, 9,518; in 1857, 8,922; in 1856, 5,028; in 1855, 8,867; and in 1854, 9,703 head.

From our own grazing districts the receipts of beasts fresh up this morning were very moderate, and we observed a great deficiency in their general weight. For prime Scots, &c., the demand ruled steady, at an advance in the quotations realised on Monday last of 2d per 8 lbs. Most other kinds sold somewhat slowly, but at full prices. The supply of sheep being on the decrease, compared with Monday last, the mutton trade was somewhat active, and, in most instances, prices advanced 2d per 8 lbs. There was a slightly improved sale for lambs, the value of which had an upward tendency. About 500 reached us from Ireland. Calves, the supply of which was moderate, changed hands steadily, at full quotations.

SUPPLIES.	Aug 16, 1858.	Aug. 15, 1859.	Aug. 13, 1860.
Beasts	5434	4750	4420
Sheep and Lambs	28900	29260	24250
Calves	277	350	257
Pigs	450	200	300

THURSDAY, Aug. 16.—Although only a moderate supply of beasts was on offer in to-day's market, the demand for all kinds ruled heavy, and, in some instances, prices were 2d per 8 lbs lower than on Monday, the top quotation being 5s 4d per 8 lbs. The show of sheep was seasonably good. Prime Downs and half-breds were steady in value, but long-woolled sheep were a shade lower. We have to report a very inactive inquiry for lambs, at barely previous rates. Calves moved off heavily, at a decline in value of from 2d to 4d per 8 lbs. Pigs and milch cows were dull, but not cheaper.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	2	3	6	Prime Southdown sheep	5	6	5	8
Second quality ditto	3	8	4	2	Large coarse calves	3	10	4	8

Prime Scots, &c.	5	0	5	4	Large hogs	4	0	4	6
Coarse and inferior sheep	3	8	3	10	Small porkers	4	8	5	0
Second quality ditto	4	0	4	6	Suckling calves...each	19	0	23	0
Prime coarse-woolled do.	4	8	5	4	Quarter old store pigs	23	0	30	0

Lambs, 5s 2d to 6s 6d.

Total supply—Beasts, 1,000; sheep and lambs, 11,320; calves, 520; pigs, 310.
Foreign supply—Beasts, 562; sheep, 2,300; calves, 315.

NEWGATE AND LEADENHALL.

FRIDAY, Aug. 17.—About average supplies of meat are on offer in these markets, and the trade generally is steady at the following quotations:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	10	3	6	Mutton, inferior	3	4	3	8
Middling ditto	3	8	4	4	— middling	4	0	4	6
Prime large	4	6	4	8	— prime	4	8	5	10
Prime small	4	8	4	10	Large pork	4	0	4	6
Veal	4	0	4	8	Small pork	4	8	5	2

Lamb, 4s 6d to 5s 4d.

HOP MARKET.

BOROUGH, Monday, Aug. 13.—The reports from nearly every district of the hop plantations are of the most unfavourable character. The vermin has done its worst, and drives a large portion of the ground into irrecoverable blight. The duty receded to 60,000*l*, but has since been backed at 70,000*l*. Our market has been very buoyant for every description of last year's growth, and prices have advanced to the following currency:—Mid and East Kents, 120s, 147s, 180s; Weald of Kents, 105s, 135s, 140s; Sussex, 100s, 120s, 147s.

FRIDAY, Aug. 17.—The accounts this morning are worse than ever from a great part of the plantations. Duty, 70,000*l*. Market active at a considerable advance in prices.

POTATO MARKET.

BOROUGH AND SPITALFIELDS, Monday, Aug. 13.—Our markets are well supplied with potatoes, in, for the most part, fair condition. The demand continues steady, as follows:—Regents, 90s to 120s; Shaws, 70s to 95s; and inferior, 50s to 65s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* 0s to 5*l* 5s; new ditto, 2*l* 15s to 4*l* 10s; old clover, 4*l* to 6*l*; new ditto, 3*l* 8s to 5*l* 0s; and straw, 1*l* 10s to 1*l* 16s per load. A slow trade.

WHITECHAPEL.—Old meadow hay, 3*l* to 5*l* 5s; new ditto, 2*l* 15s to 4*l* 10s; old clover, 4*l* 0s to 6*l* 6s; new ditto, 4*l* 0s to 5*l* 5s; and straw, 1*l* 10s to 1*l* 16s per load. A moderate demand.

COAL MARKET.

FRIDAY, Aug. 17.—A firm market to-day, with a steady demand last Wednesday's quotations being fully realised. Best coals 18s to 18s 6d; seconds 15s to 16s 6d; Hartleys and Manufacturers 12s 6d to 15s 6d. Ships at market, 34; sold, 26; ships at sea, 75.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 17.—The transactions this week are only on a moderate scale, as buyers continue to act with great caution, but there is no variation in price worth quoting.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 17.—A good attendance, and good country business in wheat at an advance of 3d per cental. Flour inactive of sale, and 1s per sack and barrel advance on Tuesday's rate. Indian corn in brisk demand. Galatz, 35s; mixed, 34s. Egyptian beans a turn dearer. Oats and oatmeal continue without alteration.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Aug. 17.—The market for manufactured iron has been quiet throughout the past week, with little or no change to note in prices. Scotch pig iron has again declined this week, and the business done has been but limited. The price of copper was on the 14th inst. reduced 4d per lb on manufactured, and 4*l* 10s per ton on unmanufactured copper. Lead continues dull. In spelter there have been more transactions at a slight advance.

The Gazette.

TUESDAY, Aug. 14.

BANKRUPTCIES ANNULLED.

J. Walker and J. Neave, Southwark bridge road, builders.
E. Wherry, Market Deeping, Lincolnshire, grocer.

BANKRUPTS.

R. Mitchell, Tunbridge wells, draper.
T. H. Harper, Abingdon, confectioner.
J. Z. Williams, Woburn chambers, Henrietta street, Covent garden, builder.
J. Thomson, High street, Kensington, and Brydges street, Covent garden, licensed victualler.
R. G. Wilkinson, Fenchurch street, ship broker.
J. Page, Toog, Shropshire, licensed victualler.
E. Wherry, Market Deeping, Lincolnshire, grocer.
J. Williams, Roath, Glamorganshire, builder.
G. Hasinck, Tetbury, Gloucestershire, ironmonger.

EPITOME OF RAILWAY NEWS.

TRAFFIC RECEIPTS.—The traffic returns of railways in the United Kingdom for the week ending Aug. 4 amounted to 588,310*l*, and for the corresponding week of last year to 549,020*l*, showing an increase of 39,290*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 265,236*l*, and for the corresponding period of 1859 to 249,727*l*, showing an increase of 15,509*l*.

GREAT WESTERN.—The capital account of this company for the half-year ending 30th of June last shows that 13,044,777*l* had been raised on shares, including 4,805,911*l* on preference shares; and 10,590,518*l* on debenture and loans, making the total 23,635,296*l*. Of the 4,805,911*l* raised on preference shares, 1,471,000*l* was at 4 per cent., 2,009,911*l*, at 4½ per cent., and 1,325,000*l* at 5 per cent. The two latter are redeemable stocks.

LONDON AND NORTH-WESTERN.—The capital account of this company for the half-year ending 30th of June shows that 36,218,290*l* had been received, including 10,283,356*l* on debentures, 312,830*l* on the 3½ per cent. debenture stock, and 1,256,813*l* on the 4 per cent. debenture stock. Interest and dividend upon the whole of the 36,218,290*l* was charged to revenue. The total expenditure amounted to 35,226,768*l*, leaving a balance of 951,522*l*.

BRISTOL AND EXETER.—The accounts and report for the half-year ending the 30th of June last have been issued. The capital account shows no variation in the consolidated stock, which remains at 2,022,460*l*. There has been an increase of 46,531*l* in the preference stock, and a decrease of 41,364*l* in debentures. A large proportion of the debenture debt became due in June last, and consisted principally of 4½ per cent. debentures, which have all been either discharged or renewed at the reduced interest of 4 per cent.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Aug. 13.—The railway market opened with increased firmness this morning, but subsequently became less strong. Foreign descriptions were dull, especially South Austrian and Lombardo-Venetian, which closed heavily at 1 to ⅛ discount. American railway securities continued in demand, and those of the Illinois Central and Michigan Central exhibited an improvement. New York and Erie shares, however, partially relapsed. Mines were inactive and showed an occasional reduction. No change of importance occurred in joint stock banks. In miscellaneous descriptions, Red Sea Telegraph shares were firmer. Victoria debentures, new, were last quoted 109¼; Canadian Five per Cents., 109½ to ¾.

TUESDAY, Aug. 14.—In the railway market the arrangements for the fortnightly settling were commenced to-day, and showed an increased supply of stock from the public on the late rise. The general tone, however, was good towards the close, especially as regards Midland, Lancashire and Yorkshire, and South-Eastern. Caledonian also improved on the announcement of the proposed dividend. In the colonial market, Grand Trunk of Canada stock and Great Western and Atlantic and St Lawrance shares advanced. East Indian was also firmer at 99½ to 100. The principal change in foreign railways was a decline in Pernambuco to 2¼ to 1½ dis. Lombardo-Venetian, on the other hand, rallied to ¼ to ¾ dis. In American railway securities a reaction occurred in the shares of the Illinois Central and New York and Erie. South Australian Government bonds were likewise quoted lower. Few transactions were recorded in mines, but prices were in general fairly maintained. Joint stock banks were rather dull.

WEDNESDAY, Aug. 15.—The railway market opened firmly, but afterwards receded, partly in sympathy with Consols and partly from the increased supply of stock brought forward by the late rise. Berwick and Sheffield were exceptionally firm. Colonial and foreign descriptions were flat, especially South Austrian and Lombardo-Venetian shares, which declined to 1¼ to 1 dis. Pernambuco and Bahia were very heavy, particularly the former, at 3 to 2½ dis. In American railway securities the shares of the Illinois Central and New York and Erie were again dull, while those of the New York Central and Philadelphia and Reading improved. There was little doing in mines, but prices were fairly supported at an occasional advance. St John del Rey were higher. Joint stock banks left off about the same as yesterday.

THURSDAY, Aug. 16.—The railway market was affected in sympathy with Consols, and closed at a further heavy decline. Midland left off nearly 2½ per cent. lower, and most of the other leading stocks about 1 per cent. Indian and Canadian descriptions were likewise flat, Grand Trunk especially receding to 29½ to 30, and Great Western of Canada to 12 to ¼. In the foreign market, Lombardo-Venetian declined to 1¼ dis.; other railways were also heavy. Mines were in very moderate demand, but in some cases exhibited an advance. No change of importance occurred in joint stock banks. In miscellaneous descriptions a reduction took place in Netherlands Land, Submarine Telegraph, and Peninsular and Oriental Steam.

FRIDAY, Aug. 17.—The transactions in the railway share market were limited; a slight improvement however took place in prices. Great Northern advanced to 117¼. London and Brighton to 110¾. North-Western to 101¾ 102; and Midland to 124½ 124¾. Caledonians declined to 93¾ 94¼. Eastern Counties to 55½ 56. North Eastern, Berwick, to 96¾ 97; and West Midland to 45¼. In the foreign market, Dutch Rhenish realised 11¼, and South Austrian and Lombardo-Venetian, 10¾. The colonial lines remained exceedingly dull. Joint stock bank and miscellaneous shares were a shade firmer.

TRADE B/P MARK.

BROWN AND POLSON'S
PATENT CORN FLOUR.

The LANCET states,
"This is superior to anything of the kind known."

RECIPE FOR SUMMER FRUIT PIE.—Boil the flour with milk for four minutes, then pour it over the stewed fruit, and brown it in the oven or before the fire. This is very lightsome and much preferred to the ordinary pie crust.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, Dublin, Manchester, and 23 Ironmonger lane, London.

DINNEFORD'S
PURE FLUID MAGNESIA
has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

DEANE'S TWO-HOLE BLACK PENS
which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"G. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.
CHEAP, LIGHT AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates
1st. It is a non-conductor.
2nd. It is portable, being packed in rolls, and not liable to damage in carriage.
3rd. It effects a saving of half the timber usually required.
4th. It can easily be applied by any unpractised person.
5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.
Price ONE PENNY PER SQUARE FOOT.
CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.
Samples, testimonials, and full instruction on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

JULLIEN FUND.
Committee Room—50 New Bond street.
The Committee of the Jullien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Jullien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind aid of those who appreciate the great services rendered by the late lamented maestro to the cause of the musical education of the English people.
The Committee confidently appeal to that benevolence for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Jullien, and at the same time afford adequate relief to his bereaved family.
COMMITTEE for the DISTRIBUTION of the JULLIEN FUND.

Mr John Mitchell	Mr W. Duncan Davison
Mr W. R. Sams	Mr Jules Benedict
Mr Thomas Chappell	Mr A. Blumenthal

HONORARY TREASURERS.
Mr John Mitchell, 33 Old Bond street
Mr T. Chappell, 50 New Bond street
Mr W. R. Sams, 1 St James's street
BANKERS.
Messrs Coutts and Co., Strand
Heywood, Kennards, and Co., Lombard street
London and County Bank, Hanover square
Who, as well as the honorary treasurers, have kindly consented to receive subscriptions.
April, 25th, 1860.

THE STUDY OF THE ARCHITECTURE of the HUMAN FRAME MADE EASY.
ANATOMICAL and PHYSIOLOGICAL MUSEUM, 3 Tichborne street, facing the Haymarket.
Unprecendented facilities are here afforded for acquiring a practical knowledge of the organisation, functions, and disorders of the human body.
Open daily, for gentlemen only, from Twelve till Five, and from Seven till Ten.
Explanatory lectures daily at Three and Eight.
Admission, One Shilling. Catalogue, 6d.
Proprietor, JOSEPH KAHN, M.D., 17 Harley street, Cavendish square, W.

VALUABLE INFORMATION.—GRATUITOUS EDITIONS of the following LECTURES, delivered at the Royal Institute of Anatomy, Science, and Medicine, 369 Oxford street, London, by W. B. MARSTON, the Principal, are being issued, with plain directions for SELF-TREATMENT and CURE in each of them.
No. I.—NERVOUS DEBILITY (the result of youthful error), loss of memory, shortness of breath, dimness of sight, exhaustion, and general incapacity. Addressed specially to Young Men.
No. II.—MARRIAGE: Its Obligations and Impediments. Addressed to those who contemplate Marriage, and to the Married who desire Children.
No. III.—THE BRAHMIN'S ELIXIR OF LIFE: Its History—Secret Remedies of the Hindoos no Fable—Full Particulars of this Extraordinary Specific—Its Amazing Powers as a Reinvigorator of the Impaired Functions, and in all Cases of Nervous Debility.
No. IV.—THE DISEASES INFLICTED UPON MANKIND BY THE GREAT SOCIAL EVIL. With a simple means of complete Cure without Mercury.
Each Lecture, neatly printed and bound, will be sent GRATIS, on receipt of two stamps to prepay postage, or THE WHOLE FOUR, BOUND TOGETHER, with numerous additions, and full directions for SELF-TREATMENT and CURE, 160 pages, 8vo, post free, for Six Stamps. Address, Treasurer, Royal Institute, 369 Oxford street, London.

Just published, price 1s; by post, 1s 1d; sealed, 1s 6d,
DR BRIGHT'S MANUAL ON SPERMATORRHŒA, &c. With Cases and Drawings from Life, &c., &c. Licentiate of the College of Physicians, Member of the Royal College of Surgeons, &c., &c.
Contents:—Modern Treatment of Diseases of the Kidneys, Bladder, Prostrate Gland—Desire for Solitude—Groundless Fears, &c.; showing how these supposed incurable maladies may be effectually eradicated by the most simple means. Published and sold by J. Allen, 20 Warwick lane, Paternoster row, London.

Free for Six Stamps.
ENGLISH, FRENCH, AND AMERICAN MODE of TREATING DISEASE.—Proving the fallacy of the former, the non-success of the other, and the unequalled efficacy of the latter, as demonstrated in thousands of cases, whereby the sufferer can easily cure himself privately, safely, and at a trifling cost, without the aid of the Faculty with their mineral poisons. The New Mode has been recently introduced into Great Britain by an eminent practitioner, who has studied in the three kingdoms, and holds from each distinguished Titles and Diplomas, including that of the National Academy of Sciences, Paris, who approve the new Self-Cure Discovery, which is sent free to any address on receipt of six stamps by the Doctor's private secretary, Wm. Hill, Esq., M.A., 27 Alfred place, Bedford square, London, W.C.

THE HUMAN HAIR
Just published, price 1d, the 76th edition of
GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included
Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

A Boon to Nervous Sufferers.
